Yavenvale Kruger Q538 (P)
Top priced bull 2021 Yavenvale Sale
Sold to Melville Poll Herefords, Vasey, VIC and
Bowen Poll Herefords, Barraba, NSW for \$34,000

Welcome to Yavenvale

Our 23rd annual sale will be held on Wednesday, 16th February at 1pm.

This is the most exciting group of bulls offered for sale at Yavenvale. The depth in quality is the best we have catalogued. We have increased the number of bulls for sale after the tremendous support we received selling bulls both at our sale and privately in what was an enormous year for our stud in 2021. There are now more Yavenvale bulls than ever before out working across Australia.

This sale will once again be the biggest single vendor whiteface bull sale this autumn selling season. With numbers comes choice – bulls to suit both heifer and cow joinings, EBVs and indexes that are breed leading, bloodlines from across Australia and the world and bulls that will breed a type for a whole range of target markets.

This year's sale bulls are sound, functional, commercially relevant sires with natural thickness and doing ability - tremendous consistency from Lot 1 to Lot 141.

Some of the features of the 2022 sale team:

- ***Our highest number of homozygous polled bulls with 109 – the most available at an on-property sale this autumn***
- ***Our best average IMF EBV of +1.5, 3x breed average***
- ***Our lowest average birth weight EBV of +4.0 = below breed average***
- ***The entire catalogue has a birth EBV less than 10% of their 400-day growth – real curve-benders to increase profitability***

In November 2021 we artificially inseminated 620 females, our biggest spring program to date. The 243 R heifers that were inseminated are an extremely impressive group of females – they look a picture and the EBVs are breed leading. These are the sisters to the spring drop bulls in this sale so you can be confident of the maternal potential of the 2022 sale bulls.

Genetic gain for several traits has been both consistent and significant for a number of years now in our herd. Utilising genetics from across the globe as well as the top bulls bred here at Yavenvale has driven improvement year-on-year. We run a considerable number of both stud and commercial breeders and with the recent purchase of an additional 108 hectares to a total of 2070 hectares, this will continue our herd expansion.

The cattle we consign to the Teys Grasslands brand allows us to benchmark individual animal and therefore sire line performance. As our MSA indexes continue to climb, this shows the benefit of using Breedplan EBVs as a selection tool in breeding better cattle. This “real world” performance means we are certain the 2022 sale bulls have the genetics to boost your herd's profitability.

To assist in bull selection we highly recommend the video preview of the sale bulls that is online at our new website www.yavenvale.com.au from late January. The sale will be interfaced with AuctionsPlus allowing producers unable to attend the sale to bid online.

*We welcome a phone call to arrange inspection of our cattle and look forward to seeing you during Stock and Land Beef Week **Open Day (Thursday, 27th January)** and **Sale Day (Wednesday, 16th February)**.*

Kind Regards

James and Nicki Pearce

Pat Pearce

Sale Arrangements

VIDEO & CATALOGUES:

Catalogues can be viewed online at www.yavenvale.com.au

A pre-sale video of the sale team will also be available on our website from late January.

INSPECTION:

The sale team can be inspected from 10am on sale day or Thursday 27th January, 2022 from 9am – 6pm during ‘Stock and Land Beef Week’. Prior arrangements can be made with the vendor.

ACCOMMODATION:

Motels at Tumut, Batlow, Wagga and Tumbarumba.

PAYMENT:

Term payment can be arranged by contacting the vendors. These terms may interest late winter/spring joiners in particular.

REBATE:

- A rebate of 5% will be paid to all agents who attend the sale with or on behalf of their client(s) and settle within 7 days of date of invoice.
- A rebate of 1% will be paid to all agents who do not attend the sale but introduce client(s) and settle within 7 days of date of invoice. Introductions should be in writing or email and can be sent to the vendors or livestock.gtsm.nsw@raywhite.com at least 12 hours prior to the sale.

ONLINE BIDDING:

The 2022 sale will be interactive online through AuctionsPlus. This will allow prospective purchasers to bid on our sale bulls via the internet and the bid to be received ringside at Yavenvale. For more information visit www.auctionsplus.com.au

PRE-SALE BUYER REGISTRATION:

On sale day collect your bid card which will have all of your details correct. Go to www.raywhitegtsm.com.au and click on the “online rego button”, fill out the form and press send. Cut off time is 10am Tuesday 15th February to pre-sale register.

PLEASE NOTE: Registration on sale day is still available as normal.

INSURANCE:

We recommend bulls to be insured against injury and death. Mackenna Powell from WFI will be present on the day.

GUARANTEE:

All bulls sold are guaranteed fertile. This condition is valid only for a period of 12 months after date of sale and the vendor receives notification of infertility, not caused by injury or illness, together with a certificate from a registered veterinarian on or before that date. In the event of an animal failing to breed, a credit equal to the full purchase price minus salvage value will be given at the following sale.

HEALTH:

All Yavenvale sale bulls have passed a breeding soundness evaluation (fertility and structure) by vets from the Holbrook Veterinary Centre.

All bulls have had the following treatments:

- Drenched with Cydectin Long Acting and Nitrofluke for worms and fluke (we recommend another drench in May 2022)
- Vaccinated with 7-in-1 (we recommend booster in May 2022)
- Vaccinated with Vibrovax to help prevent infertility and abortion in cattle caused by vibriosis (we recommend booster in February 2023)
- Vaccinated with Bovilis MH + IBR to help prevent penile infections in bulls caused by the genital form of infectious bovine rhinotracheitis (IBR) virus.
- Administered Selovin to boost selenium blood levels. To avoid selenium toxicity we recommend that bulls don't receive any further selenium supplementation before August 2022.
- Blood tested proving they are not persistently infected with Bovine Viral Diarrhoea Virus (BVDV) (also known as Bovine Pestivirus)

Yavenvale's Johne's Beef Assurance (J-BAS) Score is 6.

PENILE INFECTIONS IN BULLS:

Penile infections are a common disorder in young bulls in their first joining season following introduction to a new herd. A range of bacterial, viral and other organisms (“bugs”) cause these infections with the most common being the genital form of infectious bovine rhinotracheitis (IBR) virus.

Any given property has its own population of “bugs” and if the new bulls have had no exposure previously to these bugs they may develop a penile infection early on in the joining. These penile infections can be severe with the bulls developing a reddened inflamed penis, often with pustules or ulceration on the surface and will stop the bull serving due to the pain.

If bulls with active infection are detected (red and inflamed penis) they should be isolated from females and treated with antibiotics and anti-inflammatory medication. Oxytetracycline antibiotic therapy is one treatment recommendation.

In some cases, penile infections can cause extensive swelling in the prepuce and the condition can look like the bull has a broken penis or sheath injury. These bulls if treated promptly may regain normal function.

Penile infections are transient and bulls usually recover after 3-4 weeks. If undetected this type of disorder can cause a huge decrease in conception rates and possible permanent infertility in the bull in a small percentage of cases. Affected bulls may continually mount cows without serving. A sound healthy bull should serve every one or two mounts.

Pre-exposure of the bulls by joining them to a small number of females (usually empty cows that won't be retained in the herd) is one method of ensuring young bulls have maximum immunity to the bugs on a property. At Yavenvale we have vaccinated the bulls twice with Bovilis MH + IBR as this will also aid in the prevention of penile infections.

Achieving satisfactory pregnancy rates is essential in running a profitable beef enterprise. For this reason the joining period is one of the most critical times of the year. The bulls and cows need to be observed regularly to identify any problems and address them as soon as possible.

Please feel free to discuss any bull issues with us. We always have bulls available as replacements to help cover any injuries or problems your new bulls may experience.

HEIFER BULLS:

There are a number of bulls that we believe would be suitable to join to heifers. This selection is based on a combination of actual birth weights, birth weight EBVs and the bull's structure. They have been marked **H** in the comments section under each bull. These calving ease sires could also be used on mature cows.

SEMEN COLLECTION:

Each bull is being sold with 100% possession, marketing and ownership. Yavenvale Herefords reserves the right, (if desired in the future), to collect semen in any bull, for our own in-herd use only. All costs associated with the collecting of semen would be met by Yavenvale and collection would be at a time suitable to the purchaser. The purchaser would have total control of the bull, including any marketing of the physical bull or semen.

LIABILITY:

Please note that any persons entering Yavenvale for any purpose do so entirely at their own risk. The owners, employees, sale staff and representatives accept no responsibility for any accidents that occur.

DISCLAIMER:

Whilst all due care and attention has been paid to accuracy in the compilation of this catalogue, neither the vendors nor the selling agents or representatives thereof assume any responsibility whatsoever for the correctness, use or interpretation of the information on animals included in this sale catalogue.

HANDLING YOUR NEW BULL:

All stock work on Yavenvale is carried out on either motorbikes or horses and dogs are used. Sale bulls have been evaluated for temperament and to the best of our knowledge are quiet and easy to handle under these conditions. However we recommend that when your new sire arrives home have some steers or cows in the yards when you unload him to help him adjust to his new environment. Should you require further advice, feel free to contact us – we are only a phone call away.

COVID-19:

Current protocols will be adhered to at Yavenvale regarding this disease.

Breedplan at Yavenvale

We use and believe in Breedplan and utilise this tool as a management and selection aid to achieve balanced and optimum performance.

We think Breedplan EBVs are by far the most accurate method of comparing bulls for production traits such as Growth, Milk, Muscle, etc, as they adjust for non-genetic differences and are benchmarked to the breed baseline. They remove the visual bias caused by variations in environment and management that do not have any bearing on how the bull will breed.

Comparisons of bulls, for genetic worth, using actual weights and measurements can be dangerously misleading unless adjustments are made between - animal differences for age, age of dam, nutrition, etc, and then compared to a breed benchmark, as is the case with Hereford Group Breedplan.

All cattle have been weighed, scanned and assessed in accordance with Hereford Group Breedplan.

Estimated Breed Values (EBVs)

The EBV is the best estimate of an animal's genetic merit for that trait.

Accuracy

An accuracy is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Accuracy below 50% should be considered low.

Birth

CED: Calving Ease Direct EBVs are estimates of genetic differences in the ability of a sires' calves to be born unassisted from two year old heifers. The Calving Ease Direct EBVs are reported as differences in the percentage of unassisted calvings. Higher, more positive Calving Ease Direct EBVs are more favourable.

GL: Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

BWT: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

Fertility

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

Growth

Milk: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200 day weight of their calves.

200: 200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400: 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600: 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Carcase

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate better muscling on animals.

RUMP: Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

IMF%: Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcass. Depending on market targets, larger more positive values are generally more favourable.

The Group Breedplan Estimated Breeding Values contained in this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither Herefords Australia Limited nor the ABRI oversee or audit the collection of this data.

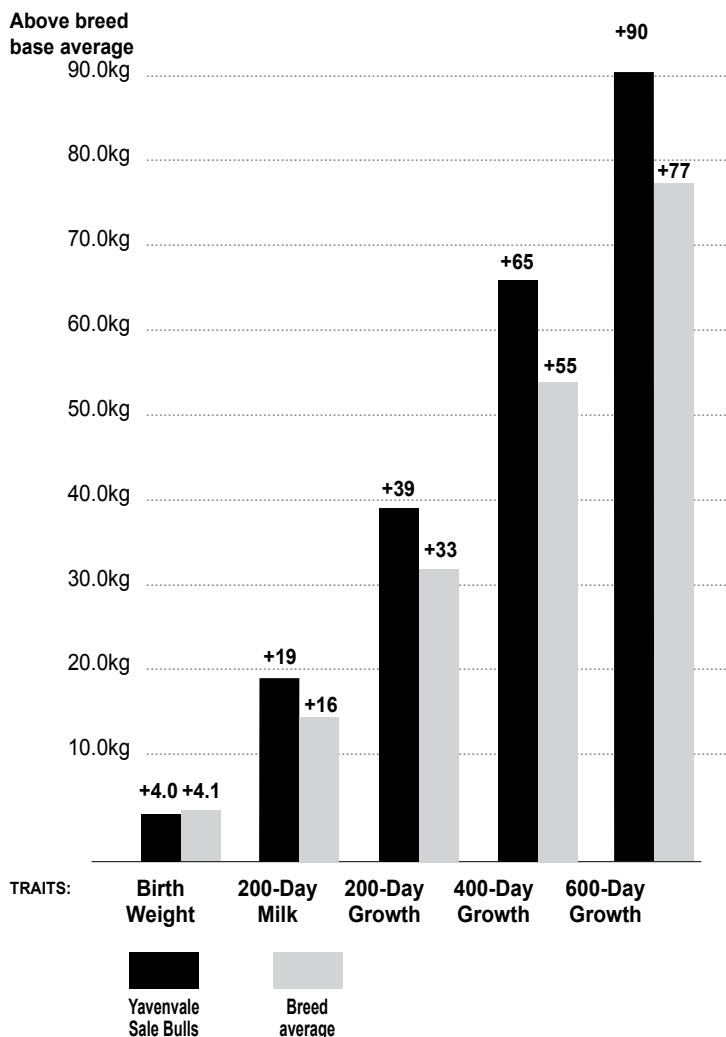

The EBVs for the majority of sale lots are December 2021 Group Breedplan. Monthly group runs are now conducted and EBVs are constantly updated. For this reason the EBVs on the Herefords Australia internet database may be slightly different to those printed in this catalogue but still fully comparable to EBVs from other Poll/Hereford herds.

BREEDPLAN SELECTION INDEXES:

Selection Indexes rank animals for a single selection goal – **profit**. An index gives you a **single EBV** that reflects the value of an animal, to your breeding objective, in **dollar terms**.

Indexes apply different selection pressure for growth, maternal, carcass and fertility traits to give you the most profitable herd over the long-term. Weightings are calculated to account for antagonisms (correlated responses) between traits - the end result an animal with a balanced EBV set.

Hereford selection indexes are calculated for four production/market specifications:

- Southern Self-Replacing (SSR)
- Northern Self-Replacing (NSR)
- Southern Baldy Maternal (SBM)
- Northern Baldy Terminal (NBT)

At **Yavenvale** the Southern Self-Replacing index most closely reflects our breeding aims.

GENOMICS AT YAVENVALE:

Genomics, or genomic selection, refers to the inclusion of DNA information into the genetic evaluation program known as Breedplan. The DNA information used for genomics is in the form of thousands of genetic markers, known as SNPs. Genotypes for these thousands of SNPs are generated by running a DNA sample from the animal on a SNP chip.

Yavenvale has taken ear notch samples from both bulls and females in our herd and the DNA of the animal has been extracted, and run on a SNP chip. The resulting SNP genotypes are then used, along with pedigree information and performance information, in the calculation of Breedplan EBVs.

The main benefit to potential buyers of Yavenvale bulls is the greater accuracy in the EBVs as a result of genomics. As the DNA of our cattle are compared to the breed's reference population, genomics helps determine which are the animals with the most desirable genes for any particular trait. The continuing evolution of this technology is on-going and the full value is yet to be realised but the potential gains for our stud and the beef industry as a whole is exciting.

POLLED GENE MARKER TEST:

The Beef CRC has developed a gene marker test for the poll gene. This test aims to identify whether cattle are homozygous polled (PP). If mated to horned cows, these bulls that carry two copies of the poll gene (PP) could genetically dehorn up to 100% of their progeny.

The test also identifies those bulls that are visually polled but carry a horned gene (Ph) known as heterozygous polled. If mated to horned cows, these bulls will genetically dehorn approximately 50% of their progeny.

Through the company Neogen Australasia, Yavenvale has gene tested and identified 109 bulls that are homozygous polled (PP) in the 2022 Yavenvale sale team. We are waiting on the test results from two bulls which will be available by sale day.

In a new addition all pedigrees now carry the (PP) symbol after an animal's name which denotes a homozygous polled tested animal.

The bulls that carry the horned gene are listed as heterozygous polled. These bulls will simply have a (P) symbol after their name. We have not gene tested sale bulls that are polled but have a horned dam. These bulls are already known to be heterozygous polled.

PEDIGREE ABBREVIATIONS:

There are a number of abbreviations that appear in the pedigrees of animals in this catalogue denoting the horn status of the animal.

(P) = the animal is polled

(PP) = the animal is tested homozygous polled

(S) = the animal is scurred. The scurred gene is independent to the polled gene and gives no indication of the level of horned or polled progeny that will result from this sire.

(H) = the animal is horned

(H#) = the animal is horned but has polled breeding in its pedigree.

If mated to horned cows, these bulls will not dehorn any of their progeny.

QC was purchased for \$44,000 at the very successful 2021 Bowen on-property sale. So much to like about this exceptional sire with striking appearance, natural balance and style. Pedigree is full of some of the most proven bulls in the breed combined with a really strong data set. Ranks in the top 5% of the breed for IMF, top 10% for GL, Milk, Rump, top 20% all growth traits, EMA & all indexes.

We can't wait for the first calves to arrive in spring 2022 from this impressive US sire. His EPD (EBV) graph is incredible ranking in the top 5% of the breed or better for CE, BW, WW, YW, REA, MAR & all indexes. Importantly he is phenotypically outstanding, homozygous polled, outcross genetics and has a great dam to complete the package.

PROTECT YOUR CATTLE WHEN IT MATTERS MOST

Protect your cattle from fluke

- Nitrofluke controls all three stages of liver fluke including the *most damaging two week old stage* as well as triclabendazole-resistant strains.
- Effective control of early immature liver fluke (including the 2 week old stage) is the proven way to *safeguard the health, productivity and fertility* of your livestock.

Dargie, J.D. (1986) The impact of production and mechanisms of pathogenesis of trematode infections in cattle and sheep. In: Ed. M.J. Howel, Parasitology-Quo Vadit Proceedings of the Sixth International Congress of Parasitology, Australian Academy of Science, Canberra, pp 453-463. Boray, J.C. (1999). Liver Fluke Disease in Sheep and Cattle. Agfact AO.9.5.7 Second Ed. revised by Hutchingson, G.W. and Lowe, S. NSW Agriculture.

TREATING FOR TWO IS BETTER THAN ONE¹

(MH) Mannheimia Haemolytica and (IBR) Infectious Bovine Rhinotracheitis Virus are two of the main infectious agents that cause BRD¹

IBR and MH are often linked to pneumonia cases²

Only Bovilis[®] MH+IBR helps controls both MH and IBR

No wonder more and more feedlots and producers prefer Bovilis MH+IBR to help control BRD³

COOPERS[®] **BOVILIS[®] MH+IBR** **THE MOST COMPLETE BRD VACCINE**

Toll Free **1800 885 576**

Grow their potential.

Don't let trace element deficiencies limit what they can become. Use COBALIFE™ VB12, SELOVIN™ LA or COPPERPLAN™ 20 in cattle at critical times to address these deficiencies and unlock their potential.

**Call 1800 678 368 or visit
growsolutions.elanco.com for more information.**

Good nutrition is good business.
