In September 2022 we inspected the Valley Vista ram group. The goal of this is to provide a pre-sale fertility assessment of individual rams, so that their clients can be confident that rams purchased should be fertile, functional and ready to work. To our knowledge the protocol undertaken is leading the sheep seedstock industry in doing more rigorous fertility assessments as a baseline for all rams pre-sale.

Each ram is examined for several fertility traits, which have all been recorded with the rams individual ID and are available to buyers if needed. These traits include scrotal circumference, testicle tone and palpation of structures associated with the testicle, penis examination (which in general has not been practiced by industry to date), teeth assessment including jaw alignment, and leg and feet assessments.

Fertility assessment is a single point in time activity. The vendor has done everything possible to provide rams that are ready to work. However, we strongly advise that once the ram is home and settled, it is wise to check them before their first joining, and EVERY year 6-8 weeks pre-joining. A lot of work is expected of rams, and their functionality is paramount to your flock's fertility. They are a high value animal, but only if they are in working order. Please don't let them get over-fat, aim to keep them in body condition score 3, look after their feet, practice good biosecurity, be aware of Brucellosis risks, and have an accredited veterinarian assess their reproductive potential each year, so that EFFECTIVE rams are being put to work.

Please feel free to call with any questions or if further information is required.

Regards, Tom Graham

Look no further than Valley Vista

If you are looking for Poll Dorset rams which will produce lambs for every market then you should look no further than the Valley Vista stud. The Valley Vista Poll Dorset stud was founded in 1976 and moved from its original home at Burrumbuttock, New South Wales, to Coolac, NSW in 1990. The stud was expanded in 1991 when Valley Vista stud principals Andrew and Donna Scott purchased the entire Meadow Creek stud from the late Ernie Britt. There was further expansion for the stud in November 2006 when the Scotts purchased 550 ewes and stud sires from the Gererdan stud, which at the time was among the top studs in Australia. In 2008 Joe, James and Luke Scott founded the Valley Vista Park stud with the purchase of 18 stud ewes at the Kismet dispersal sale. We have continued to add to the genetic base over the years with purchases of genetics from the Armdale, Armdale Park, Tattykeel, Hillden, Kurralea, Graythorn, Springwaters and Derrynock studs.

When selecting rams for their stud's breeding program we have placed emphasis on traits such as ease of lambing and high growth rates. We also place emphasis on producing a well-muscled and structurally correct sheep. One of the main selection criteria is selecting for high growth rate. All lambs are weighed at weaning and then twice more at thirty day intervals. These weights are converted to grams/day. Lower than 300 to 350 grams/day are culled. The stud also scans all rams, using Stockscan, for muscle area and individual data on each animal. Scans are also combined with further data recorded on-farm to produce up-to-date Lambplan figures.

The family and the flock continue to grow with an increased number of stud lambs hitting the ground this year, building numbers up on the back of consecutive good seasons. We've also increased the number of on-property sales, adding a January auction and including ewes in the offering. What has decreased is the age we are turning off rams, moving more in-line with their clients needs and industry markets. A majority of the rams offered at Valley Vista are now 12 months old or younger, which has been well received by their commercial clients, a majority of which use them over Merino ewe flocks. The younger aged rams now give clients a better opportunity to utilise the very best genetics. It also gives them a chance to see the early development of the sheep, which is what they are after when breeding for the sucker lamb market.

Valley Vista held its inaugural summer sale in January 2022, offering 2021 spring-drop rams at just nine to 10 months, as well as a selection of mixed-age scanned-in-lamb stud ewes. The results achieved from both were above expectation, and showed it was a step in the right direction - we sold a total clearance of 38 ewes to a top price of \$3600, averaging \$1978, and all 88 rams for an average of \$2685, topping at \$4600 twice. The strength of ewe sale was a particularly strong vindication of Valley Vista's breeding objectives, and sire selections, with most SIL to their new \$32,000 ram Tattykeel 200240.

Valley Vista has been involved in the Poll Dorset Research Flock, Bowan Park, for the past few years, and in 2021 nominated our homebred sire Valley Vista 200086, as well as a sire we purchased in 2018 and have used widely in the stud, Tattykeel 170400. The trial collected carcass data from 12 lambs per sire in 2021, including intramuscular fat (IMF) levels - a measure of the chemical fat percentage in the loin muscle of a lamb, and the visible marbling. IMF impacts the eating characteristics of lamb, including flavour, juiciness, tenderness and overall liking. The two rams entered by Valley Vista in the Bowan Park trial sired lambs with the highest average IMF percentages of the cohort - 4.77 per cent and 4.98 per cent. The industry mean average at the time of collecting the data was 4.3 per cent. Valley Vista also has two sires in this year's Bowan Park cohort, in Valley Vista 210006 and Valley Vista Park 210002, and look forward to seeing their results.

Recently we attended the NSW Dorset Championships, taking out supreme exhibit with their senior and grand champion ram, Valley Vista 210155, as well as grand champion ewe with Valley Vista 210010, and champion mixed pair with VV 210155 and VV 210151. VV 210010 went on to be supreme Poll Dorset exhibit at the Australian Sheep and Wool Show, where Valley Vista also exhibited the champion and reserve champion mixed pairs. Our outstanding show season culminated in exhibiting the grand champion ewe and ram at the Australasian Dorset Championships, with the ram, VV 210155 being sashed supreme exhibit. We then went on win Champion of Champions ram with VV 210155 and Champion of Champions ewe with VV 210010 - a competition where all grand champions from major shows across the country are eligible to compete.

Sire Summary 2022

VV140138 (Fyfe): Another Son of the great VV38-09. Producing a very exceptional line of progeny. Supreme Poll Dorset Ram at AS&WS 2015.

VV170058 (Mitchell): Champion Ram NSW Dorset Championships and Champion Ram Australian Sheep and Wool Show. A T90/14 son. A very impressive young sire that over the years we hope will breed a sought after line of sons for our clients.

VV180493: One of Andrew's favourites bred at Valley Vista, very impressive structure and balance, with topline and clean points that the Poll Dorset industry is after.

VV180064: Reserve junior champion at the Melbourne Royal as a lamb, which proves his early maturity and growth at a young age was impressive. A big, long ram.

VV190514: A son of TAT400-17, retained for structural correctness, this is his first crop of sons but keep an eye out over the years for many more as he has bred exceptionally well already. Low-birth weight sire.

VV190493: By SW250-27, this is another low-birth weight sire. He's a clean pointed ram that has also bred exceptionally well in his first season at Valley Vista.

VV200086: Retained sire from the 2020-drop, son of Derrynock 33-18. A high indexing fast growing sire that was used as a ram lamb and kept on at Valley Vista after impressive results in the Bowan Park trial and lambs on the ground at Valley Vista.

VV200086: A Derrynock 33-18 son. Early maturing, heavy boned, high indexing sire which was used at Valley Vista as a ram lamb before being sold at our 2021 on-property sale.

Tattykeel 140090: Purchased to continue our Tattykeel family. Was an outstanding ram lamb weighing 85kg at 5 months old. Champion Ram Lamb Australasian Dorset Championships 2014.

Springwaters 160066 (Pocock): Insert show history. Used as an AI sire to pack a punch, has bred deep carcass and heavy boned sons.

Springwaters 170250 (Taz): Has been a very impressive Sire producing a stylish, fast maturing very sound line of offspring.

Tattykeel 170400 (Martin): 1st June Drop Ram Australasian Dorset Championships. His line of sons in the sale will catch your eye and will suit both First-Cross and Merino operations.

Derrynock 180033: Purchased for \$19,000 for his high indexing LambPlan data and impressive growth PEMD, and overall index.

Hildden 190110: AI Sire. Insert show history. Has produced sons with presence and length, worked very well at Valley Vista at his first joining.

ASBVS and Indexes explained

What are ASBVs?

ASBVs are the units of measurement LAMBPLAN use to analyse animals. Australian Sheep Breeding Values are an estimate of an animal's true breeding value based on pedigree and performance recorded information. They are essentially a projection of how that animal's progeny will perform for a range of traits. Indexes combine important production traits into one number and are a useful way to rank animals quickly and easily.

ASBV types

Birth Weight (BW)

ASBV is based on measured birth weight of lambs adjusted for age of dam. Where birth weights are not available it is estimated as a correlated trait from weight measurements taken as the lamb matures. The lower the ASBV the lighter is the estimated progeny birth weight potential.

Weight (WWT) (PWWT)

ASBVs describe the animals' genetic merit for growth rate. A positive ASBV means the animal is genetically faster growing. Weight ASBVs are available for weaning (100 days), post-weaning (200 days), and yearling, hogget and adult ages.

Fat Depth (PFAT)

ASBVs describe the value of an animal's genes for fat depth at a constant weight – a negative ASBV means a genetically leaner animal.

Eye Muscle Depth (PEMD)

ASBVs describe the value of animals' genes for eye muscle depth at a constant weight – a positive ASBV means a genetically thicker muscled animal, and one that will have slightly more of its lean tissue in the higher-priced cuts.

TCP Index

The TCP index has been created to assist producers to achieve both gains in their major production traits, such as post-weaning weight and muscling, as well as ensuring consumer satisfaction from lamb is maintained through focusing on key eating quality traits such as shear force (tenderness) and intramuscular fat (marbling).

Intramuscular Fat

Intramuscular fat (IMF) is a measure of the chemical fat percentage in the loin muscle of a lamb and is often referred to as marbling. IMF has been shown to have a significant impact on the flavour, juiciness, tenderness and overall likeability of lamb. Rams with more positive Intramuscular Fat (IMF) ASBVs produce progeny with higher levels of intramuscular fat.

Valley Vista Charolais

Ultrasonic Rib Eye Muscle Scanning In Live Sheep

Fig 1 - Exposed 12th rib on the carcass cut through the last thoracic

Meat Index

The meat index formula is based on the eye muscle width (A), eye muscle depth (B) and fat (C) measurements. A higher weighting is given to eye muscle width (A) because it is more heritable while eye muscle depth (B) is influenced by environmental factors. Fat (C) is penalised slightly. The resulting number is then adjusted for the age of the sheep to get an index.

NOTE:

- Current Live Weight = C/LW
- Eye Muscle Area (EMA) is calculated using the eye muscle width and eye muscle depth measurements.

S R S

SCOTTS RAM SHEARING

Efficient, modern shearing.

NO SEDATIVE

No sedation is required as the machine handles the animal. Sheep can walk straight back into the paddock. A more cost effective solution for farmers.

SPACE

The trailer is 2.2m wide and 3m tall, fitting through most gates and can be set up by hooking onto any race that is available.

EFFICIENT

No shearing shed required. No stress for the sheep in shearing shed, no stress for the farmer.

SAFE

The ShearEzy machine handles large sheep with ease, resulting in less stress for the sheep, shearer and farmer.

PRESENTATION

Scotts Ram Shearing Trailer is perfect for Stud sheep, taking extra care on presentation.

BIG OR SMALL JOBS

10 rams to 200 rams, there is no job too big or small for the trailer.

0402 744 255

5 Back Station Crk Rd, Gundagai 2722

ABN

87 707 788 648

Semen Available

Valley Vista 210006

- Used heavily in the stud and will be retained
- Currently in the Bowan Park Research Flock Progeny Trial

TUBELINE WRAPPER

Looking for a cost effective way of wrapping silage?

- 40% cheaper than individually wrapped bales
- Easier to feed out and less plastic used
- Stores silage effectively for at least two years
- Wraps up to 80 bales of silage an hour
- Bales can still be transported with plastic on

SCOTT'S SCANNING

PREGNANCY SCANNING OF SHEEP

ULTRASONIC SCANNING ALLOWS YOU TO

- Identify singles, twins & dries
- Manage mob by ageing lambs to split early and lates
- Increase twin survival
- Manage twin bearing ewes to rejoin in good condition
- Select twins as replacement stock
- Sell dry sheep early and free up feed
- Reduce deaths from Pregnancy Toxemia
