# *Welcome*

We wish to welcome you to the first sale we are hosting at 'Retallack' Aria Park, presenting genetics from both Bauer and Retallack Border Leicester Studs.

Our focus has always been and will remain on producing quality rams for commercial breeders. We are always pleased to see sheep sired by our rams doing well at sales. The success of our clients at 1<sup>st</sup> X Ewe sales across many regions is how we measure our success.

2022 has offered the opportunity to show and benchmark our sheep against other leading studs across Victoria and South Australia with tremendous success, showing at Australian Sheep & Wool Show, Bendigo National Show & Sale and Adelaide Royal. We took out Junior and Grand Champion Ewe at all three shows, Interbreed Long Wool Ewe together with Reserve Junior & Reserve Champion Ram at Adelaide Royal.

Purchasers will find both Bauer and Retallack genetics well represented throughout the sale. We are very pleased with the quality and consistency of the rams on offer and they present as a very even group. Whilst we have data available our main focus is on structurally correct, ready to work rams. All rams are Stockscan and micron tested, with figures available closer to the sale date on our website and on the day.

**All sheep offered are Brucellosis Accredited (S82/47), 4th generation OJD approved vaccinates and the only sheep run on our properties are the two studs.** As always complimentary delivery is available numbers permitting.

We wish to acknowledge Graham's contribution to the Border Leicester breed and thank both Graham and Isabella for entrusting us with their life's work.

Thank you for your interest in our genetics and support of both Bauer and Retallack Border Leicester Studs.

Kind regards

**Jamie & Tracey Buerckner Family**

# STOCKSCAN

Scanning for performance traits in animals has become a significant on-farm measuring tool for many years.

Australian Stockscan Services P/L scanners assess sheep at around 8–12 months of age for:

- *Live Weight (LW)*
- *Eye Muscle Width (A)*
- *Eye Muscle Depth (B)*
- *Fat Depth (C)*
- *Eye Muscle Area (EMA) is calculated using the eye muscle width (A) and depth (B) measurements ( $A \times B$ ).*
- *Eye Muscle Area (EMA) to Live Weight (LW) ratio calculated.*
- *Meat Index Live Weight measurement.*

The meat index formula is based on the eye muscle width (A), eye muscle depth (B) and fat (C) measurements. A higher predominance is given to eye muscle width (A) because it is more heritable while eye muscle depth (B) is influenced by environment factors. Fat (C) is penalised slightly. The resulting number is then adjusted for the age of the sheep, so the index is what the sheep's index would have been at eight months of age.
