WELCOME TO CLOVEN HILLS'

9th ANNUAL RAM SALE

TUESDAY, 4 OCT 2022 FROM 10:30AM ON-FARM AND LIVE ON AUCTIONSPLUS

**AT 450 HAYDENS RD, NAREEN
:: OPEN AUCTION IN PENS OF 3**

We are proud of the impact Cloven Hills genetics is having both for our clients and the broader prime lamb industry. Our recent analysis of the maternal database revealed 63% of the top 20 percent of sires across all maternal composite studs throughout Australia, are sired by our rams. This demonstrates the confidence industry has in our genetics and we are confident clients are getting excellent value in terms of the ranking of the genetics offered and the prices they are fetching at our auctions (\$800-11,000). We pride ourselves on helping people work out what is important to them and customizing rams to suit their objectives and budgets.

However, our job is to strive for on-going improvement by continuing to apply rigorous selection pressure and strive for continual improvement. We have been doing this in several ways. Firstly, we continue to use the best tools available to accelerate our rate of genetic gain within our flock. Secondly, we are constantly analyzing our own database and the tens of thousands of physical scoring records and measurements to select for resilience, hardiness and good physical attributes. Thirdly, we have focused on outcross sires to ensure we are providing clients with genetic diversity. Finally, we have been experimenting with improving meat eating quality and wool without compromising on the key profit drivers of fertility, growth hardiness, carcase in moderately sized, low maintenance animals.

We are therefore excited at the offering in this catalogue, as it represents a solid selection of animals, which have underpinned our business and yours, as well as an introduction of some of the animals with the new traits we have been developing.

- Kate and Chris Dorahy – Cloven Hills

**532
STUD & FLOCK
RAMS ON
OFFER**

"We had been looking at making the change from Merinos to maternal Composites for about four years; we lamb from now into September and with two falls of (rain) 60 mil's a few days apart in 2017, lambing with Merinos was very challenging."

"We spoke to Kate and Chris about what we thought we were going to buy and they did say there was plenty of options there for us."

"When the sale came, we were confident we knew exactly what we were buying and we also bought Cloven Hills ewe lambs from another long-term Cloven Hills client instead of trying to breed over our Merinos, because it would take too long to get where we wanted to be."

"With the Cloven Hills Composites, it's amazing how little feed you have to have, to run singles."

"The twins were easy ... minimal interference and probably the easiest, best lambing we've seen."

"We have also done just some basic sums on the difference between Merinos and the Composites, income-wise."

"Working it out, we ran through, just with the marking percentage, the sale of the sheep, the sale of the wool, working it back to a ewe dollar value, the Composites are ahead already."

"We couldn't be happier with where we're headed."

- Alister Woods, Craigwood, VIC

GENETIC GAIN - WHY?

Genetic gain is key to improving your on farm production.

Selecting the specific traits that will target your production objectives is important as your farm's genetic gain will mirror where you purchase your genetics.

Genetic gain is therefore pivotal to increasing on farm profitability particularly as we have cost rising in the current inflationary environment. Cloven Hills long term gain of 4 MCP⁺ index points is 74% higher than the average database gain. In actual fact it will be higher given Cloven Hills data is included in the database average with Cloven Hills contributing 10% of the LAMBPLAN maternal database (Source: Sheep Genetics April 2022).

Longevity, Resilience, Structurally Sound and Repeatable Performance

Cloven Hills 110042, starting from 2012 she has raised 2,2,2,3,2,2,2,3,3,2 lambs respectively.

This year we put her in our ET program and flushed 12 embryos and we have 11 live lambs to our top ranking sire 202127, this gives an exciting opportunity to modernise her with the

potential to keep a son or for clients to buy a high genetic merit son. She has successfully scanned in lamb to a natural join afterwards with twins that are due any day now.

She has remained structurally sound, dag free and her condition score prior to joining was 3.3. Amazing for her age. Her average efficiencies at weaning are 230% lambs and 118% of her body weight (kg lambs/kg ewe). This genetic line is well represented in our pedigrees and across many flocks nationally. Her twin brother had 711 progeny across 5 flocks. On figures she is top 20% for MCP⁺, fertility and milk.

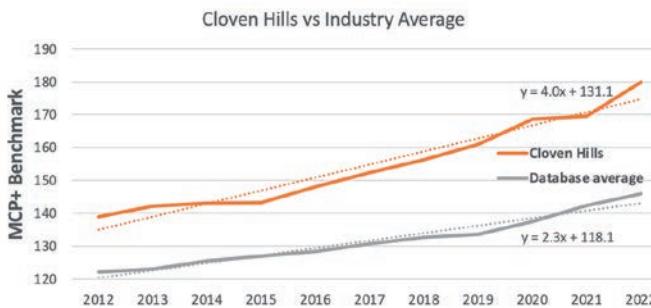

Figure 1: Cloven Hills and database average MCP+ benchmark over past 10 years from July 2022 Sheep Genetics database run. Note the 2022 benchmark for Cloven Hills is based on parent average matings and industry average is double the long-term trend

RANKED # 5: CLOVEN HILLS 2017-188

Cloven Hills 20170188 has been the best performer in our stud and has had a huge influence on the national flock with 2189 progeny including sons and grandsons in this catalogue!

He stood out from the pack even as a ram lamb, with the early classing comments saying 'Very nice, huge nuts!'. If you haven't ever been convinced about the correlation between scrotal circumference and daughter fertility, this guy will convince you. We know he breeds moderate ewes that are highly fertile and he keeps condition on his back with not much tucker and a dag score of 1!

"We are changing the structure of our sheep operation at Molka, in the past we have run around 4500 ewes, and now we are shifting to a maternal composite for ease-of-breeding, self-replacements.

"Cloven Hills was our choice for rams this year, to go over a line of 1000 composite ewes we have bought in, for their moderate frame, good reproduction rates and low birthweight, focusing on increasing that important kilogram per hectare produced."

- Ben Harrison, *The Falls Pastoral, VIC.*

Chris and Kate welcomed new client, Ben Harrison and *The Falls Pastoral*, to our Spring ram sale. *The Falls* took home 21 head, including Lot 104 who went under the hammer for \$3400.

OCTOBER RAM SALE

This year's October Ram Sale will offer 532 rams, which continue our goal of catering to a range of budgets and needs.

The top 100 rams in this catalogue average in the top 1% of the MCP+ index. The top 300 average in the top 5% of the MCP+ index. The top 400 average top 7% (MCP+ 172). Fertility and growth across the entire catalogue average in the top 20%, whilst the average PWT and AWT average 14.1 and 12.1, respectively. Average curve bend is -ve 21%, whilst average weaning percentage and ewe efficiency of all dams is 165% and 88%, respectively, highlighting our focus on very efficient animals. This meets our clients demands for moderate ewes, enabling profitable and sustainable stocking rates to optimise kg lamb per ha.

In the offering, will be sons of Australia's highest-ranking rams, including 9 by CH - 202520 (Number 1 ranked ram in the Maternal Database), as well as 16 from Cloven Hills 170188 who has had a huge impact across the whole industry. In addition, we are offering 27 sons of 191927, ranked 32. He is a good looking structurally sound, black footed ram used as an outcross sire in our program and his sons would suit buyers looking to diversify away from CH-170188. In addition, there are 3 sons of CH - 180887. The four-year old is in the top 10 sires on the maternal database with MCP+ of 192, while maintaining ASBVs in the top 10% for IMF and shear force. He is one to watch for providing desirable meat-eating quality characteristics without compromising key production and profit drivers.

Kate is available to take clients through ASBV data for rams on offer and assist with short-listing rams to suit every clients' production targets.

**BIOSECURITY (FMD): WEAR CLEAN SHOES AND CLOTHING.

- ✓ Guaranteed for 2 years (structure and death)
- ✓ Rams have full 6 in 1 history
- ✓ Rams Shorn August
- ✓ Rams Testicles have been checked
- ✓ Rams have been treated with Extinosad post shearing
- ✓ Rams have been drenched post shearing with Trifecta
- ✓ Health Statements supplied with NVD

Cloven Hills blood lambs, bred on Helen Baillie's Wesley Dale Strowan farming operation in Tassie, have hit the nail on the head for another Tassie business.

Australian family-owned meat processor, Tasmanian Quality Meats, has been buying Helen's lambs for around a year and the quality and consistency of the product sees it shipped two days, every week, to Queensland under the processor's blue ribbon label.

"We've got a premium lamb brand, Lamb of Tasmania and a normal strip brand product and the demand for our products is growing all the time ... at this stage, people can't get enough, we can't do enough," TQM livestock manager, Steven Faulkner said.

TQM was introduced to Helen's lambs last year and while at first sight, Steven was sceptical of the product, the Mole Creek-produced lambs are now a key component of the company's weekly Queensland supply.

"Mark Webb at Webb and Woodiwiss brings a nice supply of lambs to us every week," Steven said.

"He's got a large client base and when the first consignment of (Wesley Dale lambs) turned up, myself and the other buyer were there that morning.

"We looked at each other, at these little lambs ... we didn't think they'd make the weight.

"Later we looked at the computer and they were two to three kilograms heavier than they looked.

"They're a very shapey, meaty little carcase and the weight comes with the width and the quality of the meat.

"They're a very consistent weight and shape, the weight range is 22 to 23 kilograms, three or four score fat, not overly fatty, just ideal fat scores."

He said while Cressy offered "lambs galore" within a 100-kilometre radius of the TWM operation, Cloven Hills and Wesley Dale "just fits with what we do here".

"Wesley Dale has only been with TQM about 12 months and Cloven Hills was a line we never investigated too much, but once we got to work killing the product ... it was just right the weights are right, everything's right," Steven said.

"That all comes back to the quality of the genetics, the bloodline, but also the on-farm management and selection.

"We're very happy with it because we've got a guaranteed product.

"The Queensland truck needs to be loaded by lunchtime, it needs chilled to the right temperature.

"If we have a line of lambs all over the place, we need to grade more down to the chiller ... Wesley Dale is always first on the list for the Queensland kill because we know the product is going to be right."

Tasmanian Quality Meats manager, Jake Oliver, with Cloven Hills-blood lambs destined for their premium brand.

PLEASE NOTE:

* LOTS 510-520 ARE 50% WOOLUMBOOL WHITE SUFFOLK. ** LOTS 521-532 ARE 50% ANDERSON MERINO.

These animals were brought into our breeding program to get linkages across all databases (Merino and Terminal) and for specific traits, namely FEC, MEQ and wool, with a big focus on resilience. Nothing else in the catalogue has Merino in them. We are looking to keep the female progeny to infuse particular traits and so the rams are surplus to our breeding requirements.

EXPLANATION OF INFORMATION

“ Cloven Hills have adopted the MCP+ index which targets self replacing systems where fertility and growth are the main priorities. It increases PWWT by 3.1kg without increasing AWT. The new M\$ Index increases PWWT by 3.9kg but it also increases AWT by 3.5kg. This is over a 10 year period using average indexes but would be a greater increase in a shorter time using higher indexing animals. ”

Percentile bands for Maternal ASBVs are included. These are the best way to determine where an animal's individual trait compares to the entire breed using LAMBPLAN for the 2021 Drop.

ASBV DESCRIPTIONS

ASBV	Meaning	DESCRIPTIONS
BWT	Birth weight	Rams with a more negative BWT produce lambs which are lighter at birth. Benefit- join ewe lambs/maiden to lower BWT values for birthing ease.
WWT	Weaning weight	Rams with a more positive WWT will produce lambs that grow quicker @ 100 days. Benefit - more trade suckers off mum.
PWWT	Post weaning weight	Rams with a more positive PWWT will produce lambs that grow quicker @ 225 days.
AWT	Adult weight	Rams with a higher value will produce progeny with higher adult weights.
PFAT	Post weaning fat depth	Rams with a more negative PFAT produce progeny that are leaner.
PEMD	Post weaning eye muscle depth	Rams with a more positive EMD have more muscle and yield more lean meat.
SF5	Shear Force	Shear force is a measure of the force or energy required to cut through the loin muscle of a lamb after 5 days of ageing. Rams with more negative SF5 produce lambs with more tender meat.
LMY	Lean Meat Yield	Rams with more positive LMY produce lambs that have higher lean meat yield percentage at slaughter.

ASBV	Meaning	DESCRIPTIONS
PWEC	Post weaning worm egg count	Rams with a more negative WEC have a higher genetic potential to resist worms.
PSC	Post weaning scrotal circumference	Rams with more positive SC produce more fertile daughters.
WR	Weaning rate	Rams with a more positive WR will produce daughters that wean a high number of lambs per ewe joined.
YWR	Yearling Weaning Rate	Rams with a more positive WR will produce daughters that wean a higher number of lambs per ewe joined as yearlings.
MWWT	Maternal weaning weight	Rams with more positive MWWT will produce daughters that wean heavier lambs. This is sometimes called "Milk" as it is an estimate of the female's progeny's potential for, milk production and ability to provide a better maternal environment.
DRESS	Dressing Percentage	Rams with more positive dressing percentage produce lambs that have higher Lean Meat Yield percentage at slaughter.
IMF	Intramuscular Fat	Intramuscular fat is a measure of the chemical fat percentage in the loin muscle of a lamb and is often referred to as marbling. Rams with more positive IMF will have higher levels of intramuscular fat.

NOTES ON LOT LISTINGS

Figures shaded black represent top 5% ASBVs.

Grey boxes with bolded numbers represent top 10% ASBVs.

Grey boxes represent top 20% ASBVs.

Shaded Sires of rams are in the top 150 Sires in the maternal database.

BWT ASBVs of 0.4 or less (shaded grey), are generally suitable for ewe lambs/young ewes. We use 0.4 without any trouble (over ewe lambs that grow to a mature weight of 65kg). However 0.3 and less is desirable if you have smaller framed ewes.

More efficient ewes are better for increasing stocking rates. Stocking rate efficiency of the dam is calculated using Cloven Hills raw data. For the lifetime of the ram's dam, we have put the average kg she has weaned as a percentage of her body weight.

Similarly we have also given the average percentage of lambs the ram's dam has weaned for her lifetime. This is also Cloven Hills raw data, and we have included the dam's birth year. For younger ewes it will be less accurate.

This year we have DNA tested 26% of the 2021 drop rams.

All 2018, 2019 and 2020 ewes are genotyped plus 43% of 2021 ewes and some of the 2016 and 2017 ewes.

We have also included a column to indicate which of the tested rams have the GDF8 gene for muscling. Some rams have one copy and some have 2 copies. If you are wanting to increase lean meat yield this may be of interest.

Wool:

The wool score is the average of 3 scores taken. 1 = Downsy, 5 = Open. For a self replacing flock 2.5-3.5 is ideal.

For ewes 3.5 is preferred to ensure fleece weight, openness and easy care. An ideal lamb pelt is 2.5.

Wool Micron:

Micron was collected from the mid-side at post-weaning age. Micron varied from 24 μ m to 43 μ m with an average micron of 33.1 μ m. Raw micron and deviation from average are displayed. These measurements will be entered into Sheep Genetics to create ASBVs for the future.

Dag Score:

1 = Clean 2 = Minor 3 = Moderate 4=Dirty 5 = Very Dirty

Abbreviations:

CH = Cloven Hills, CO = Cashmore Oaklea, WO = Woolumbool,
AN = Anderson, LP = Lambpro, IN = Inverbrackie

In this drop there has been a strong focus on outcross of sires within the Cloven Hills sire team that aren't related to CH 170188 to ensure genetic diversity.

Weaning Rate (WR):

Weaning rate (WR) is defined as the number of lambs weaned per ewe joined, and is expressed in the units of 'lambs'. It is replacing number of lambs weaned (NLW).

Weaning rate is calculated using the component traits conception (CON), litter size (LS) and ewe rearing ability (ERA) by accounting for the economic value on each of these traits at different flock litter sizes. For example, consider two rams, one with a WR ASBV of 0 and the other with a WR of 0.5. As rams make up half the genetic merit of their progeny, the ram with a WR of 0.5 will have daughters who on average wean 0.25 more lambs per ewe joined, than the daughters of a ram with a WR of 0.

ASBVs:

The ASBVs in this catalogue are based on the Sheep Genetics run from the 1st September 2022.

THERE ARE ASBVs AND THERE ARE ASBVs!

By Dr Tom Granleese

ASBVs are the solution of a mathematical equation where an estimate of the true genetic merit of an animal is calculated for a given trait. Performance = Genetics + Environment. These mathematical equations do an excellent job of minimising the "white noise" (environment) out of performance. Capturing white noise comes at an expense. This includes birth type and rear type, management grouping, age of dam, age of lamb, full cohort submission etc. Once as much white noise is accounted for, we can then use performance on an individual and relative as well as pedigree (genomic and/or declared) to then estimate a breeding value.

ASBVs can be estimated by not declaring different management groups or collecting some pedigree. However, there is extra bias in these ASBVs as begin to come hard to trust particularly on animals who do not have progeny recorded. The Animal Genetics and Breeding Unit (AGBU) who are responsible for calculating ASBVs developed a Data Quality Score (Guy et al. 2021) as benchmarked against all other breeders in each analysis. Sheep Genetics released these scores for each breeder in May 2022.

Cloven Hills have a Data Quality score of 5 stars or in the 93rd percentile in the analysis (Figure 2). That ranks them second best. Given Cloven Hills are recording over 3500 progeny annually, this is no mean feat! At sale time you can be confident that the utmost care has been made so the data can contribute to the best possible estimate of an animal's true genetic merit.

Screenshots of Sheep Genetics Data Quality Score for Cloven Hills (July 2022 analysis)

SHEEP GENETICS

Weaning rate replacing the old number lambs weaned

Recently, Sheep Genetics, as part of their database upgrade have used science to improve the estimation of genetic merit of a ewe's ability to wean a lamb(s). The old breeding value for this was the number of lambs weaned (NLW) ASBV. The breeding value for NLW has now been replaced with the weaning rate (WR) ASBV. [Swan and Bunter \(2021\)](#) demonstrated that weaning rate is an improvement on NLW which can lead to more targeted genetic improvement for weaning more lambs. Weaning rate (like NLW) is a sub-index. The weaning rate ASBV is a sub-index with economic weightings on conception (CON), litter size (LS) and ewe rearing ability (ERA) ASBVs. Weaning rate essentially reaches the same outcome as NLW, but with more accuracy and allows more genetic improvement.

How does weaning rate ASBVs compare with number of lambs weaned ASBVs?

Table 2 below displays percentiles from pre analysis

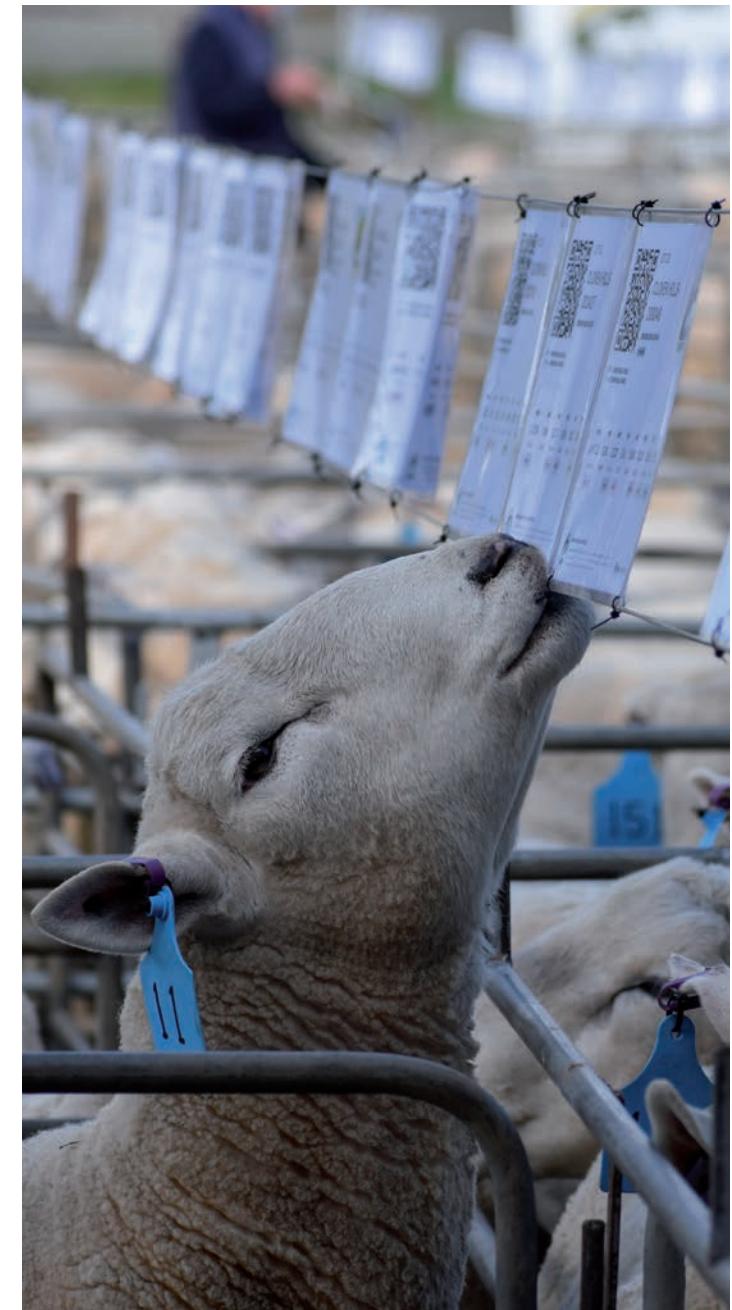

Table 2: Percentile table for MCP+ index, YNLW, NLW from December 2021 and MCP+, YWR and WR from July 2022 for maternal database 2021 drop – source: *Sheep Genetics*

Percentile	MCP+_DEC21	MCP+_JULY22	YNLW_DEC21	YWR_JULY22	NLW_DEC21	WR_JULY22

Top 60%	129	125	0.08	0.33	0.07	0.11
Top 70%	125	116	0.06	0.30	0.05	0.08
Top 80%	121	107	0.04	0.26	0.03	0.05
Top 90%	114	103	0.01	0.21	0.00	0.00

enhancements and post-analysis enhancements. We can see there is much more variation in Yearling Weaning Rate (YWR) when comparing to the old YNLW. This is the same for mature NLW and WR. With more variation (larger extreme values), and similar economic weighting on the MCP+ index, we can observe that we also get more extreme valued percentiles in the new analysis.

When new breeding values are released or analysis enhancements are made, it is always a smart idea to refamiliarize yourself with the percentile table to give proper context of where an animal benchmarks across industry. With Sheep Genetics recently redeveloping the database, a tune up of percentile is highly recommended.

A further recommendation for ram buying clients is to do a stocktake on your current ram team. Have their ASBVs changed with the recent database upgrade? Are there any rams not aligning to your breeding objective? Are the rams you are short-listing going to progress your ram team average with your breeding objective in mind. [RamSelect.com.au](#) is an excellent tool to access updated breeding values on your ram team.

HOW THE SALE WILL OPERATE

OUR SALE WILL AGAIN
BE STREAMED LIVE ON

THE ENTIRE SALE WILL BE RUN 'PICK OF THE PEN' – WHERE THE WHOLE PEN WILL BE OFFERED AND THEN SOLD AS A CHOICE OF TAKING A PARTICULAR LOT OR THE WHOLE PEN.

You can pre-enter your maximum bids for desired lots or individual rams or join the live bidding. You can also view our online catalogue, including photos and videos of each individual ram offered, prior to sale day.

PLEASE USE THE FOLLOWING CHECKLIST TO ENSURE YOU ARE SET UP CORRECTLY:

- ▶ **Register at least 48 hrs prior to the sale** (allowing time for the weekend of 2nd-3rd October and Public Holiday in NSW (Monday 4th October), when back-office support may be limited.)
- ▶ Upgrade your account to buy livestock including:
 - PIC
 - ABN
 - Contact Details
- ▶ View catalogue to evaluate rams:
 - <https://auctionsplus.com.au/auctions/sheep/cloven-hills-2021-ram-sale/76704>
- ▶ Set the Maximum Bid for the Lot you are interested in, if you intend to use the "Auto-bid" facility.

If you have any questions on sale day please call the Auctions Plus office on **02 9262 4222** or send an email to studsales@auctionsplus.com.au

Please don't hesitate to call Kate on **0409 784 340** if you have any other questions.

TO ENSURE YOU ARE BIDDING ON AND BUYING EXACTLY THE RAM OR RAMS YOU HAVE SELECTED, PLEASE TAKE A QUICK LOOK AT THE FOLLOWING SLIDES

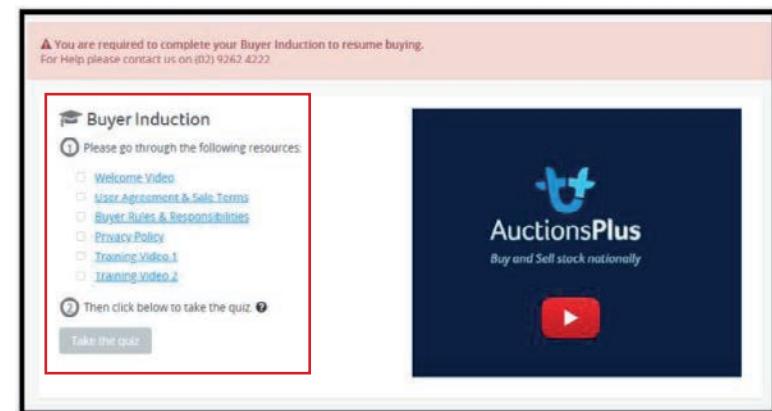

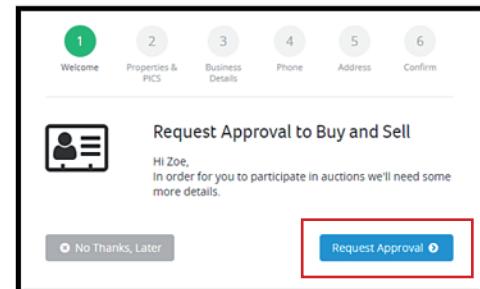

TO REGISTER:

Please note, you are required to sign up to AuctionsPlus and register to bid on this sale, at least **48 hrs before sale day**, allowing time for the weekend of 1st-2nd October and Public Holidays in some states on Monday 3rd October.

1. Select 'Sign Up' to create an account
2. Fill in your details, create a password and press Sign Up
3. Confirm your account via an email from Auctions Plus (be sure to check your junk mail if doesn't appear within a few minutes.)

Upgrading your Account to Buy Livestock

1. Select 'Dashboard'
2. Select 'Request Approval to Buy'
3. The pop-up on the right will appear, press '**Request Approval**' in blue.
4. Fill in the required details including PIC number, ABN and contact details.
5. Once you have reviewed and confirmed the details entered, you will be required to complete the 'Buyer Induction'. This is a mandatory step in registering as a livestock buyer, and you should allow at least 30 minutes to progress through the material.

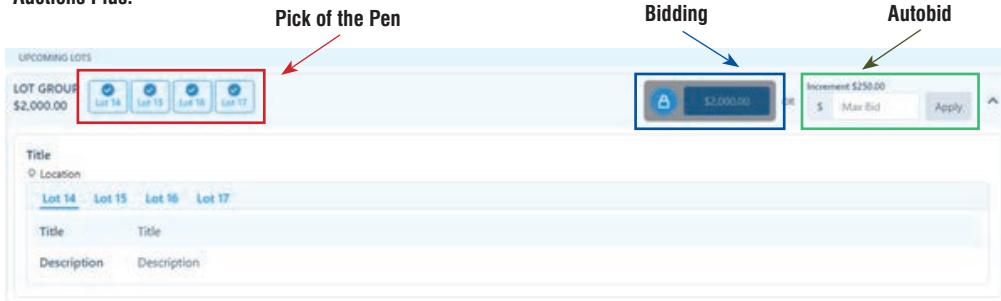

6. Once you have completed and 'ticked' all resources, you will be able to take the quiz.
You must achieve 100% on the quiz to be approved as a buyer.
If you get an answer(s) incorrect, you will be able to re-take the quiz.
7. Once you have completed the quiz, Auctions Plus will confirm your details and approve your registration. This can take up to **48 hours**, please contact Auctions Plus if there are any issues. The Auctions Plus team will contact you, if they detect any issues.

PICK OF THE PEN BIDDING

- ▶ Rams will be offered in Pens of 3 and sold as "Pick of the Pen".
- ▶ Once you are a fully registered bidder, you can make your selections once the auction is open.
- ▶ Information on each lot number is published on the website and you can view each ram by clicking on the lot number (highlighted in red, Figure 1)

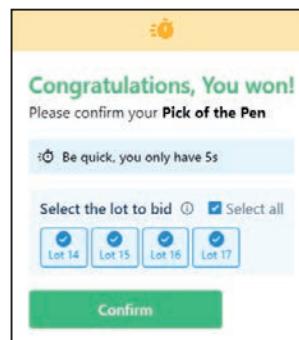

Figure 2. Screenshot highlighting areas for Pick of the Pen, placing a bid and using the Autobid facilities in Auctions Plus.

To make your selections, click on the lot numbers of the rams you would like to bid on

- ▶ To enable bidding, you MUST click on the padlock item, beside the blue price tag, to 'unlock' bidding (highlighted in blue, Figure 2).
- ▶ The current highest bid for the animal will appear in the blue price tag
- ▶ The required increment for bidding is listed to the right of that and you can enter your bids in the box, underneath that – you can enter your bids here, or enter a max. bid you are willing to pay for that animal.
- ▶ Your bid will be highlighted in green, if it is the highest bid, it will turn red, once you have been outbid
- ▶ **Once bidding ends, If you are the highest bidder you have 5 seconds to confirm your selection.**
 - You may select to purchase all Lots within the group/pen or make a selection.
 - **NOTE: If you do not select any lots within the 5 seconds all lots within the pen will be sold to you.**
- ▶ Once the selection has been made, the remaining lots within the pen shall be offered for sale.
- ▶ You will see throughout the sale which lots you have bought.

AUTO-BIDDING

An auto bid is placed after the auction has commenced, allowing you to set a maximum price on any lot(s) during the auction, to which the computer will then bid on your behalf.

The advantage of an auto bid, is that you can determine what the starting price is and then set your maximum price or, set the auto bid if the auction is still running.

We also recommend considering the use of an auto bid during an interfaced sequential auction. When a sale has a physical component as well, the lots can be sold very quickly and using an auto bid is the best way of enabling Auctions Plus to relay the bid to ensure it is accepted by the auctioneer.

Auctions Plus highly recommend that you watch the Auction to ensure your bids are on the correct increment, and that you are not outbid by another bidder.

An auto-bid does not guarantee you will be the successful bidder at your set price.

To place an auto bid;

1. Log in to Auctions Plus
2. Connect to the Auction
3. Find the Lot you are interested in
(ensure you have read the full lot details before bidding)
4. Use the Auto-bid box to type in your max. price (highlighted in green, Figure 2).
5. Click "Apply" to save.

****NOTE: Your auto bid only applies to the lot you have selected. It does not apply to any other lots. Moreover, your auto bid will only be successful if you win the Pick of the Pen at the first round of bidding - ie. your auto bid is no longer valid after the first round of bidding, even if your desired lot remains active in the pen. If successful, you will still need to confirm your selection with 5 seconds.**

SALE INFORMATION

SELLING AGENT

Nutrien Casterton, 13 Henty St, Casterton VIC 3311
Rick Smith 0447 770 339 | rick.smith@nutrien.com.au

3% Rebate to outside agents

SELLING METHOD

Rams auctioned in pens of 3.

Auction will be run "Pick of the Pen"

FREE DELIVERY

Free delivery is available locally, SA (inc. Kangaroo Island), TAS, NSW, WA and other destinations by arrangement. **If you would like your rams delivered please call Kate Dorahy prior to the Auction to assist with smooth organisation of rams post sale.**

RAM SALE ASSISTANCE & INSPECTION

All rams presented on our OPEN DAY, Thursday 22nd September 2022.

Please let us know if we can assist with selection and short lists. Lunch provided.

SEmen RIGHTS

Cloven Hills (T/A CM & CG Dorahy) retains the semen rights to all sale rams. Cloven Hills reserves the right to collect semen at their cost, from any ram sold, at a mutually convenient time. Clients may collect semen for their in-flock use only.

COVIDSAFE PROTOCOLS FOR CLOVEN HILLS RAM SALE & OPEN DAY

OUR OPEN DAY AND AUCTION WILL OPERATE IN ACCORDANCE WITH OUR COVIDSAFE PLAN – THE FULL PLAN IS AVAILABLE UPON REQUEST, BUT WE ASK GUESTS TO OBSERVE THE FOLLOWING BASIC PRINCIPALS, AS RECOMMENDED OR REQUIRED BY VICTORIAN HEALTH:

ATTENDEES MUST:

1. carry a face mask and wear it (indoors or outdoors) where you cannot physically distance
2. register immediately upon arrival
3. do not attend if feeling sick or unwell
4. adhere to physical distancing (1.5 metres)
5. cough and sneeze into tissue or elbow
6. practice good hand hygiene using the sanitising products available
7. use the designated rubbish bins for any wastes

Food and drink will be provided by accredited catering businesses according to their Covidsafe plans. AuctionsPlus provides an alternative for purchasing for people who are unable to attend.

WHAT OUR CLIENTS SAY

CLOVEN Hills' genetics is a permanent fixture at TA Field Estates' Aberfeldy property at Holbrook, New South Wales.

A self-replacing operation supplying large volumes of lamb to commercial processors, Aberfeldy runs around 10,500 ewes – 3000 first-cross and 7500 Composite ewes – maternally joining around 4500 Composite ewes, annually.

"We wanted to reduce the genetic and phenotypic variation in the ewes," Aberfeldy manager, Rob Lindon said.

"We had growth and fecundity, now we need it on a moderate framed adult ewe that is structurally correct."

"We ran an in-house trial, bought a sample of 20 rams from three, high-indexing studs.

"While the other studs all performed well, in the progeny weaned onto the truck, the Cloven Hills rams produced a more consistent lamb, a really even line of offspring."

From that trial, Cloven Hills continued to tick all the boxes for the Aberfeldy operation.

"Putting Cloven Hills rams over our ewes, we've been getting around 170 per cent scanning, weaning around 140," Rob said.

"We're getting a more consistent and repeatable item, with evidence in the feedback from the processor to support it.

"While the yield varies through the growing season, the early stuff is 50, 51 per cent."

One-on-one service for every Cloven Hills client is a priority to Kate and Chris, to ensure individual budgets and production needs are catered for – another 'big tick' for Rob and Aberfeldy

"Due to Covid we haven't been to Cloven Hills yet, but Kate, Chris and the kids have all been here, personally delivering our rams," Rob said.

"Kate takes the time to talk about what we're seeing on the farm, what direction Cloven Hills is headed in terms of breeding objectives and how that might line up with our own production targets now and in the future."

"We have plenty of discussions with Kate around selecting sires for our ewe base; with the emphasis Kate puts on structure and feet ... the extra work in measuring and collecting data, we end up with the results, on farm.

"There's less animal health requirements ... while the first-cross ewes are still very responsive to drenches, they're a fair way behind the Composites, we drench them a lot less than the first-crosses.

"We've got a lot of confidence in Cloven Hills data collection and results ... it just ticks all the boxes."

With around 75 per cent lambing complete for the season, Rob said the results were "looking spectacular" once again and while the property was seeing a higher number of multiple births, the work gone in to preparing the ewes and paddocks for lambing was keeping the workload to a bare minimum.

"We're having another fantastic season, the weather is good, the pasture is good, the lambs are looking spectacular and lamb survival has been excellent with very minimal lambing interventions," Rob said.

"The Composite ewes are spectacular mums ... we work hard to keep the weight off the adult ewes through the early parts of pregnancy, which can be a battle, but they're fitter and stronger during lambing, milking really well and able to do a much better job on their lambs."

"The big thing for us with these rams is their doing ability and the fertility for us; we've got ewe lambs that are lambing really easily and they've got lots of lambs, the numbers are really good.

"They're 14 months old – the mothers – and they're having 150 per cent lambs; it's just unbelievable.

"It's a bit early to judge properly, but the singles marked so far this year have lambed at 92 per cent – the odd ones lost lambs, but we're pretty happy.

"The Cloven Hills Composites, they're good doing sheep and we're really happy with the lambs.

"We don't go around them every day, we try not to disturb them too much and we run the singles in fairly big mobs and we only have about one or two per cent pulled, so we're pretty happy with where we're at."

- John Lewis, Nerrin Nerrin, VIC.

NERRIN Nerrin's Anna Ponder with Kate and Chris, Harry, Rupert and Bridie, our Nutrien Ag agent, Rick Smith and Lot 190, one of 25 purchases by the south-west pastoral group - a long-time client - at our 2021 Spring Ram Sale.

WHAT OUR CLIENTS SAY

"We have a lot of farming enterprises that run large numbers of ewes here in Tasmania, under high stocking rates, so the Cloven Hills genetics is leading the way in stocking rate efficiencies."

"That moderate adult weight is a market 'must', but an OH&S issue as well for sheep handling and the benefits in those respects, of using the Cloven Hills genetics, is certainly recognised.

"We are seeing a clear swing away from traditional Border Leicester/Merino flocks with the larger producers running either a Merino or composite flock in large numbers because of the ease of management and availability of genetics.

"That trend won't change (and) ... (Tasmanian producers) trust (Cloven Hills') performance."

- *Mark Webb, Webb and Woodiwiss, TAS.*

Tassie agent and client, Mark Webb and business partner, Reg Woodiwiss, Webb and Woodiwiss Livestock Marketing.

WITH volume and fast-tracking genetic gain at the top of his wish-list, Peter Young found perfect solutions to the needs of his family's Glen Collin Pastoral Company in an article from 'The Land' and our Cloven Hills genetics.

"I read an article in The Land in the sheep pull-out one day, looked at the (ASBVs) ... they were what we wanted," he said.

"Specifically, we saw that the Cloven Hills genetics could help us get ahead with our production goals.

"I like how 'efficient' the Cloven Hills genetics are – much lower adult weight with growth still as good, or better than most."

His research saw Glen Collin purchase both mature rams and ewe lambs from Cloven Hills and with Glen Collin's 2021 drop of lambs "some of the better ones we've seen, despite the weather", the Cloven Hills genetics works well for the pastoral company's business and management requirements.

"They're very hardy, which suits us down to the ground," Peter said.

And at our last Summer ram lamb sale, Glen Collin added to its Cloven Hills stock, taking home 15 ram lambs.

This year, Peter and wife Anna have branched out, starting their own prime lamb operation and in establishing GCM Grazing, the Youngs have followed the old adage, 'if it ain't broke, don't fix it', with Composites their breed of choice.

"What I've got now is 2000 mature ewes and 800 ewe lambs, Composites," Peter said.

"Our country's quite high rainfall, because we're Summer wet, it's quite hard on sheep, higher worm burden, potential for foot problems.

"The Composites are just easy management, we can breed a sheep to withstand a higher worm burden, they're not as susceptible to fly strike.

"The lambing ... the mature ewes do it all themselves and the ewe lambs, depending on the season, but really don't have many issues, need minimal help.

"And the breed is so efficient, that small adult weight, good-growing lambs.

"Obviously we want to run things at a high stocking rate, lots of ewes per hectare to get that maximum kilos of lamb per hectare ... the aim is to run eight ewes to the hectare ... we have confidence, with these genetics that we can do all that."

As well as assisting with ease of management, the Glen Collin and GCM Grazing stories also demonstrate one of Cloven Hills' key aims for our clients – an offering of animals to suit a wide variety of budgets, as well as stages and types of production.

"In the past with bigger company, we finished 70 per cent of lambs to go to processors (in Tamworth or Woolworths) and sold a portion of ewe lambs every year that were not joined or scanned dry," Peter said.

INSURANCE

RAM SALE HERE

“ Cloven Hills rams are unique in that Kate and Chris not only recognise the importance of figures, but also assess and select for type, wool, feet and structure. They recognise farmers have plenty of things to spend their money on and are therefore offering 532 rams to ensure clients are again getting excellent buying value”, *Rick Smith, Nutrien Casterton.* ”
