FIRGROVE POLL

Situated 25km east of Hamilton, the Firgrove operation is first and foremost a commercial enterprise.

We aim to breed a balanced merino where muscle and fat provide the engine to support a productive, stylish white fleece on a fast growing, early maturing deep body.

Our genetics target and capture the markets of lamb, mutton, surplus sheep (through fertility) and wool.

Resilience is bred into our sheep through carcass traits along with worm resistance to get them through

the tougher periods and aid in lamb and weaner survival.

Scoring breech wrinkle, breech cover and dag has allowed us to move to a non-breech modification, giving us an RWS accreditation

We use ASBV's along with rigid visual classing and a full pedigree to select animals fitting these criteria.

The Firgrove adult clip averages 18.5 micron and runs under a winter stocking rate of 16DSE/ha. An animals ability to survive and thrive under these conditions is vital.

ASBVs

GROWTH TRAITS

PWT Post Weaning Weight

YWT Yearling Weight

The higher these numbers the quicker your weaners will grow. Crucial for turning wether lambs off and optimizing maiden conception

CARCASS TRAITS

YEMD Yearling Eye Muscle Depth

YFAT Yearling Fat Depth

These are the doing ability indicators for your weaners and the engine room for your ewes. Our objective is to have a ratio of 2 EMD to 1 FAT

Increasing **EMD** will shift lean meat yield from the low value forequarter to the higher value loin plus improving dressing percentage. Higher EMD will increase lamb conception, plus other benefits of CV improvement, worm resistance and capping adult body weight.

Increasing **FAT** will round up your sale wethers. Fat becomes particularly important with your ewe flock under tough conditions the benefit you will see will be increased lamb survival – 1mm fat equates to 5% increase in lamb survival. Also they will be better able to cope with restricted nutrition over summer meaning less live weight loss.

WOOL TRAITS

YCFW Yearling Clean Fleece Weight

YSL Yearling Staple Length

YFD Yearling Fibre Diameter

YDCV Yearling Coefficient Variation of Fibre Diameter

The higher **YCFW**, the more wool the progeny will cut.

The higher **SL**, the longer the progeny's staple will be. SL indicates how fleece weight is achieved (through increased skin or staple length).

The lower **FD**, the lower the progeny's micron will be. For our environment, 0 is around 19mic.

Lowering **DCV** will reduce the likelihood of fleece rot and body strike in the progeny.

ASBVs

WELFARE TRAITS

- YWEC** Yearling Worm Egg Count
- EBWR** Early Breech Wrinkle
- LDAG** Late Dag

Rams with more negative **WEC** produce progeny who have a higher genetic potential to resist worm burdens. Selecting sheep with a lower

EBWR score have a lower susceptibility to fly strike. Where breech modification has ceased, sheep with lower breech wrinkles are much easier to manage

Higher reproduction is a great free lunch for plainer bodies and barer breeches.

LDAG is a visual score trait of how much dags are present. It is one of the indicator traits for susceptibility to fly strike.

Combining YWEC, EBWR and LDAG can significantly reduce fly strike and reduce the reliance on a breech modification.

REPRODUCTION

- WR** Weaning Rate

Rams with more positive **WR** will sire daughters that will wean a higher percentage of lambs

WR consists of CON (Conception), LS (Litter Size) and ERA

- ERA** Ewe Rearing Ability

It is important to cross reference what is contributing to the WR. ERA is the ewes contribution to keep the lambs alive. Energy wastage can be high if LS is not backed by ERA which is the conversion from potential to reality.

Data Quality Score: 84.8

CLASSING

We work with Dr Mark Ferguson and Darren Gordon (0408 114 656) at neXtgen Agri who are helping us through the use of ASBV's (Australian Sheep Breeding Values). Breeding a well-balanced animal between growth, carcass and wool. This is done alongside rigid visual assessment for structural soundness and looking for an animal with a deep barrel and square back end with width and depth through the twist. Andrew Howells (0418 846 291) has stepped in to take the lead in the visual classing.

2022 SALE TEAM

- Lot 1 - 47 are July 2021 Drop, Lot 48-50 are end of August 2021 Drop
- Shorn May 2nd 2022.
- Fleece information is from the current fleece taken end of August
- Guidair vaccinated as lambs, this vaccination program has been in place since 2004
- Brucellosis Accredited free. Cert 3315
- Unmulesed - Tail docked only
- Lot 1 - 6 have had shed treatment and present bigger and have tested more positive in their micron.
- Lot 39 & 40 are out of ewe lambs.
