History of Induro White Suffolk Stud

Induro was established when Guy received 10 ewes for his 10th Birthday. He used the profit from these ewes to build up his numbers by purchasing ewes from PLG.

From this foundation he Registered the Stud in 2003.

At the end of 2019 we purchased the entire Lauridale White Suffolk stud from Max & Trudy Treweek.

We started Showing our sheep in 2005 at the Australian Sheep & Wool Show and Sheepvention in Hamilton. We have also been involved in the Bendigo Elite Show & Sale since its beginning. More recently we have started attending the Adelaide Royal Show as well.

Over the years we have had great success in the Show & Sale ring selling Rams up to \$8500 and Ewes up to \$4000.

We have been Most Successful Exhibitor at the Bendigo Elite (2018)

Champion Interbreed Group 1 Ram & 2 Ewes Sheepvention (2019)

Had numerus Champion rams & ewes over the years.

ULTRAWHITES

As some of you might know we have started a UltraWhite stud here at Induro. UltraWhites are a shedding breed that was developed in WA using about 75% white dorper and 25% poll dorset. We have done this because of our concern about the current state of the shearing industry and believe that in the future some of you might decide it is just easier to have sheep without wool. We have chosen the UltraWhite because of the hardiness of dorper in tough years and the extra muscling and better structure of the poll dorset. It is also compulsory to be a member and enter your sheep in sheepgenetics to be a registered breeder which gives it an advantage over other shedding breeds. At this stage we only have a very limited numbers of UltraWhite x White Suffolk rams available but with the use of embryo transfer we hope to build up our numbers of pure breeds as quickly as possible. If you are interested in going down this path please come and have a chat so we cater for your needs in the future.

Lambplan

All lambs are recorded at birth and then weighed at weaning (100 days old) They are then weighed again and scanned for eye muscle depth and fat depth at post weaning (170 days old) by an accredited scanner. These results combined with their pedigree and some genomic results are used by sheep genetics to give us an estimated breeding value on all traits. This year we have included the eating quality figures in the catalogue as some abattoirs are starting to pay a bonus for IMF.

The highlighted boxes are for traits that are in the top 1% ,5% ,10% and 20% of all terminal bred rams in the 2021 drop.
