STUD HISTORY

Avonside Merino Stud was founded in 1990 at the family property "Avonside" near Berridale. The stud moved to its new home "Muniong" between Cooma and Adaminaby in 2010. Our aim to produce large framed, structurally sound sheep, capable of consistently producing heavy fleeces of fine-medium wool remains unchanged. Over the years we have reduced adult fibre diameter to 18 -19 micron, whilst still making gains in both wool cuts and bodyweights.

Emphasis has been placed on wool quality, which must be stylish, well nourished, long stapled with superior handle and measurements. We believe that this blend of fine-medium wool, combined with high body and fleece weights is consistently the most profitable.

The fantastic loyal support from our clients continues to drive our passion to breed and offer functional and profitable merinos. It gives us the confidence to invest in industry leading genetics, both through AI and the purchase of new sires. We were excited to be able to purchase the \$20,000 top price ram at Cottage Park last year and are confident that his tremendous bone, barrel, and carcase measurements combined with a great skin and wool, will continue to drive our flock forward and further enhance the profitability of our genetics. Industry leading genetics have been sourced from studs including Roseville Park, Langdene, Tara Park, Yarrawonga, and Cottage Park to ensure that we are producing rams that breed true to type, heavy cutting profitable merinos.

FABSTOCK

LIVESTOCK VITAMIN / MINERAL SUPPLEMENT

Fabstock is a Vitamin/Mineral supplement in granular form providing livestock with cost effective health and production benefits all year round. The following mixes provide your livestock additional nutritional requirements for any grazing situation from fattening lambs in a feedlot situation through to ewes lambing down on stubble. The basic Fabstock ration was formulated over 25 years ago by well known Western Australian nutritionist Peter Harvey and has been improved over time using the latest nutritional research and ingredients.

LACTATION PASTURE MIX

This mix is for sheep and cattle before and after pregnancy. Containing higher levels of Calcium, Magnesium and Phosphorus. This mix will help in the prevention of Grass Tetany and Pregnancy Toxaemia. This mix will also increase weight gains for livestock grazing winter pastures and cereal crops.

FEEDLOT MIX

This mix is designed for sheep and cattle to obtain maximum body weight gains in a feedlot situation. As well as providing all essential Vitamins, minerals and trace elements Fabstock Feedlot mix also contains buffers and Bovatec to help control acidosis and promote healthy growth levels.

KICK START

This mix is designed to assist in the stimulation and development of the immature weaner rumen therefore helping in the prevention of weaner setbacks. Kick Start contains all the necessary Vitamins and minerals needed to keep your weaners going forward and aid in the build up of the immune system. Dextrose and Bovatec aid in the early growth of your weaners

RAMBOOSTER

A special mix designed by Peter Harvey to assist stud breeders in obtaining maximum body growth while assisting in improving nourishment and quality of wool in their young rams

STUBBLE MIX

Stubble mix is designed to obtain maximum production from low value dry summer feed such as cereal crop stubbles and dry natural pastures. With the use of methionine, Sulphur, Urea and Vitamin D your livestock's appetite for dry feed can be stimulated and this feed can then be converted into higher protein levels.
