Welcome,

Brewerbeef, is proud to offer this year's draft of bulls at our 7th annual sale.

2022 brings exciting changes to BrewerBeef both in the way we sell our bulls and the make up of our sale. This year the bulls be sold via open cry video auction.

We also have introduced an excellent line of angus bulls to our sale. Henry has taken the lead and we have purchased a number of Angus females to form the basis of our new Angus stud under the banner of Koetong Angus. This year's draft of Angus bulls were sourced from a strong line of Irelands Angus cows to really kick start our journey into Angus.

Judy's (David's mum) beautiful herd of Sylvandale Traditional Simmentals has been continued since her passing and this year's bulls were so exciting we decided to bring some of the best into our annual sale. We will have 8 traditional and red bulls in the line up.

We are located in beautiful North East Victoria across 3000 acres at Tallangatta Valley and Koetong. Our combined family operations runs 900 stud Simmental and Angus females and commercial SimAngus females. We are invested in breeding seedstock that perform under commercial conditions and find the best way to benchmark that is have the commercial herd run along side the studs.

At the recent January Wodonga Weaner Sales we achieved some of the best results on the day with our Simmental-cross weaners. We made the decision to sell the weaners early this year due to the jump in prices on the first day of the annual sales. Due to this our calves were only 7-8 months old. The tops of the 26 Simmental-Angus and Red Angus steers made \$2350 (367kg, 640c/kg) while the second pen of 19, 313kg, same breeding, made \$2240 (716c/kg).

But it was the lightest pen that was the highlight, with the 11, 7month old calves off our first calf heifers, the 282-kilogram Angus-Black Simmental steers making \$2210 or 784c/kg to be one of the 2nd highest cents a kilogram rate for the weight category in the whole of Victoria for the week.

Another wonderful year has seen the continuation of ever increasing beef prices and favourable seasons. Many of our clients have again enjoyed sale topping results and are easily achieving their most profitable drafts in years.

Our focus is breeding bulls to produce grower cattle to go into grass fed markets, we concentrate on growth, as our clients will attest to the weight for age of BrewerBeef blood cattle are exceeding expectations. Our other focus is increasing fat and IMF in our cattle to guarantee your progeny finish better and earlier.

Every year we are very proud of our sale draft of functional bulls bred to perform. Each bull has been through our thorough screening process and we are very happy to present a line of bulls which will do the job for you.

We look forward to presenting our 7^h sale draft and assisting you to maximise your profits on February 18th 2022

David, Tara, Austin & Henry Brewer

Sale Details

LOCATION: 401 Soldier Settlers Rd, Tallangatta VIC

- From Tallangatta, head towards Corryong for 13k turn right into Tallangatta Creek Rd, in 3.3k right into Soldier Settlers Rd. 'Lynn Ridge' is 1.1k, 1st driveway on right. BrewerBeef signs are located on each turn.

SALE DAY SAFETY: All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances. However, there are inherent risks associated with handling cattle.

Visitors Enter the cattle pens at their own risk.

Children must NOT enter the yards.

People entering the pens are at risk of injury. Be especially alert for bulls fighting. We do not expect the bulls to be aggressive with people, but sale day places extraordinary pressure on them as they experience an entirely foreign environment.

Remember the quietest bull is in fact an unpredictable animal.

Please do not crowd the bulls or loiter inside the pens.

Safety Disclaimer: The owners, employees and representatives of BrewerBeef accept no liability for any accidents that may occur at the BrewerBeef sale complex.

SELLING SYSTEM: In 2022 we will have a change in the way our bulls are sold.

- Sale of animals will be conducted under the Open Cry System via video auction and interfaced with Auctions Plus. All animals are sold exclusive of GST.

PHONE BIDDING: Phone bidding can be arranged prior to the sale by contacting Cameron Hilton – Corcoran Parker on 0419 578309

HEALTH: All bulls have been vaccinated with Pestigard[®], Vibrovax[®] and Ultravac[®] 7in1 They have been drenched with Cydectin. All have been pestivirus tested Negative and Tallangatta Vet Clinic has assessed each bull for reproductive soundness, semen analysis and structural soundness. Bulls are from a JBAS6 property.

INSURANCE: We recommend you insure all animals purchased against injury and death.

DELIVERY: Free Delivery within 200km of Tallangatta. Stock awaiting delivery will be held free of charge for up to 14 days of the sale at the buyer's risk. Please complete your delivery instructions and arrange transport with David at the conclusion of the sale.

CATERING: Lunch and refreshments will be available.

ACCOMMODATION: There is a motel and 2 Pubs in Tallangatta that offer accommodation or Albury –Wodonga is a 40 min drive from the sale barn.

GUARANTEE: We always provided full replacement guarantee against fertility and genetic faults. It is important that we are contacted as soon as possible to rectify any problem.

Disclaimer: All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor, selling agents or publisher make no other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation on the information included in this catalogue.

Caring for your new bull

On arrival at their new home, it is important that you have a suitable mob of animals to greet the bull to minimise the bulls stress. Remember they are leaving the security of a large mob, they have **never been alone** and will be arriving in unfamiliar surroundings. Steers or pregnant cows would be suitable, certainly not other bulls.

At BrewerBeef, we handle our cattle quietly and strongly subscribe to calm cattle handling methods, we always give our cattle respect, and our cattle respect us. They are used to being handled using ATV/side by side vehicles, The bulls have never been handled by dogs or horses. Gradually introduce them to dogs or horses with your existing cattle so they are not spooked by the new situation.

Handle your new bull quietly, confidently and with respect and he'll settle into his new home well and will be easy to handle whenever the need arises.

Our temperament guarantee will NOT apply to bulls who have not been handled within these guidelines.

NOTICE TO ALL AGENTS & BUYERS

SALE REBATES

We urge you to settle on the day - either by cheque, or by EFT that night, and receive the 2% discount on offer - do the sums, not only does it make sense, it saves you dollars!

- 1.** A rebate of **4%** will be paid to all agents who attend this sale with or on behalf of their client(s) and settle within 7 days.
- 2.** A rebate of **2%** will be paid to all agents who introduce their client(s) but do not attend this sale, and settle within 7 days.
- 3.** A rebate of **1%** will be paid to all agents who settle within 7 days, but do not introduce their client(s) or do not attend this sale.
- 4.** A discount of **2%** will be given to all buyers who do not settle through an agent, and pay in full on sale day.

PLEASE NOTE: ONLY ONE OF THE ABOVE FOUR CLAUSES CAN BE USED ON ANY ONE LOT.

**Agent introductions direct Cameron Hilton – Corcoran Parker on 0419 578309
chilton@corcoranparker.com.au**

AuctionsPlus

How to Register and Bid on AuctionsPlus

1

Go to www.auctionsplus.com.au to register at least 48 hours before the sale.

2

Select "**Sign Up**" in the top right hand corner.

3

Fill out your name, mobile number, email address and create a password.

4

Go to your emails and confirm the account.

5

Return to AuctionsPlus and log in.

6

Select "**Dashboard**" and then select "**Request Approval to Buy**".

7

Fill in buyer details and once completed go back to Dashboard.

8

Complete buyer induction module (approx. 30 minutes).

9

AuctionsPlus will email you to let you know that your account has been approved.

10

Log in on sale day and connect to auction.

11

Bid using the two-step process – unlock the bid button and bid at that price.

12

If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

Email: info@auctionsplus.com.au

Beef Class Structural Assessment System

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on effect of structural improvement throughout all sectors of the beef cattle industry.

Jim Green and Liam Cardile of 'BEEFXCEL' service many of the leading seedstock herds in Australia.

'BEEFXCEL' is not involved in any genetic marketing or specific breeding advice and therefore has no conflict of interests to influence their stock appraisal.

The integrity of the structural data provided by 'BEEFXCEL' is recognised throughout the industry as Jim and Liam are fully INDEPENDENT assessors.

Sale Bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft. Brewer Beef sale bulls were assessed by **Liam Cardile** of BEEFXCEL.

How to Use the Beef Class Structural Assessment System

The Beef Class Structural Assessment System uses a 1-9 scoring system

- A score of **5** is ideal (Note: Temperament Score of 1 is preferable)
- A score of **4 or 6** shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program
- A score of **3 or 7** shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal
- A score of **2 or 8** are low scoring animals and should be looked at closely before purchasing
- A score of **1 or 9** should not be catalogued and are considered culls.

In these everchanging times our wish is for you to feel comfortable buying your bulls. This year we will be operating under COVID-safe guidelines.

The sale will be run in conjunction with Auctions Plus online and phone bidding is also available, if you feel it's not safe for you to travel to us on sale day.

You are most welcome to arrange an inspection of the draft at any time convenient to you by calling David on 0419 275 686 or Tara on 0419 600 527.

Please register when you arrive at BrewerBeef, follow social distancing guidelines and feel free to use hand sanitiser as much as you please.

SIMMENTAL BREEDPLAN - Understanding the EBVs and Selection Indexes

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs). In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups. EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed. The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait. Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, Simmental GROUP BREEDPLAN EBVs cannot be validly compared with EBVs from any other BREEDPLAN analysis. EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, and carcass merit. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving. - **CE % Dir** = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age. - **CE % Daughters** = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination and hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Carcass Weight EBV (kg) is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 650 days.

Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

Selection Indexes

Simmental selection indexes are calculated for four market specifications, namely, Domestic Maternal, Export Maternal, Northern Terminal and Vealer Terminal. These Indexes relate to typical Simmental herds in temperate Australia targeting these specifications. Indexes are reported as an EBV, in units of relative earning capacity (\$s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system. More information is available on selecting animals using a selection index.

Domestic Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 60-70 days). Steers are marketed at 430 kg live weight (240 kg HSCW and 6 mm P8 fat depth) at 14 months of age. Daughters are retained for breeding.

Export Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the export trade. Steers are finished on grain (e.g. 120 days) and marketed at 700 kg live weight (380 kg HSCW and 8 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

Northern Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (e.g. Brahman cows) targeting the export trade. Steers are finished on grass and marketed at 630 kg live weight (345 kg HSCW and 12 mm P8 fat depth) at 28 months of age. This is a terminal production system therefore no daughters are retained for breeding.

Vealer Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the vealer trade. Vealers are weaned and sold at 8 months of age weighing 350 kg (195 kg HSCW and 6 mm P8 fat depth). This is a terminal production system therefore heifers are not retained for breeding purposes.
