TARCOMBE HEREFORD STUD

48th Annual Production Sale

WEDNESDAY, March 2, 2022 at 1.00 p.m.

On Property under cover
1184 Tarcombe Ponkeen Creek Road, Tarcombe

HELMSMAN BUYING SYSTEM

J-BAS 6

38 Polled Bulls

2 Horned Bulls

33 P.T.I.C. Heifers

Inspections are welcome by appointment

6 months replacement warranty on bulls,
providing veterinary certificate is obtained.
Free delivery to 100km

2% rebate allowed to outside agents introducing buyers in writing prior to commencement of sale and settling on their behalf within 7 days of notice.

*COVID 19 PROTOCOL – Tarcombe will adhere to the current protocols and restrictions in place at the time of the sale to ensure a safe and healthy environment. Limited catering will be available.

AuctionsPlus

FROM THE VENDOR

Gilbert and Patty Hayes first came to the district in 1955, when they purchased 2900 acres. The Hereford stud was established in 1967 and is now managed by their son Rob and grandson Tim; three generations of Hayes family farming at Tarcombe.

At Tarcombe we run 280 registered cows, and a commercial herd of 150 cows, which provides us with knowledge that is essential for breeding better bulls for quality commercial production. Our ultimate goal is to produce young sires that consistently leave high value, highly marketable beef cattle for the commercial producer.

Sires being used in 2022 include Wirruna Molong M010 (P), Wirruna Phil P273 (PP), Tarcombe Anzac L011 (PP), Elite Validated Q131 (PP), Tobruk Larry L5 (PP), Tarcombe Trust Q299 (P), Tarcombe McLaren Q203 (PP), Tarcombe Nockout R064 (PP), Tarcombe Homeland Q002 (S) and Tarcombe Katnook R102 (PP)

In 2021 semen has been used in the following bulls – Tarcombe Encore Q053 (PP), Tarcombe Homeland P177 (PP), Tarcombe Cadbury P181 (PP), Kanimbla Power Quest Q006 (PP), Wirruna Matty M288 (PP), Wirruna Pilot P054 (PP), Yavenvale Lottery L417 (PP), Tarcombe Katnook N024 (P), KCF Bennett Resolve G595 (PP), FTF Testimony 828F (PP), TH Masterplan 183F (PP) and NJW 160B 028X Historic 81E (P).

2021 has been a very good year with the cattle market at record levels, with an abundance of grass in Victoria and NSW. We had a successful Wodonga show and Sale in 2021 winning Reserve senior champion with Tarcombe Unique Q058 (H), he was also our high selling bull of $18000 to Ross Armstrong (Yea), 10 out of 11 bulls cleared av $9800. We also had a very successful on property sale with 28 bulls selling to av $7321 to a top of $17500 for Tarcombe McLaren Q052 to long time clients, the Kelly Family of Kilmore.

In 2021 we purchased 2 very exciting sires in Wirruna Phil P273 and Elite Validated Q131. Phil was purchased in partnership with Quamby Plains (Tas), he is a bull that has very few faults, he is very well structured, has an amazing temperament, great body length and is really easy doing. His EBVs are very well balanced with 9 traits in the top 10% of the breed. We have used him heavily in the 2021 Autumn and look forward to his first calves early in 2022.

Our other purchase, Q131, an outcross sire to our herd, has very good EBVs with his calving traits all in the top 30% and 200 wt and 400 wt in the top 20%, fertility traits in the top 10%, and all Carcass traits in the top 20%. He also has a great Phenotype with good structure, long and deep bodied and easy doing. Q131 is a bull that could be used both on heifers or cows and we look forward to progeny in spring 2022.

A first for Tarcombe in 2022 saw us contract to young Tarcombe sires to two different semen companies. The first being Tarcombe McLaren Q203 (PP) to ABS. He is also our first Herefords Australia super sire with semen being sold to many leading studs in Australia and also exported overseas. We will have the first of the Q203 calves born in early 2022 with the majority of this years sale Heifers AI'd to him. He is a very complete bull with great Phenotype and Genotype.

The other young sire that was contracted to Alta Genetics is Tarcombe Nockout R064 (PP). Nockout is a very attractive bull with really balanced EBVs with his calving traits in the top 25%, his growth traits in the top 10%, fertility in the top 5%, and CWT, Fat & IMF in the top 10%. We believe this bull is going to breed very well for us suiting the very good Fort and Molong cows that we have in our herd with the first of his progeny in spring 2022.

Both these bulls will be used naturally in our herd in 2022. We have also another young sire being put in the Herefords Australia Super Sire Program, Tarcombe Lottery R208, he is being sold at Wodonga in 2022.

Tarcombe continues to enter as many steers in carcass competitions as we can with entries in both the Lardner Park Grass Fed Steer Trial and the Southern Grainfed Carcass Classic. We like to participate so we can compare our cattle to other herds and breeds with the aim to make our herd more consistent. We also maintain a strong genetic linkage to the Hereford BIN project which helps us maintain more accurate carcass EBVs.

Our replacement heifers are selected on a good balance of EBV's focussed on calving ease, low birth weight, higher IMF and higher EMA. We still try to maintain fast early growth, good fertility traits and structural soundness and the ability to perform in our hard conditions.

We welcome you to our 2022 sale which will once again be run by the Helmsman system in the hope to reduce buyer risk and increase the chance of the right bull being purchased for the right price. As well as onsite bidding, we will be also conducting the sale via Auctions Plus, and in the event of restrictions changing due to COVID 19, the sale will be wholly run via Auctions Plus.

Photos and videos of the bulls will be available on the Auctions plus website in mid February. Inspections are welcome prior to sale day by appointment.

We hope you find a suitable animal for your needs and welcome any feedback you have to offer.

Rob & Jan Hayes

Tim & Cindy Hayes

HELMSMAN - A CLIENT FRIENDLY BUYING SYSTEM

An alternative to the traditional stud auctions is the Helmsman buying system. First used at the "Helm View" Sale in March, 1990, the design arose out of concerns that the traditional auction system served the needs of agents and vendors well but neglected the needs of bull buyers, "the customers".

It combines the best features of both the auction system and sale by private treaty: you get first pick and pay market value without any pressure:

1. Prospective buyers need to *register prior* to the start of the sale, indicating their trading details and whether or not they have been introduced by an agent. Each is given a buyer number.
2. The sale cattle are on display as usual, with all relevant Breedplan fertility and carcass information present in your catalogue.
3. A large, easy-to-read board will be located nearby, displaying lot number, buyer number and bid value (or Reserve Price).
4. Bids are written on a card and presented to either the registration clerk or a "runner", and the board is updated. A "Sale Presenter" will announce each bid as it is recorded.
5. You may open bidding on any bull at its reserve price.
6. A bid once submitted and recorded cannot be retracted, and the person submitting such bid will be responsible for it until it is overbid.
7. All cattle are for sale simultaneously for a period of 20 minutes. Further bidding will then result in one minute extensions until a full one minute "no bid" period which will conclude the sale.

THE BENEFITS

1. You have more time to consider lodging a bid. You can place genuine bids on any bull of your choice at any time during the sale period.
2. You have the opportunity to re-assess each lot during the sale period and move freely between one lot and another depending on what you could afford without any pressure to make an instant decision.
3. You take home the cattle you want, irrespective of lot order.
4. If you need more than one bull, Helmsman gives you a better chance to average your purchase costs.
5. There is a better opportunity to arrange the shared purchase of a lot if your budget is exceeded.

TERMS AND CONDITIONS OF SALE WILL BE ON DISPLAY ON THE DAY OF SALE

BULL FERTILITY

SCROTUM: Scrotal circumference is measured in centimetres around both testicles taken at the widest point. There is a direct relationship in young bulls between testicle size and semen production. Testicle size is highly heritable and is also influenced by age, breed and nutritional factors. A bull over 18 months with a scrotal circumference of under 30cm has a high probability of testicular degeneration, poor semen quality and low fertility.

PALPATION: Each pair of testicles are examined and palpated by the Veterinarian and given a score of 1 to 5. The score is based on firmness and resilience and it is used to represent testicular function. A score of 1/1 indicates a very firm pair of testicles with high resilience. This suggests that the bull's sperm should be of normal quality and free of any pathological conditions. Poor testicles that are soft and of low resilience are given a score of 5/5 and indicate very low fertility.
The scrotal circumference and palpation of the bulls for sale in this catalogue will be supplied on a supplementary sheet available before the sale commences.

EYELID PIGMENTATION

PIGMENT: The total circumference of the eyelid that is pigmented has been expressed as a percentage. The left eye is recorded first followed by the right eye. Selection of cattle with good eyelid pigmentation and well hooded eyes will help to reduce the prevalence of eye cancer within the herd.

HERD HEALTH

All bulls are treated with Pestiguard and Vibrovax as of February 2022. Bulls are protected from pestivirus for 12 months and are then to be given an annual booster of Pestigard. All Bulls have been tested for persistently infected (carriers) of pestivirus, so there will be no carriers of the virus.
Bulls have also been vaccinated with 7 in 1 as of February 2022.

All bulls are DNA tested free of any genetic conditions.
All bulls are DNA tested as sire verified.

All bulls are semen tested in February, 2022 by Drew Pickford (Nationwide Artificial Breeders)

PEDIGREE ABBREVIATIONS

There are a number of abbreviations that appear in the pedigrees of animals in this catalogue denoting the horn status for the animal.

(P) – the animal is polled

(S) – the animal is scurred. The scurred gene is independent to the polled gene and gives no indication of the level of horned or polled progeny that will result from this sire.

(H) – the animal is horned.

(HP) – the animal is horned but has polled breeding in its pedigree. If mated to horned cows, these bulls will not dehorn any of their progeny

BEEF CRC GENE MARKER TEST

HOMOZYGOUS POLLED (PP)
98% Accuracy.
Most likely 'True Polled'.

These bulls carry two copies of the Poll Gene (PP) and could genetically dehorn 100% of their progeny. The test is not 100% accurate as the location of the polled gene has not been precisely identified. The accuracy figure provides a percentage likelihood of the most likely genotype. Note that the accuracy figure does not infer the percentage of polled progeny. If you want to cease dehorning, select PP bulls.

HETEROZYGOUS POLLED (Ph)
98% Accuracy
Most likely carries the horn gene

If mated to horned cows these bulls will genetically dehorn 50% of their progeny. We have not gene tested sale bulls that are Poll but have a horned dam, these bulls are already known to be Heterozygous Polled (Ph).

HOMOZYGOUS POLLED (PP)/ HETEROZYGOUS POLLED (Ph)
Inconclusive result
Accuracy not determined

The test cannot determined if the bull is Homozygous Polled (PP) or HETROZYGOUS POLLED (Ph)

For further information please refer to www. beefcrc.com

BREEDPLAN

Understanding the EBVs, Selection Indexes and Accuracy

EBVs

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as + ive or - ive differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed. The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditoins, they can ony be used to compare animals analysed within the same analysis. Consequently, Hereford and Poll Hereford BREEDPLAN EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of *functional* animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcase merit and feed efficiency. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

CEDir% - *CE % Direct* = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

- *CE % Daughters* = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200 day weights of her calves. For dams, it indicates her milking ability.

SS - Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and thereford selection for increased scrotal size will result in reduced age at calving of female progeny.

Days to Calving EBV (days) indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicates a shorter interval from bull-in date to calving and therefore higher fertility.

CWT - Carcase Weight EBV (kg) is basd on abattoir carcase records and is an indicator of the genetic differences in carcase weight at the standard age of 650 days.

EMA - Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcase data, adjusted to a standard 300 kg carcase. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcase. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcase weight than will sires with lower EMA EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcases) and are adjusted to a standard 300 kg carcase. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcase. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcase weight than will sires with higher EBVs.

RBY - Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcase. Sires with larger EBVs are expected to produce progeny with higher yielding carcases.

IMF - Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300 kg carcase. Depending on market targets, larger more positive values are generally more favourable.

Selection Indices

Hereford selection indices are calculated for four production/market specifications, namely, Southern Self Replacing, Northern Self Replacing, Southern Baldy Maternal and Northern Baldy Terminal.

Each selection index describes a different production/market scenario and relates to a typical commercial herd using Hereford bulls. Producers are advised to use the selection index that most closely aligns to their production system. All four selection indexes are focussed on maintaining and improving eating quality. Significant premiums are applied for increasing marble score up to a marble score of 3. Pressure is also applied to early life growth to maintain low ossification scores and good MSA compliance. In addition, each selection index targets the following specifications.

Index values are reported as EBVs, in units of relative earning capacity ($'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system.

The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

Southern Self-Replacing Index - Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing straight bred Hereford herd targeting the domestic market. Daughters are retained for breeding and so maternal traits are of importance. Steers are slaughtered at 20 to 22 months of age to produce 300 kg carcases with 10 mm P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period.

Northern Self-Replacing Index - Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting the domestic market. This index is suitable for use by both straight bred Hereford herds and in crossbreeding programs where Hereford bulls are being used over a Bos indicus based cow herd (e.g. flatback). Daughters are retained for breeding and so maternal traits are of importance. Steers are slaughtered at 20 to 22 months of age to produce 340 kg carcases with 12 mm P8 fat depth. A high cost is applied for cow feed costs during the annual feed shortage period.

Southern Baldy Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd using Hereford bulls over Bos taurus females (e.g. Angus). A portion of the heifers are retained for breeding and so maternal traits are of importance. The steers and surplus heifers are destined for slaughter at 20 to 22 months of age. Steers produce 300 kg carcases with 10 mm of P8 fat depth, while heifers produce 270 kg carcases with 12 mm of P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period.

Northern Baldy Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd (e.g. flatback) using Hereford bulls over Bos indicus/Tropical females (e.g. Santa Gertrudis) where all progeny (male and female) are destined for slaughter. Steers and heifers are slaughtered at 20 to 22 months of age. Steers produce 340 kg carcases with 14 mm of P8 fat depth while

heifers produce 300 kg carcases with 17 mm of P8 fat depth.
Note that $Index values for individual animals are sensitive to the assumptions used in the BreedObject analysis to calculate the selection index.

Accuracy
Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease.
Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

Accuracy range	**Interpretation**
less than 50%	EBV should be considered as a preliminary estimate. It could change substantially as more performance information becomes available.
50-74%	Medium accuracy, usually based on the animal's own records and pedigree. Still subject to substantial changes with more information, particularly when the performance of progeny are analysed.
75-90%	Medium-high accuracy and includes some progeny information. Becoming a more reliable indicator of the animal's value as a parent.
more than 90%	High accuracy estimate of the animal's true breeding value. It is unlikely that the EBV will change much with the addition of more progeny data.

As a rule, animals should be compared on EBV's regardless of accuracy. However, where two animals have similar EBVs the one with higher accuracy could the safer choice, assuming other factors are equal.

The Hereford GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the Australian Hereford Society nor the ABRI oversee or audit the collection of this data.

BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Over the two decades, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on affect of structural improvement through out all sectors of the beef cattle industry. This structural analysis has allowed the formation of structural EBV's which are gaining momentum within the industry.

Liam Cardile of 'BEEFXCEL' structurally assesses many of the leading seedstock herds in Australia. 'BEEFXCEL' is not involved in any genetic marketing or specific breeding advice and therefore has no conflict of interests to influence their stock appraisal. The integrity of the structural data provided by 'BEEFXCEL' is recognised throughout the industry as Liam is a fully INDEPENDENT assessor.

'TARCOMBE' STRUCTURAL PROGRAM:

The 2021 'TARCOMBE' Sale Bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft. All bulls were assessed by Liam Cardile of BEEFXCEL on 26th February 2021. Please contact Liam directly if you wish to discuss the assessment system.

HOW TO USE THE BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

The Beef Class Structural Assessment System uses a 1-9 scoring system;

- A score of 5 is ideal. (Note: Temperament Score of 1 is preferable)
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of 2 or 8 are low scoring animals and should be looked closely before purchasing.
- A score of 1 or 9 should not be catalogued and are considered culls.

2022 SIRES

(A brief description – pedigree and breedplan figures following)

YAVENVALE LEGEND L329 (PP)
Legend was top price bull at the 2017 sale. He has been a very consistent breeding bull for us. His EBV's are very good – top 10% for Gest. Length, 200,400 and 600 day growth, SS, CWT & IMF. If you want to add weight to your progeny Legend sons will do it. His females are outstanding and are highly recommended. Two very good sons in this sale Lots 11 & 30.

WIRRUNA FORT F382 (PP)
Fort is becoming one of the best ever sires used at Tarcombe, he is very much a modern Hereford sire. He is Homozygous Polled (PP), a very structurally sound bull with good doing ability, a quiet temperament and his females are breeding very well producing us good progeny. His EBV's are outstanding – top 15% for BWT, Gestation length, DAYS TO CALVE and IMF. He has over 503 progeny recorded. Son N093 winning senior champion at Wodonga 2019, selling to Talbalba Herefords in QLD. Progeny comes highly recommended.
Our top priced bull at Wodonga 2020 (Q053), was out of a very good Fort daughter. Last chance to purchase a Fort son. Outstanding sons in this sale in lot 16 & 20.

TARCOMBE ANZAC L011 (PP)
Anzac has been retained for his outstanding structure, doing ability, well balanced EBV's and outcross genetics. His dam is a very attractive cow and he is sired by Allendale Anzac E114
He has become a very consistent breeding bull for us, having a large impact on our herd. With a very good phenotype, and we have used him heavily in 2020. His daughters look very good they are cows that will stay in our herd for a long time. A good son in this sale in lot 28.

TARCOMBE ACHIEVER M227 (H)
M227 was retained for his very good pedigree. His dam was a very consistent cow that stayed in our herd until she was 16 years old. He has breed leading IMF and Positive Fat. Two nice sons in Lot 39 & 40 in this sale.

TARCOMBE JACOB N030 (S)
N030 was retained in our herd for his outstanding thickness, length and doing ability. His EBVs are well balanced with moderate birth weight and good early growth and good carcase traits top 15% for CWT, EMA, FAT & IMF. Two very good sons in this sale Lot 14 being out of a very consistent breeding cow.

TOBRUK LARRY L5 (PP)
Larry was purchased as a mature sire for his great pedigree and well balanced EBVs.
His Dam D26 has been a very consistent breeding cow with over 59 progeny and still going at 14 years old. Larry's EBVs put him in the top 10% for CED, BWT, SS, Days To Calve, EMA, Fat and IMF. The first of Larry's females calved in the 2021 spring and they are outstanding he is a sire that will be a real cow breeder. 3 nice sons in this sale the pick of them are Lot 17 and Lot 38.

YAVENVALE LOTTERY L417 (PP)
Lottery was used in our 2019 AI program. He has very good EBVs top 10% for CED, BWT, Days to calve, EMA, Fat & IMF. He has bred some very consistent cattle for us with a son, R208 being our 2022 Hereford super sire nomination. Some very good sons in this sale with lot 7 being one of my pick bulls in the sale. Lottery was also used in the BIN project for 2019 which gives our herd the linkage to this very important program.

BANEMORE CADBURY M003 (P)
M3 was purchased in 2018 to join over heifers. He is sired by Mount Difficult Cadbury who has bred some very good females for our herd. M3 has very well balanced EBVs top 10% for BWT, Days to calve, CED, GEST LENGTH, SS & CWT. Cadbury has a good temperament and good structure. Some very good sons in this sale are Lots 12 & 15.

KCF BENNETT HOMELAND C34 (PP)
Homeland has breed us some very good cattle in the last few years. They are cattle that have some very good commercial traits. They are very easy doing with great weight for age and a unique carcass shape deep in the body and great muscle expression. His females are going to be outstanding with really nice udders. We have bred some nice bulls sired by Homeland with the pick of them winning intermediate champion at Wodonga in 2020 (P177), we retained semen in P177. We have also used another son in Q27, his progeny will come through our sale in 2023. One son in this sale is Lot 9.

TARCOMBE KATNOOK N024 (P)
N24 was sold at Wodonga 2019, we retained some semen in this bull because of his outstanding carcass traits, growth, good structure and good doing ability. His carcass traits are breed leading being in the top 1% for EMA, CWT, RBY, IMF, 200, 400 & 600 day wt. We have also used a son in 2021 (R102) that carries the same traits. A nice thick son in this sale in lot 6 that will boost the carcass traits in your herd.

WIRRUNA MOLONG M010 (P)
Molong was purchased in 2019 to be joined to heifers. He is an attractive bull with good thickness, sound structure, good body length and moderately framed. Molong is a bull that is having a large impact on our herd leaving us with breed leading calving traits that will be in our herd for years to come. He has really good EBVs top 1% for CED, GL, BWT, days to calve, milk , EMA & IMF. He is very much a modern Hereford bull that will leave us with moderate size cows that calve easy and rear good calves and get back in calve in any climate that have great carcass traits. Progeny come highly recommended with 8 good sons in this sale.

BEHM 100W CUDA 504C (PP)
Cuda has been used lightly in our herd. He has very well balanced EBVs top 10% for CED, BWT, 200, 400, 600, Milk, EMA, RBY and CWT. He is a homo polled son of the widely used NJW Trust. Four very good sons in this sale Lots 35, 36 & 37 being flush brothers and Lot 4 a Homo polled son.

JOINING SIRE

TARCOMBE MCLAREN Q203 (PP)
Q203 is the first bull we have in the Herefords Australia Super Sire program and we have also sold the semen rights in this bull to ABS, semen being sold to many leading studs throughout Australia. Q203 is the type of bull that we are aiming to breed in both his Phenotype and Genotype. His EBVs put him in the top 10% for CED, GL, BWT, DTC, EMA, CWT, IMF & all four Indexes also to 25% for 200, 400 & Fat. He is really well structured, has great doing ability and a very gentle temperament. His Dam is one of our leading cows producing T. Homeland P177 (Intermediate Champion 2020) and other top progeny. We have used Q203 heavily in our 2021 AI program with a majority of the sale heifers AI'd to him.
We look forward to using Q203 again in 2022 joining.
