The Waratah Story

Our interest in White Suffolks began long before we established the stud in 1995. Steve had worked in the prime lamb industry for some time and his interest in White Suffolks was kindled by his experience with Dorset and Suffolk sired crossbred lambs. It wasn't until a chance meeting with Ralph Spiers at the Melbourne Show in 1995 that the interest was re-kindled. We visited "Alkoomie" after that meeting and the WS seed was well and truly sown.

In October that year we purchased our first ewes – a pen of Detpa Grove ewes sired by "Anna Villa 6". More ewes were added at the Gadang dispersal and the 1996 National Sale, at our first of many National Conferences. Since that time, we have purchased only a few ewes.

Before starting the stud, we had a background working with performance recorded livestock and as a consequence the Waratah flock has been a LAMBPLAN participant since its foundation. This has enabled us to focus our objectives from the beginning.

Our philosophy has always been to back our own breeding program as the main source of stud sires. Outside sires have been introduced by small annual AI programs and each year our best ram lambs have been used as sires. A link between years has been maintained by retaining one of these young rams for a second, and sometimes third, joining.

The basic breeding objective at Waratah has not really changed since the foundation of the flock. We are, and have always been, driven by feedback from our clients in South West Victoria. As such our aim has been to breed high growth rams with balanced carcase traits whilst maintaining a low to moderate birth weight. In 2006/07 we began to take individual worm egg counts with the view to improving the worm resistance in the flock. Whilst not ignoring the gains we have made in growth and carcase, we have made significant gains in parasite resistance, creating a healthier animal outlook for the Waratah flock and that of its clients.

Likewise, Waratah was one of the early adopters of genomic technologies to assess our flock for eating quality traits. Again, whilst not ignoring the basic production traits, we have been able to reverse the unfavourable trend we shared with the rest of the lamb seed stock industry, improving both Intramuscular Fat and Shear Force.

As a smaller operation we have placed significant pressure on the reproductive performance of the flock. Mating programs were limited to two cycles after an AI program, and all empty ewes were sold immediately after pregnancy scanning. Whilst not deliberately selecting for fertility, we believe this approach has led to the flock being well above average for reproductive performance. This is clearly shown by the number of ewes in this sale that rank highly for Number of Lambs Born and Weaned.

Waratah has been a member of the Superwhites group since 2014 allowing the use of high performing young sires from across the breed.

Waratah has sold genetics throughout Australia with rams selling to \$22,000 (Adelaide Show, 2018). A successful on property sale has been held for a number of years with last years sale recording a top of \$15,000 for a son of Waratah 190323, and the highest ever average at Waratah of \$2622. Waratah 190323 is a joining sire for this sale and his daughters are also in the sale.

A highlight of our limited showing career was winning the Interbreed Lamb Production class at the Royal Adelaide Show 2018. We wish all purchasers of our ewes every success in the future. The 2021 drop of lambs will be our final sale on Monday October the 10th 2022.
