

HICKS BEEF BULL SALE

Thursday, 3rd March, 2022
1.00pm HOLBROOK

SALE VIDEOS
www.hicksbeef.com.au
www.auctionsplus.com.au

Breeding focus and genomics makes heifer calving easier.

ABC P585
World leading API bull. API of +\$201.

Independent structural assessment by Liam Cardile on all Hicks Beef.

Are You Bugged Mate?
One of the most positive events of the year at Hicks Beef.

A wet year.

Two approaches to flooding - wear big boots or strip off and get into it.

Tom, Hennie & Shirl - competing in the Holbrook Working Dog trials.

Hennie's sign supporting her Dad.

HICKS BEEF BULL SALE

Thursday 3rd March, 2022

Sale Commences: 1.00pm

Inspections from 10.00am

Auction in the sale barn with video presentation of each lot. All lots will be penned for your inspection on sale day. We encourage you to call and arrange an inspection prior to sale day.

The Hicks Beef Bull Sale will be conducted under the current COVID-19 protocols.

56 Australian Beef Composite Bulls
14 Hicks Red Angus Bulls

2% REBATE
to Outside Agents

We have poor mobile phone reception at our sale ring. Please call Phil from Elders to organise phone bidding.

RED ANGUS GROUP BREEDPLAN

ESTIMATED BREEDING VALUES (EBVs) The EBV is the best estimate of an animal's genetic merit for that trait.

ACCURACY: Accuracy is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on ASI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Carcase Weight EBV (kg) is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 650 days.

Eye Muscle Area EBV (sq cm) This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13th rib site and the P8 rump site and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

For further information please contact the Red Angus Society or Red Angus BREEDPLAN.

Beef Class Structural Assessment System

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on affect of structural improvement through out all sectors of the beef cattle industry.

Jim Green and Liam Cardile of 'BEEFXCEL' service many of the leading seedstock herds in Australia. 'BEEFXCEL' is not involved in any genetic marketing or specific breeding advice and therefore has no conflict of interests to influence their stock appraisal. The integrity of the structural data provided by 'BEEFXCEL' is recognised throughout the industry as Jim and Liam are fully INDEPENDENT assessors.

HICKS BEEF STRUCTURAL PROGRAM: Since 2003 Hicks Beef have used the services of BEEFXCEL to assess the structure of all sale bulls. The Autumn 2022 Hicks Beef Sale Bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft. The Hicks Beef sale bulls were assessed by **Liam Cardile** of LRC Livestock on 15/09/2021. The composite bulls scrotal circumference measurement was taken on 15/09/2021.

How to Use The Beef Class Structural Assessment System

The Beef Class Structural Assessment System uses a 1-9 scoring system:

- A score of **5** is ideal (Note: Except for Temperament where a Score of 1 is ideal);
- A score of **4 or 6** shows slight variation from ideal, but this indicates most animals. An animal scoring 4 or 6 would be acceptable in any breeding program;
- A score of **3 or 7** shows greater variation but would be acceptable in most commercial programs.

However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal;

- A score of **2 or 8** are low scoring animals and should be looked at closely before purchasing;
- A score of **1 or 9** should not be catalogued and are considered culls.

Liam Cardile on 0409 572 570

API – Profit Based on Fertility

API – the profit index that shows us where our priorities should be. The All Purpose Index weighs up the \$ inputs and outputs of beef production.

The big drivers of profit are stayability (a measure of how long a cow remains in the herd) a measure of fertility and soundness. Followed by cow herd intake (mature cow size), calf survival and heifer pregnancy. Yes, fertility, soundness and live calves make up the priority for breeders chasing higher returns, before weaning weight, carcass weight and feedlot intake.

HICKS BEEF GUARANTEE - Nothing left to chance Genomically Enhanced EPDs

- All sale bulls and females are assessed on one of the world's most advanced performance programs in the world with IGS - International Genetic Solutions
- All figures; both dams, sires and individuals are genomically enhanced, with DNA verifying parentage and improving the accuracy of the performance figures.

The DNA test is like knowing

- 15 Calving Ease Scores
- 21 Birth Weights
- 22 Weaning Weights
- 24 Yearling Weights
- 25 Daughters Records for Stayability
- 6 Carcass Weights
- 8 Marbling Scores
- 5 Rib Eye Measurements

- Independent veterinarian breeding soundness checks by the industry leading Holbrook Veterinary Clinic.
- Independently assessed for structural soundness by Liam Cardile, LRC Livestock, one of Australia's most experienced stock assessors.

- All bulls measured for all traits, birth, weaning, yearling, carcass scanned, temperament.
- All females on Total Herd Enrolment, all measurable traits recorded.
- Producing bulls in optimum condition for their first joining season is our priority. We keep our bulls on a steady plane of nutrition, with a high roughage, silage based ration.
- All bulls vaccinated with Vibrovax, Ultravac 7 in 1 and Pestiguard
- All bulls tested free for pesti virus
- Backed by Hicks guarantee

Vet Check Information

All bulls presented in the auction have been fertility tested by the Holbrook Veterinary Clinic. They have passed an examination of their reproductive tract, which includes a testicular palpation, internal reproductive organ palpation and penis check.

General health and structure are part of the course for this veterinary examination. Service ability testing and semen assessment have not been performed and we encourage all purchases to integrate their new bulls into the risk mitigation strategy that they employ back home.

QUICK GUIDE TO EPDS

BLACK COMPOSITE SALE BULLS

Hicks Beef Bull Checklist

- ✓ **Moderate Birth** - we aim to have birth weights lighter than breed average
- ✓ **Specialist Heifer Bulls** - in all our breeds, top 20% calving ease
- ✓ **Weight Gains** - up in the top 20% of breed for 200 & 400 day weights
- ✓ **Mature Weights Less** than breed average, large cows need more maintenance
- ✓ **Carcass** - we believe muscle and yield will be demanded by industry and that marbling is an important trait
- ✓ **Temperament** - is important, we cull heavily on temperament, sale bulls and cows
- ✓ **Structurally Correct** - we feel that we are competent enough to structurally assess bulls, but we know you want an independent professional. We use Liam Cardile from CTC to assess all our sale bulls for feet, legs, sheath and testicles
- ✓ **Tested** - for known genetic abnormalities.
- ✓ **Tested negative** - Pesti-virus carriers.

 WFL PROSPECT

HICKS REDEMPTION K44
HICKS RED P162
 HICKS RED M29

R4 is a thick, gutsy bull from a performance registered cow. We are in the process of bringing our performance dams into our fully registered list. In the mean time this bull offers some of the best bloodlines to commercial breeders. He is by our new sire Profitmaker that specialises in calving ease and top 1% feed efficiency. His calving ease of 7.8 is well above top 1%, should make him very low input at heifer calving.

HICKS MARBLE BAR N30
 HICKS RED PATRICIA K28

HICKS PACKER H83
HICKS BEEAC L35
 HICKS BEEAC H62

Sired by one of our favourite and most used sires, Hicks N30. This son shows why we keep using this bull. R124 has some of the best balanced numbers in the catalogue. I often get asked by breeders - How do I improve my Breedplan numbers? The answer is; use a bull like this with exceptional balanced traits. My field notes say - growth, muscle, carcass with moderate birth weight.

HICKS BLACK DANDLOO M46
 HICKS DANDLOO E592

Another elite calving ease bull, very suitable for heifer joining. In turn his daughters should be valuable with inbuilt calving ease, above average 400 day growth and lower mature cow weight, positive fat and high marbling. His sire HRA N30 ranks highly on our US figures with great calving ease and carcass.

Red yearling bulls.

RED ANGUS SALE BULLS

DIRECTIONS

DELIVERY: Stock awaiting delivery will be held free of charge for up to 14 days after the sale at the buyer's risk.

GUARANTEE: We have always provided full replacement guarantee against fertility and genetic faults. It is important that we are contacted as soon as possible to rectify any problem.

FEEDING POLICY: We believe that overfeeding can cause many problems to bulls long and short term. All our cattle are run in large paddocks under commercial cattle conditions. All Breedplan figures are assessed under these conditions usually from mobs of over 100 cows and calves.

As we sell our bulls younger than most studs we feel it is important that they are in suitable condition to withstand the rigours of their first season. The bulls are given a supplementary ration for 10 weeks, out in the paddock still in their calving groups.

All bulls are treated identically with no preferential treatment for the top bulls. We have sold bulls to many areas of Australia and have had no complaints about their mobility or fertility.

Terms and Conditions of Sale

1. Subject to reserve prices, the highest bidder shall be the purchaser, and in the event of any dispute arising it shall be settled by the Auctioneer, unless one of the claimants will advance the bidding above the disputed bid, in which case the lot or lots shall be put up again.
2. The purchaser shall deposit the whole or any part of the purchase money if required at any time during the sale.
3. All stock shall be paid for in cash immediately on conclusion of sale, and prior to delivery, but, in the event of delivery being made, or possession obtained by the purchaser or his representative prior to the payment of the purchase money, or any cheque given on account of same, the purchaser shall hold the stock as trustee only for the vendor.
4. All stock shall be at the risk of the purchaser upon the fall of the hammer.
5. No warranty is given by the Auctioneers with any lot, and, as all lots are available for inspection previous to the commencement of the sale, the same are sold with all faults, if any.

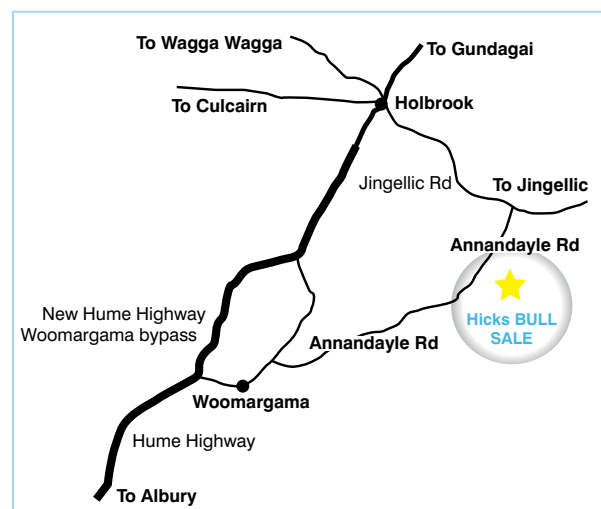

The Auctioneers shall not be responsible for any errors or omissions in any particular appearing in the description or pedigrees of any lot for sale, and no error, omission, or misdescription in such particulars or pedigrees shall invalidate the sale or be made the subject of any claim for compensation.

Directions from the South

Take the Woomargama exit to the old Hume Highway. Turn right onto Annandayle Road.

Directions from the North

From Holbrook turn east down the Jingellic Road, travel 8.1kms then turn right into Annandayle Road and we are 2.8kms on the left.
