WELCOME TO RIGA ANGUS

The Finger Family would like to welcome you to our 50 years of breeding Angus celebration Sale. The culmination of many years of dedication and a passion for breeding quality Angus which are phenotypically functional and genetically relevant for various markets.

Our celebration coincides with a spectacular season, exceptional demand for beef and high commodity prices. We consider ourselves most fortunate to be a part of these remarkable times!

Similarly, we have been so proud to have been part of our client's journeys, (some over 30 years) and to be able to share their reports of their top end market performance in a variety of production systems. Congratulations to all concerned. So well deserved!

This has validated our breeding objectives, to produce sound, functional cattle in a thick but moderate frame with excellent fertility and temperament, adequate milk, calving ease (with an emphasis on gestation length and structure), plenty of growth in combination with good carcass and IMF. There have been some significant analytical changes within Breedplan, with the most notable being the new selection indexes. Our production system is best represented by the \$A = Angus Breeding Index, where pasture is fully utilised for the majority of the year.

As we celebrate the success of our production system, we have selected some young females who we consider to be excellent future breeders from within a system of production with significant selection pressure for performance (particularly fertility).

A spring calving herd was established to coincide with Tim, taking over much of the day to day management of the farm. Meaning, we are for the first time able to offer some older bulls.

We are very proud of this line up of bulls and females. The yearling cohort is quite exceptional. As one person on inspection said, "You could easily purchase a line of bulls with confidence online."

Photography and pre-sale video taken on the 24th of February.

Individual Lot videos on the 28th of March.

We are exceedingly grateful to everyone who has supported us over the last 50 years!

With our very best wishes for 2022!

The Finger Pastoral Company
(Ian, Vera, Kate and Tim)

YEARLING BULLS

Do you want to lower the cost of your production? Or make your financial investments last longer? Perhaps you want to accelerate the genetic gain in your herd? Well if you answered yes to any of these questions then you might want to consider investing in a yearling bull(s).

Yearling bulls are becoming a popular choice for cattle producers. Many progressive beef producers are already enjoying the vast array of benefits that are associated with using younger bulls. They not only make sense genetically but also financially.

Yearling bulls allow the introduction of elite genetics much earlier and therefore accelerate the rate of genetic improvement within your herd. Using younger bulls can also result in a longer working life of each bull and therefore lowers your cost of production by reducing bull costs per calf. In addition yearling bulls can extend the use of your bull over heifers and they are generally more adaptable to new environments. Younger bulls are strong, keen, lean, fit, agile and ready for work.

However, to be able to access these benefits, the management of these bulls is very important to allow them to reach their maximum potential. Young bulls are still growing and so their health and body condition are far more sensitive to poor nutrition and being over worked. Younger bulls are more prone

to injury when mixed with older bulls; therefore they should be allowed to join a group of females either individually or with bulls the same age. **Young bulls should be allowed a mating load of 25 -30 females to join for 6-8 weeks only and then they should spelled for at least 3 months be.** Once you have removed your yearling bull(s) from their joining groups it is important to place them on a high quality feed in specially prepared paddocks.

At Riga Angus selling yearling bulls to our client base is not new, with many achieving a range of exceptional results.

Feel free to contact us if you would like to discuss using yearling bulls in your operation or if you have any further questions. If you would like more information on yearling bulls please check out this link www.dpi.nsw.gov.au/animals-and-livestock/beef-cattle/breeding/bull-selection/yearling-bulls

SALE INFORMATION

INSPECTION

You are invited to the **OPEN FOR INSPECTION DAY** on **MARCH 30, 10am – 4pm**. Sale Day inspections from 10am. For all other inspections contact Vera, 0429 939 105 or Tim, 0458 629 689.

INSURANCE

We strongly recommend you insure your new investment as the animal becomes your responsibility on the fall of the hammer. Please see Agents for your insurance requirements.

REBATES

- A 2% rebate will be offered to outside Agents who inspect bulls prior the sale or attend the sale day and nominate their clients in writing and settle in 7 days.
- A 2% rebate will be offered to buyers who do not settle through an agent and pay in full on sale day.

TRANSPORT

As part of our service we will deliver bulls within a 100km radius and the major centres of Wodonga, Shepparton, Melbourne and Pakenham, with long distance subsidy by negotiation. Make sure you fill out your delivery instructions and we will contact you to arrange a delivery time as soon as is possible. If you have your own transport, please tell the office staff at time of settlement. On arrival it is strongly recommended the animal has a companion animal.

ACCOMMODATION

There are a range of accommodation options in Mansfield including the Mansfield Motel 3-9 Highett Street (03) 5775 2377

REFRESHMENTS

Morning tea and lunch will be provided prior to the commencement of the sale at 1 pm.

METHOD OF SELLING

The sale will be conducted under the Helmsman System, in conjunction with a SIM system on AuctionsPlus. On arrival intending purchasers need to register and receive a bidding number. When the sale commences you will be able to bid on any bull regardless of lot number by filling in a bidding card and handing it to a 'runner'. Once a bid is submitted it cannot be retracted. The bids will be given to a central person in the order they are received and posted on a large board in the tent displaying bids and buyer numbers so you will be able to see at a glance whether your bid stands or has been over bided. The sale will be open for 20 minutes. At the end of 20 minutes a 2 minute bid clock will commence. A bid on any lot will restart the countdown clock. Any further bids on any lot will trigger the same process until a full 2 minute "no bid" period which will conclude the sale (or at the discretion of the sale manager).

GST

The sale is GST EXCLUSIVE.

NLIS AND ANGUS SOCIETY TRANSFERS

Riga Angus will provide complementary NLIS and Angus Society transfers.

SAFETY

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances. However, there are inherent risks associated with handling cattle. Visitors enter the cattle pens at their own risk. CHILDREN SHOULD NOT ENTER THE YARDS. People entering the yards are at risk of injury. Be especially alert for bulls fighting. We do not expect the bulls to be aggressive with humans, but sale day places extraordinary pressure on them as they experience an entirely foreign environment. Remember the quietest bull is in fact an unpredictable animal. Please do not crowd the bulls or loiter inside the pens.

INFORMATION PACKAGE

If you have purchased a bull on sale day please collect your bull(s) information package from the main office.

ANIMAL HEALTH

All animals within this sale catalogue are current holders of a Zoetis Star Certificate. This means that they have been:

- Tested free of Pestivirus
- Vaccinated 2x Pestigard, 2 x 7 in 1
- Selovin LA, Piligard, Eclipse, Multimin
- In addition, bulls have had, 2 x Vibrovax,
- 5 in 1, Bovi-Shield MH-One, Rhinoguard
- Riga has a Johne's Beef Assurance Score of (J-BAS) 7. Riga has implemented a Biosecurity Plan and has undertaken Triennial Check Testing.

QUALITY ASSURANCE

- All animals within this sale catalogue have been:
- Independently assessed by Mr. Dick Whale of Independent Breeding & Marketing Services on 09/02/2022
- Scanned and assessed for structure, temperament, scrotal size and muscle by Liam Cardile of BeefXcel on 08/02/2022
- Fertility tested by Dr. Anna Manning of Delatite Veterinary Services in April, just prior to the sale.
- No Foot trimming occurs on property

FERTILITY/PHYSICAL EXAMINATION

Dr. Anna Manning of Delatite Veterinary Services has evaluated each individual bull and found the bulls to be in good reproductive health ready for your breeding season.

Each bull has had the following assessed:

- Musculoskeletal – including feet
- Palpation of scrotal contents and measurement of testes (cm)
- Examination of penis
- Internal palpation of accessory sex glands
- Semen quality
- Females were pregnancy tested on the 16/02/22.
- Weaner Heifers vet checked

FERTILITY GUARANTEE

All animals have been evaluated for structural soundness and inspected for fertility by a veterinarian. To the best of our knowledge the animals are in sound working order at the time of sale.

During the next 12 months if a bull becomes infertile or breaks down due to reasons other than illness, injury or disease after leaving Nillahcootie Park, we will provide you with a satisfactory replacement if available OR credit you the purchase price less the salvage value which may be used towards a future purchase. In some instances a refund of the balance may be an option.

A claim is to be accompanied by a vet certificate with the costs the responsibility of the purchaser within 12 months of purchase.

NUTRITION

This season has enabled animals to graze silage regrowth and summer crop for an extended period. In preparation for the Sale, bulls will have had a small amount of grain mix together with silage and hay. Heifers will have had access to silage and cereal hay.

RECESSIVE GENETIC CONDITIONS

All our sale animals are free from AM, NH,CA & DD.

DNA PARENT VERIFICATION

All animals catalogued are sire verified and some also have dam verification. The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia

PV = Both parents have been verified by DNA

SV = The sire has been verified by DNA

DV = the dam has been verified by DNA

= DNA verification has not been conducted

E = DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively

Angus bulls reach \$4000

ANGUS bulls sold to \$4000 at the recent Trentside Angus stud dispersal sale at Wodonga.

Twelve bulls sold to \$4000 and averaged \$1534, while 25 cows and calves averaged \$1880 when they sold to \$2400.

The top-selling bull, Trentside Zenith M12, was by Wilson Downs Zenith Z3 which sold for \$4000 to a New Zealand buyer after it was named champion at the Angus National.

Geoff Sheather with Trentside Zenith M12 which sold for \$4000 at the Trentside Angus stud dispersal sale. Trentside Zenith was by Wilson Downs Zenith which sold for \$40,000.

Border Leicesters to \$1800

BUYERS from central NSW, Gippsland, South-East South Australia and local areas pushed Border Leicester ram prices to \$1800 at G. Starritt and Son's on-property sale at Kelso Park, Tatura.

The 14 stud rams sold to \$1800 and averaged \$793, while 35 flock rams sold to \$250 and averaged \$219.

In the ewe offering, 17 special stud ewes sold to \$230 for a \$131 average and nine 1993-drop stud ewes with lambs at foot sold to \$280 and averaged \$211.

The \$1800 top-priced ram, equal in quality, if not better than Kelso had offered in the past few years, according to Elders auctioneer Richard Cooper, was bought in partnership by L.A. and A.L. R. and W.A. and M.B. Meach of Bairnsdale.

The partnership was also leading bidder on a number of stud ewes.

KELSO
Spec. stud ewes: 17 to \$230, av \$131
Stud ewe drop: to \$280

Stud Poll Dorsets to \$1700

NSW, bought the top pitc cow when it outbid \$2000 for Booby Pound Creek, Tumbarumba, NSW.

The top-priced cow, Riga Leanne L4, had a bull calf at foot by the top-selling bull (Trentside Zenith) and was pitc to the same bull.

It was bought by Kamilaroi Angus stud, Merriwa, for \$2400.

Four lots sold for \$2200. The only bull to make that money was Trentside Zed BCN22, a Bobby Creek Zodiac son bought by J. McGuffie, Coolahula, Wirringa, NSW.

The first cow to make \$2000 was Trentside Lovely and its Xcusive was by Leewood Zealand and Trentside Nimble was by Kamilaroi Angus stud, Merriwa.

Another heifer calf by Trentside Zenith was at the foot of Riga Lynette when Peace Rose P1, Booboola, Wangarilla, NSW, bid \$2200 for the cow and calf unit.

D. Brennan, The Valley, Dunedoo, NSW, also bid \$2200 for Trentside Kite, a Te Mania Celebrity cow, with a bull calf at foot by Trentside Zenith.

The Talgai Angus stud, Blighy, NSW.

SA & SA-L indexes

Yarra Valley News

The Kakis family of Healesville are justly proud of their stud, and especially 'Riga Boris' which brought the top price of \$275 at Croydon market last month.

This remarkable for two reasons... the sale was not a special, or stud, sale. And 'the Kakis 'Riga' Stud is only a small holding of 26 acres carrying 11 or 12 brooders at most.

Mr Kakis says he has come to expect careful handling of these animals.

Since their first sire 'Balloch Embassy' was sold for top price and went to the Western District to start a new Angus stud, the Kakis breeding machine has revealed its exceptionally good genes.

Croydon sale top price did Riga Boris bring top price of \$275 (sold to Mr van Rosten who is starting an Angus Stud at Three Bridges near Yarra Junction) and two other Angus bulls reared by Mr Kakis did well too: RIGA BARON, born 11/9/75, sold to Mr Gibson, of Healesville, \$185.

RIGA BRUNO, born 8/10/73, sold to Mr Vane, Launching Place, \$120.

By present-day standards these are very good prices indeed and must surely prove that 'the Kakis approach to stud management is soundly based.

Their present sire, 'Lafra Brood Lead' was bought while still developing (quoted here) and is now showing excellent condition with big frame and good length... and quite disposition.

Ship romance: Mr Kakis has always fed his herd on good pastures and good grass hay without supplementary feeding. And he insists that gentle handling is of utmost importance.

“Leading prices obtained in the Wangaratta heifer market saw the Angus Australia award winner, Deepdale sell a yard of 27 Steers, Witherswood and Riga blood, at \$2490 or 684c/kg.”

“Mercieca Pastoral, Mansfield, sold 133 Angus calves including 37 Angus steers, 8-9 months, 390kg, for \$2590 or 664c/kg. January Weaner sales 2022.”

Riga is a consistently successful participant in the Stock and Land Beef Week Heifer Challenge. 2013 named Champion. 2014 listed in the Top 10, 2015 listed in the Top 10. 2020 (after a break from entering) listed in the Top 10.

“Just thought I’d drop you a note on how our weaner sale went at NVLX July 21. Our 9-10month steers made \$1935 (335kg) and heifers \$1785 (327kg). We are so happy with your bulls and pleased to be able to help promote your stud at these sales. Look forward to carrying on our association. Chris and Chantelle. AMP AG.”

How to Register and Bid on AuctionsPlus

- 1 Go to www.auctionsplus.com.au to register at least 48 hours before the sale.
- 2 Select “**Sign Up**” in the top right hand corner.
- 3 Fill out your name, mobile number, email address and create a password.
- 4 Go to your emails and confirm the account.
- 5 Return to AuctionsPlus and log in.
- 6 Select “**Dashboard**” and then select “**Request Approval to Buy**”.
- 7 Fill in buyer details and once completed go back to Dashboard.
- 8 Complete buyer induction module (approx. 30 minutes).
- 9 AuctionsPlus will email you to let you know that your account has been approved.
- 10 Log in on sale day and connect to auction.
- 11 Bid using the two-step process – unlock the bid button and bid at that price.
- 12 If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

STRUCTURAL ASSESMENT

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on affect of structural improvement throughout all sectors of the beef cattle industry.

Jim Green and Liam Cardile of ‘BEEFXCEL’ service many of the leading seedstock herds in Australia. ‘BEEFXCEL’ is not involved in any genetic marketing or specific breeding advice and therefore has no conflict of interests to influence their stock appraisal. The integrity of the structural data provided by ‘BEEFXCEL’ is recognised throughout the industry as Jim and Liam are fully INDEPENDENT assessors.

RIGA STRUCTURAL PROGRAM

The 2022 Riga Sale Bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft. The Riga sale bulls were assessed by Liam Cardile of BEEFXCEL on 08/02/2022.

HOW TO USE THE BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

The Beef Class Structural Assessment System uses a 1-9 scoring system:

- A score of 5 is ideal.
(Note: Temperament Score of 1 is preferable)
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of 2 or 8 are low scoring animals and should be looked closely before purchasing.
- A score of 1 or 9 should not be catalogued and are considered culls.

GENETIC TYPE SUMMARY (GTS)

All RIGA cattle have been assessed on the GTS Type/Structure system. All the cattle are considered acceptable for soundness and muscling. The GTS system has been broken up into two distinctive trait groups, descriptive traits and structural soundness traits.

Animals outside these scores should be considered culls and not catalogued for sale. Structure scoring is only given to give potential purchasers a guide; it is not a guarantee of the lifetime structure soundness of an animal. Where possible the Beefclass equivalent has been put alongside the GTS score for comparison. Contact Dick Whale on 0427 697 968.

DESCRIPTIVE TRAITS

STATURE		Evaluation for Frame Size. A maturity pattern 25 is an average frame. This may be influenced by age of dam, particularly 1st calf heifers.										
GTS Score		10	15	20	22	23	25	28	29	30	35	40
Frame Score			3	4			5			6	7	8
Less than Average Frame				Average Frame				Greater than Average Frame				

CAPACITY		An animal's evaluation combining depth of fore rib along with spring of rib and width of chest floor, as well as depth of flank. Scores greater than 25 indicates larger capacity.										
GTS Score		10	15	20	22	23	25	28	29	30	35	40
Beefclass			3	4			5			6	7	8
Less than Average Capacity				Average Capacity				Greater than Average Capacity				

BODY LENGTH		Evaluation of body length from withers to pins, Scores greater than 25 indicate longer body length.										
GTS Score		10	15	20	22	23	25	28	29	30	35	40
Shorter Body Length				Average Body Length				Longer Body Length				

MUSCLE		Scores higher than 25 indicate above average muscle. More muscle equals more meat.										
GTS Score		10	15	20	22	23	25	28	29	30	35	40
Beef class		D-	D+	C-			C+			B-	B+	
Less Muscle				Average Muscle				Greater Muscle				

DOING ABILITY		Ability to lay fat relative to their peers under common management.										
GTS Score		10	15	20	22	23	25	28	29	30	35	40
Worse				Good				Better				

STRUCTURAL SOUNDNESS TRAITS

FRONT FEET		Feet are a crucial structural component of a sound animal. Although impossible to get perfect the closer to a score of 25 the better.										
GTS Score		10	15	20	22	23	25	28	29	30	35	40
Beefclass		9	8	7	6		5		4	3	2	1

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcass, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcass than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcass merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

Calving Ease	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDir	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Growth	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcass	CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
Selection Indexes	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

Selection Indexes

\$D	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcass weight with 12mm P8 fat depth) at 16 months of age.	Higher selection indexes indicate greater profitability.
\$D-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcass weight with 12mm P8 fat depth) at 16 months of age. The \$D-L index is similar to the \$D index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$D aims to maintain mature cow weight, the \$D-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
\$GN	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcass weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
\$GN-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcass weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling. The \$GN-L index is similar to the \$GN index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GN aims to maintain mature cow weight, the \$GN-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
\$GS	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcass weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.	Higher selection indexes indicate greater profitability.
\$GS-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcass weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements. The \$GS-L index is similar to the \$GS index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GS aims to maintain mature cow weight, the \$GS-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
\$PRO	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcass weight with 10 mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
\$T	\$	Genetic difference between animals in net profitability per cow joined in a situation where Angus bulls are being used as a terminal sire over mature breeding females and all progeny, both male and female, are slaughtered. The Angus Terminal Sire Index focusses on increasing growth, carcass yield and eating quality. Daughters are not retained for breeding and therefore no emphasis is given to female fertility or maternal traits.	Higher selection indexes indicate greater profitability.

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Embryo Expected Average Progeny Values

Expected average progeny values are provided to assist breeders estimate the outcome of particular mating combinations. The actual EBVs for any individual progeny resulting from a particular mating are likely to vary from the expected average values.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.
 SV : the sire has been verified by DNA.
 DV : the dam has been verified by DNA.
 # : DNA verification has not been conducted.
 E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

.....
BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following identifications.....

from member.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: Signature:
 Date:

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

.....

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au

BUYER'S INSTRUCTION SLIP

This slip must be completed by the purchaser and handed to the selling agent prior to leaving the sale. No verbal instructions will be accepted.

Key skills honed at Angus school

GAINING crucial cattle skills was a driving reason behind participation at last week's Victorian Angus Beef Cattle Assessment School.

More than 30 participants from across Victoria, NSW and Tasmania, attended the day held at the Northern Melbourne Institute of Tafe's (NMIT) Epping campus.

The school covered meeting market specifications, steer assessment, selecting females and bulls, using performance records and carcass assessment.

Trevor Sargeant, a commercial Angus breeder from the Yarra Valley, said he was doing the course to learn more for on-farm operations.

NMIT student Mohamud Aseir, Heidelberg, said he was keen to put to practice lessons learned in his agriculture studies. He also hoped to complete an agricultural degree during the next few years.

■ Bob Dent, Bob Dent Cattle Services, demonstrating cattle assessment at NMIT last week.

■ RIGHT: Vera Finger and Tim Finger, Riga Angus, Mansfield take part in assessing steers at the Cattle Assessment School.

SOUTH DEVON TRIFECTA

Torr Down congratulates the Hamson Family, Kirrdean, Culcairn, N.S.W.

in completing the trifecta at Wodonga Market on July 27th, by gaining the top price in all three sections

- ★ A 9 1/2 month old purebred steer weighed 405kgs and sold for \$2.15.6 / kg making \$873.
- ★ South Devon x R. Angus @ 17 months was 510 kgs selling for \$2.08 / kg making \$1,060.
- ★ South Devon cow weighed 770 kgs selling at 1.67/kg making \$1,287.

All three animals were from Torr Down genetics. You too can achieve results like this by purchasing a

TORR DOWN POLL SOUTH DEVON BULL

Phone (03) 5424 1001

■ NMIT agriculture student, Ryan Sargeant and his father, Trevor, from the Yarra Valley, both enjoyed participating in cattle assessment last week.

■ Cattle Assessment School participants, Alice Hall, Scotsdale, Tasmania, and Emma Egan, Cora Lynn.

WE THANK ALL VISITORS AND BIDDERS IN ATTENDANCE TODAY FOR YOUR SUPPORT AND WE WISH YOU WELL WITH ANY PURCHASES MADE.
