

TALGOONA CHAROLAIS

1st Annual On Property Production Sale

11 am Friday 25th March, 2022

18 Consistent Predictable CHAROLAIS BULLS

TALGOONA CHAROLAIS

Production Sale 18 Charolais Bulls

Friday March 25th, 2022

Commencing at 11 am

**On Property at 33 Mittagong - Yerong Creek Road
Yerong Creek NSW**

The sale will also be interfaced with AuctionsPlus.

TALGOONA CHAROLAIS

We wish you a warm welcome to our first annual production sale after 50 years of breeding Charolais cattle.

Talgoona Charolais was first registered in 1972 by Mike and Bev Galvin, and in 2003 Bryce and Melissa Galvin took over the operation of the stud. The original English and French bloodlines were enhanced by quality Australian bred sires from Rosedale and Mount William and most recently Rockwood with Palgrove Bloodlines in the pedigrees of these bulls. We have focused on breeding a herd of consistent, easy calving fertile cows with good doing ability who then produce the type of functional bulls aimed primarily toward the commercial industry.

We believe by breeding to a consistent type, our bulls will produce even consistent progeny that can fit into any market category, vealer or yearling, and grass or grain finished.

Many years of consistent breeding and the decision 10 years ago to gradually increase our cow numbers has led to a point where we can offer an even line of 18 industry focused Charolais bulls. We are also offering free delivery within 200km.

We are very proud of this draft of bulls and believe they are a true indication of our breeding program. They are moderate framed, well fleshed, very easy doing with good temperament. Our main sire Rockwood Magic has really consolidated our breeding program with his excellent muscle pattern and exceptional softness that can be seen in his progeny being sold in this sale.

If you have any questions feel free to call Bryce on 0409169712

Bryce, Melissa, Sophie, Rachael and Jessica

Talgoona Charolais

Sale Information

Conditions of sale

- *all animals will be offered at auction. If not sold, they will be retained by the stud.
- *inspection any time before the sale can be arranged with Bryce Galvin 0409169712
- *Bulls will be on display from 9am on the day of the sale
- *Telephone bidding is available by contacting Anthony Cummins 0428457204
- *registration transfer fees are the responsibility of the vendor

Fertility Guarantee

Bulls are sold as fertile and capable of natural service. Any claim on a bull must be made within 12 months after sale date and be accompanied by a Veterinary certificate. The veterinary report must state that the bull has not suffered any injury or maltreatment which could have affected his breeding ability since delivery to purchaser. Bulls which do not breed will be replaced by a bull of equal value or a credit less salvage value at the next sale. Any issues please contact Bryce.

Health

The Talgoona herd is J-Bas 7. All animals derive from an accredited free T.B. and Brucellosis herd. Bulls were drenched at the beginning of March.

Delivery

Talgoona is offering free delivery within 200km of the property. Outside this delivery may be possible, contact and arrange with Bryce.

Insurance

Insurance is available, please speak with the agents, Nutrien or ABCummins.

Rebate

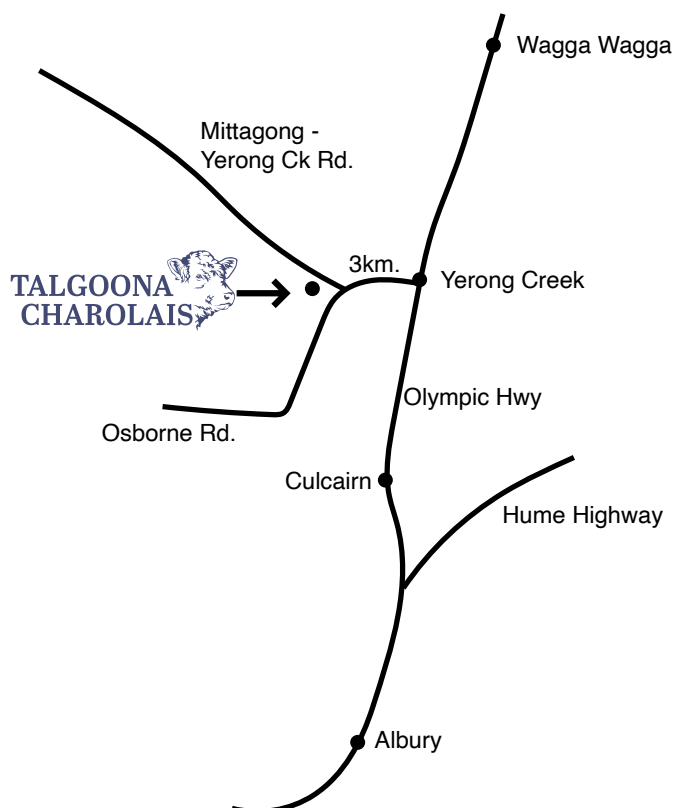

The vendor agrees to a rebate of 2% to outside agents who attend the sale or buy on behalf of their clients and settle within 7 days.

Address

Talgoona Charolais 33 Mittagong-Yerong Creek Rd. Yerong Creek N.S.W 2642.

Directions

From Yerong Creek take the Osborne Rd. for 3km, turn right into Mittagong-Yerong Creek Rd. go 300 metres and turn left into Talgoona Charolais.

Disclaimer: Any persons entering this property for any purpose what so ever including the attendance at cattle auctions do so at their own risk. We are not liable to you for any personal injury or death suffered by you and for the theft, loss or damage to any property caused or contributed to by us or by negligence deliberate act or unlawful conduct. "We" or "us" or "our" refer to the owners their employees contractors or agents and each of them. Whilst all care and attention has been paid to the accuracy in the compilation of this catalogue, neither the vendor nor the agents or representatives thereof assume any responsibility whatsoever for the correctness use or interpretation of the information included in this sale catalogue.

Estimated Breeding Values (EBVs)

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

CE % Dir = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

CE % Daughters = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination & hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length & therefore easier calving & increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic

differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

Selection Indices

Domestic Terminal Index (\$) [DTI] - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial herd where Charolais bulls are joined with a British breed cow base (e.g. Angus) targeting the domestic trade. This index assumes all progeny will be marketed with steers finished in the feedlot for 90 days, and weighing 450 kg (250 kg HSCW and 7 mm P8 fat depth) when marketed at 12 months. Heifers will be in the feedlot for 75 days, and weigh 430 kg (230 kg HSCW and 9 mm P8 fat depth) at 12 months. In response to industry feedback, positive emphasis has been placed on finishing ability.

Northern Maternal Index (\$) [NMI] - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial self-replacing herd where Charolais bulls are joined with Bos indicus cows in Northern Australia targeting the grass fed Jap Ox market. Selected heifers are retained for breeding and so maternal traits are of importance. Steers target 650 kg live weight (360 kg HSCW and 12 mm P8 fat depth) and heifers 630 kg (340 kg HSCW and 14 mm P8 fat depth), at 26 months of age. In response to industry feedback; positive emphasis has been placed on finishing ability.

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives R particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

For further information, contact the Charolais Society (02 6771 1666) or Charolais BREEDPLAN (02 6773 3059).

Comments: Rodney is a long, smooth shouldered well muscled Poll bull, with great feet and legs. He is a very complete bull that will produce an even sappy line of vealers and the heifer portion could easily be kept for breeding with great fertility and milk genetics. Goes back to the great cow Mt. William E157E who produced here at Talgoona to 12 years off age.

AuctionsPlus

How to Register and Bid on AuctionsPlus

1

Go to www.auctionsplus.com.au to register at least 48 hours before the sale.

2

Select “**Sign Up**” in the top right hand corner.

3

Fill out your name, mobile number, email address and create a password.

4

Go to your emails and confirm the account.

5

Return to AuctionsPlus and log in.

6

Select “**Dashboard**” and then select “**Request Approval to Buy**”.

7

Fill in buyer details and once completed go back to Dashboard.

8

Complete buyer induction module (approx. 30 minutes).

9

AuctionsPlus will email you to let you know that your account has been approved.

10

Log in on sale day and connect to auction.

11

Bid using the two-step process – unlock the bid button and bid at that price.

12

If you are successful, the selling agent will contact you post sale to organise delivery and payment.
