

20th SOUTHERN CHAROLAIS BREEDERS GROUP SALE

12 NOON, THURSDAY: 17th MARCH 2022

YEA SALEYARDS

Offering
41 Bulls
6 Females

Kills the parasites that count

The two unique models of Dectomax[®] Injectable and Dectomax[®] Pour-On give you two powerful choices to control the parasites that count, including the five major worms, lice, cattle tick and buffalo fly.* Both models have the active doramectin that makes the difference. It's the broad spectrum efficacy and persistent days of activity against the key internal parasites that makes the difference with Dectomax.

Dectomax provides for protection for your cattle, with fewer treatments and reduced pasture contamination. It also has no adverse effect on dung beetle populations.¹⁻²

Dectomax Pour-On

The reliable all-rounder provides protection against the worms that count.

- Convenient, easy to administer
- Persistent activity against the 5 major worms
- Nil milk withholding period
- Rainfast
- Meat withholding period of 42 days
- Export slaughter interval of 42 days

**NIL MILK
WITHHOLD
PERIOD**

Dectomax Injectable

This high performance model provides injected performance where it's needed.

- Reliable dosing, every time
- Persistent activity against the 5 major worms
- Controls cattle tick for up to 28 days
- Low irritant formulation, easy to administer
- Meat withholding period of 42 days
- Export slaughter interval of 42 days.

**CATTLE
TICK
CONTROL**

Identify the mixture of worm types in your local area:

Charolais Silver Calves- your golden opportunity

Sale Location:

Yea Selling Complex: From Yea take the Whittlesea Road, approx 2km south turn left into Flat Lead Lane.

Welcome Message

Dear Fellow Cattle Breeders.

Welcome to our 20th Southern Sale and to the longest running Charolais multi vendor sale in Australia to which we can now boast two decades of being able to provide quality Charolais bulls to prospective buyers from registered stud breeders.

On behalf of southern Charolais studs we are pleased to present a large selection of over 40 bulls for appraisal with some new studs that have presented bulls. With this number to choose from buyers will be able to select the bull with the attributes and qualities that they desire to best fit their enterprise. With beef industry achieving record breaking prices this is the time to invest in a quality terminal sire to get calves on the ground that grow quickly to take advantage of these prices.

If you have concerns about attending the sale in person, or cannot make it on the day, the sale will again be interfaced live on Auctions Plus for online bidding. Agents will also be in attendance to inspect and bid on your behalf if you so wish.

The bulls available have all been inspected, semen tested and excluded to be persistently infected for pesti virus, so buyers can purchase knowing bulls are ready to work and disease free. Most have EBV's available to assist in your selection.

There is also a small selection of heifers on offer this year for buyers wanting to invest in a registered breeding female. With breeding age females being in high demand this is an opportunity to get a quality heifer for your enterprise.

I would like to thank all of the vendors and sponsors for their support in making the sale possible. We are all looking forward to catching up on Thursday 17th March and discussing yet another turbulent year that was. Bulls will be yarded for inspection by 10AM and also available for inspection prior to the sale by contacting vendors.

Yours sincerely,
Colin Pickering.
Chairman.
Southern Charolais Breeders Group Sale

SALE INFORMATION

Fertility guarantee:

a) Semen test is optional, however vendors are reminded that it is in their best interest to have their bulls tested within 2 weeks prior to the sale. Bulls are to be sold as fertile and capable of natural service. The purchaser will have the right of cancelling the sale within six months of the date of the sale if they can submit a Veterinary report stating that the bull is infertile or incapable of natural service. The veterinary surgeon must have state that, in his opinion, the bull has not suffered since delivery to the purchaser, any injury or maltreatment which could have affected its breeding ability. The vendor is liable to refund the purchase price of the animal in full.

b) All females are to be sold as guaranteed breeders. Where a purchaser submits a veterinarian certificate within twelve months of the date of the sale stating that a female of joinable age is infertile and, in the veterinary surgeons opinion, has not suffered, since delivery to the purchaser, and any injury or maltreatment which could have affected her breeding ability, the Vendor is liable to refund the price in full. This will not apply where an attempt has been made to transfer embryos from the female.

c) Females 24 months and over are to be pregnancy tested in calf or have a calf at foot, vendors must supply a PTIC Certificate for every female entered in the catalogues as PTIC. Females under 24 months may be mated or unjoined.

Conditions of sale for interstate purchases:

Any animal, purchased for interstate movement, which requires further tests will be forwarded to an approved Quarantine area where appropriate tests will be carried out in compliance with the entry requirements into the destination state. The cost of agistment, transport, and health status tests are to be borne by the purchaser of the all cattle passing such tests, or by the vendor, should they fail to pass such tests. Payment for the cattle to the vendor will be made within normal terms of sale whether or not the cattle have been tested for entry into the nominated state. In the event of cattle failing health tests and the sale being cancelled, the vendor will refund all moneys, paid as settlement, for the purchaser.

Health:

Each animal must belong in a herd accredited free or confirmed of both brucellosis and TB. A national vendor declaration form must be completed before the sale

All cattle including calves must be tested Pesti Virus negative. Pesti-Virus Laboratory results showing a negative test must be provided to the sale committee 7 days prior to sale day. (* This will be strictly adhered to).

To be eligible for entry, cattle must originate from:

- A herd with at JBAS Score of 6 or higher

Inspection:

All cattle must be purebred, registered and correctly tattooed as required by the Charolais Society of Australia Ltd. Cattle will be accepted or rejected on the basis of the Charolais Society of Australia Regulations for Show and Sale.

Transfer Fees:

Transfer fees are the responsibility of the vendors in accordance with the Regulations of the Charolais Society of Australia Ltd.

Herd Health Indicators:

All sale animals have been tested Negative for Pestivirus, Vaccinations are indicated on individual lots.

DNA Results

If a DNA profile has been established it is shown in the lot header.

50K - SNP 50K profile

100K - SNP 100K profile

SV - Sire verified by DNA

DV - Dam verified by DNA

PV - Parents verified by DNA

Homozygous tested poll animals are indicated by

HOMO POLL

Disclaimer: Information contained in this Sale Catalogue, including but not limited to pedigree, EBVs, DNA information, is based on data supplied by members and/or third parties. Whilst every effort is made to ensure the accuracy of the information, vendors, agents, the Charolais Society of Australia Limited (Society), their officers and employees assume no responsibility for its content, use or interpretation. Data submitted to the Society may have errors in it which cannot be detected without further DNA testing. Technology may have advanced since a particular test was undertaken so that previous inaccuracies which were not detectable are now able to be detected by current testing technology. (i.e. sire verification DNA testing indicates a different parentage to that recorded in the Herd book). For this reason, users ought to consider if they need to obtain independent testing of the relevant animal (if possible) to ensure the data is accurate.

RANGAN PARK RIO BRAVO D15 (RAN D15E) (P)

Dam: CLARINDA BRAVO MAID 2ND (KEN K42E) (P)

CLARINDA CHEYENE MAID (KEN G30E) (P)

Comments: R 56 is a power house of a bull, he is by a Ismael son who only sired 4 calves. They were all tiny at birth and grew fast, with plenty of strength. He is the youngest bull in the group but now easily the heaviest. R56 is in the top 1% of bred for 400 day wt, top 5% for 200 ,600, carcass weight & both Index Values.

PALGROVE ALYSSA 47 (PK B835E) (P)

VERNOLA JUST RIGHT J6E (VIW J6E) (P/S)

Dam: ALLEDNAW NUNCIATA M76E (AKT M76E)

ALLEDNAW NUNCIATA D6E (AKT D6E)

Comments: A powerful sire that will put some punch into your weaners. Moderate frame with loads of width and capacity. R7 has impressed us since the get go and we have used him lightly to mop up an A.I mob through winter. His Sire Hallmark keeps producing top end progeny year in year out and his dam is a good bodied Nunciata cow that milks well.

 PLATINUM WIND-FALL W75E (AJ1 W75E) (P)
Dam: PALGROVE DESIRE 140 (PK D86E)
 PALGROVE DESIRE 73 (PK Y143F)

Comments: A full ET brother to R45 but with a bit more growth and capacity to him. He consistently had the top weights at every weigh in with EBV's to match putting him in the top 1% for 200 day and almost in the top 1% for 400 days. If you are looking for calves that grow quick but want that added advantage of being able sell them as vealers or bullocks then here is your bull as he is all about growth. With the added plus of genetics and conformation on his side as well.

CHAROLAIS BREEDPLAN EBV Explanations

EBVs

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

TRAITS

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

CE % Dir = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

CE % Daughters = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination & hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length & therefore easier calving & increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

Selection Indices

Charolais selection indices are calculated for two market specifications, namely, Northern Maternal & Domestic Terminal Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. A selection index combines the EBVs with economic information (costs and returns) for specific market and production systems to rank animals based on relative profit values. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system. More information is available on selecting animals using a selection index. The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

Domestic Terminal Index (\$) [DTI] - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial herd where Charolais bulls are joined with a British breed cow base (e.g. Angus) targeting the domestic trade. This index assumes all progeny will be marketed with steers finished in the feedlot for 90 days, and weighing 450 kg (250 kg HSCW and 7 mm P8 fat depth) when marketed at 12 months. Heifers will be in the feedlot for 75 days, and weigh 430 kg (230 kg HSCW and 9 mm P8 fat depth) at 12 months. In response to industry feedback, positive emphasis has been placed on finishing ability.

Northern Maternal Index (\$) [NMI] - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial self-replacing herd where Charolais bulls are joined with Bos indicus cows in Northern Australia targeting the grass fed Jap Ox market. Selected heifers are retained for breeding and so maternal traits are of importance. Steers target 650 kg live weight (360 kg HSCW and 12 mm P8 fat depth) and heifers 630 kg (340 kg HSCW and 14 mm P8 fat depth), at 26 months of age. In response to industry feedback; positive emphasis has been placed on finishing ability.

For further information, contact the Charolais Society (02 6771 1666) or Charolais BREEDPLAN (02 6773 3059).
