2022 Alumy Creek Angus Bull Sale

Welcome to our 32nd Annual on property and online Angus Bull Sale.

Looks like unprecedented is still the word in use for this year too. Another great season combined with exceptional cattle prices have restored optimism across the agricultural sector. Many areas of the country have experienced another great grass season with good rains- in some areas unfortunately a flooding excess, but still such a promising change to those years of drought and fires. The importance and value of agriculture plus global food security continues to be sharply focused. The world recognizes the need to feed populations and beef production continues to shine- the future very bright according to the analysts with commodity cattle bringing record sale yard prices and supply and demand pushing stock values to epic levels as producers across the country demonstrate their confidence by taking the opportunity to future proof their profits and continue to rebuild their herds with quality premium genetics.

This year we are pleased to offer a **terrific draft of 46 quality bulls**. The draft is another exciting selection of powerful, **thick, heavily muscled carcass bulls** with many of them **calving ease curve bending bulls very suitable for heifers or cows**. This draft of bulls presents very well again testament to the easy doing high feed efficiency productive genetics we select for in our Angus cow herd. The bulls **are great Angus type being long bodied and strong topped with deep spring of rib, added thickness and consistent natural muscling**. The AI sires of these bulls are some of the best global genetics available within the Angus breed. We continue to be an early adopter using outcross genetic bulls early in their breeding career with many seeing later heavy use as superior sires as time progresses. You have the profit opportunity to purchase direct sons of these bulls instead of waiting for sons of sons to be offered from many other herds. It has been great to see so many Alumy Creek clients producing the champion pens and topping the weaner sales again this season.

We always select to breed quality Angus cattle that can produce a profit under commercial conditions with market flexibility to target the domestic, heavy grassfed or grainfed markets. Because we retain the sisters to the bulls we sell, the mature cow size of our cattle must be sustainable in our grazing environment, which is crucial to maintain performance during tough seasons as well as the good seasons, with female cow longevity adding to herd profit.

We also apply stiff selection pressure for fertility, our heifers must calve as 2-year-olds unassisted and must go back in calf quickly to produce a calf each and every year. Clients comment on the consistency, quality and performance of their Alumy Creek sired replacement females. All the bulls in the catalogue will produce this valuable type of easy keeping, high fertility replacement females bred to work hard bringing in a good calf every year. These are the quality profit traits to rebuild into your cow herd for future performance.

We believe in using temperament, structure, EBVs and genomics as equal tools in the selection box for balanced sustainable cattle breeding and we don't just add the EBV numbers or single trait select. Our selection focus produces cattle that can achieve extra performance kilos on grass in the paddock with the carcass potential to also excel in the feedlot. Check out the balanced performance of the draft across the new updated multiple selection indexes.

We continue to embrace new technology with the sale bulls again **all tested with the Zoetis HDi50K DNA genomic testing and all sire verified** so have confidence with your purchase. The bulls have excellent TACE results, many with top 1-10% EBVs for the multiple traits we have selected for over the past 30 years- **Calving Ease, Short Gestation Length, fast Growth, big Eye Muscle Area, good marbling and heavy high quality Carcase Wt with high Feed Efficiency and Retail Yield**.

These breed rankings are measured against all the performance recorded Angus cattle in Australia & NZ, confirmation that our bulls carry the genes for profitable performance even though our environment doesn't always allow them to express their full potential. Please note that Angus Australia and TACE have changed the Selection Indexes this year and there are now multiple versions reflecting diverse production enterprises to utilize in your stock selection process. Please read the new EBV and Selection Index explanations to fully utilize this tool.

The 2022 sale draft again includes an outstanding selection of bulls with balanced performance. The calving ease, big muscle maternal and carcass specialists **Baldrige Compass** and his full brother, new season sire **Baldrige 38 Special** have 16 sons on offer. Both bulls are by the same sire as Australian Record priced bull and popular sire Millah Murrah Paratrooper but from a better elite female cow line. **Compass** and **38 Special** are both direct sons of the global superstar for maternal excellence Baldrige Isobel Y69. If you want calving ease, carcass and maternal profit in your cow herd don't miss the Compass or 38 Special sons with the added Y69 magic. **KCF Bennett TheRock** with 4 sons on offer this year and along with new season sires **Ferguson Trailblazer** (1 son) and **EXAR Monumental** with 5 sons all offer standout Angus phenotype plus calving ease, low birth wts, big growth and carcass performance. Use these sons over heifers or cows for added profit. Both Lisa's favourite Monumental and Trailblazer have sired several of the early 2022 southern bull sale toppers.

This year also sees an exciting draft of 16 super thick sons by new season sire **Mogck Entice**. Be sure to check them out- very quiet, low to moderate birth weights yet very powerful high growth, high feed efficiency and feedlot performance perfect to power up and add quality profit to Bos Indicus or Euro cow herds or inject quality performance into your angus cows. The Entice sons are long, deep, thick bulls with a great hind quarter setup to build calving ease into their replacement daughters.

All of the reference sires are quality maternal profit herd builders should you wish to retain female replacements from the sale draft bulls for herd rebuilding. As usual our bulls will present in strong forward paddock condition, ready to go out and work well for you.

Our quality draft of locally bred raised Tenterfield tough bulls will be offered for sale online AuctionsPlus and on property at 1pm Friday 27th May 2022 at Coldawinda, Tenterfield NSW, just 10 minutes south of the Qld border on the New England Hwy. Photos and videos are available online or the bulls are available for inspection on Wednesday 18th May at Coldawinda, Scrub Road, Tenterfield from 10 am or on sale day from 10am or by prior arrangement with Colin on 0429431900 and any of the agents.

As per usual phone bidding is also available through the agents and the bull sale will interface with Auctions Plus for those bidding Covid Safe from the comfort of their lounge room. Please call us if you would like a chat about any of the bulls. Take care and stay safe.

Colin, Lisa and the Kevers family

Sale details

COVID-19 REQUIREMENTS: The sale will operate under any **CURRENT COVID 19 REQUIREMENTS** and be subject to change. Please follow any current Public Health Orders and do not attend the sale in person if you feel sick, are awaiting test results etc. Please embrace the digital age and participate online or over the phone with your agent of choice. **WE CONTINUE TO RECOMMEND PRESALE INSPECTIONS AND BIDDING ONLINE OR OVER THE PHONE TO MANAGE ANY HEALTH RISKS.**

SALE DATE AND PRIOR INSPECTION TIME: The sale will commence at **1pm on Friday, 27th May 2022**, on property and online with Auctionsplus. Cattle will be penned by 10am on Sale Day and we strongly recommend **presale inspections which are by arrangement via the agents or Colin or on the Inspection Day Wednesday 18th May from 10am to 2pm. If you buy online or over the phone sight unseen, we happily stand behind the description of our bulls on offer.** All lots can be viewed online at AngusAustralia, Auctionsplus or www.alumycreekangus.com.au

REFRESHMENTS: As usual all **weather undercover open shelter** is available. Whilst we have heaters, it may be cold so be sure to pack an extra coat. **Covid Safe REFRESHMENTS** will be available at this year's sale.

SELLING SYSTEM: Sale of animals will be conducted under normal auction terms and conditions and will be interfaced online with AuctionsPlus. Please **register and complete the buyers training with AuctionsPlus at least 24 hours presale and log in early if bidding online.** Your livestock agent will assist and **PHONE BIDDING IS AVAILABLE if you prefer**—please contact any of the agents to organize. Your PIC must be supplied to the selling Agents to obtain a buyer's number. Successful purchasers must give written advice regarding transport arrangements, with cattle are available for delivery at the conclusion of the sale. The agents will assist with your transport requirements. All animals are sold exclusive of GST.

INSURANCE: Is available from the agents on the day. We strongly recommend insurance on your purchases.

DIRECTIONS: 'Coldawinda' is located 4kms south east of Tenterfield at 420 Scrub Road. Turn East off the **New England Hwy at Clifton Street**, on the Southern End of Tenterfield. Travel one block to turn right at the T intersection onto **Scrub Road**. Travel **4kms** on bitumen with 'Coldawinda' yards on the Right.

HERD HEALTH: All sale bulls are **tested negative PI** (Persistently Infected) and vaccinated against **Pestivirus** with **Pestigard** vaccine. They are fully vaccinated with 7 in 1 (for Clostridial and Lepto), Vibrio and 3 Day Sickness vaccine only requiring annual boosters. **Johnes Disease:** Alummy Creek Angus has over 20 years negative tests as a MN3 herd in the old JDMAP. We currently claim a JBAS 7. Our bulls are eligible to enter all states without further testing. Cattle Tick: Alummy Creek Angus is located in a cattle tick free area. Bulls can easily be held and blooded if required by arrangement. Parasites: Bulls were treated with Fasinex and Cydectin in May 2022.

MANAGEMENT: All Alummy Creek bulls carry a freeze brand for easy ID in the paddock. Alummy Creek sale bulls are quiet, well-mannered cattle used to being handled on foot, with dogs, ATVs and vehicles. They are rigorously screened for their temperament, but sale day places extra stresses on the bulls and this is no guarantee they will not misbehave under the pressure of sale day. Please assess the temperament of the bulls out in the pens vs on the few minutes in the sale ring.

FERTILITY: All bulls have passed a physical examination and microscopic crush side semen test.

GUARANTEE: All bulls are sold with a 6 month guarantee as a calf getter valid for 6 months from the sale date. The vendor must receive written notification together with a certificate from a registered veterinarian stating the nature of the infertility before the expiration of that period. Animals injured or lost as a result of accident, negligence or any disease, are not covered by this guarantee. Vendor liability relating to fertility claims will not exceed the purchase price of the animal and are limited to a credit equal to the purchase price less the salvage value which may be utilized at a future Alumy Creek sale. Check your bull purchases during the breeding season and talk to us if you think you have a problem.

SIRE VERIFICATION and DNA HDi50K TESTING: All bulls have been **sire verified (SV)** and **genomic HDi50K** tested. They can be used to breed registered calves without further testing. The performance recording and genomic results are single step incorporated into TACE Breedplan to produce Estimated Breeding Values (EBVs). Many bulls are in the elite top 1-2% of the Australian/ New Zealand drop for Angus and Angus Multi Breed seed stock. All bulls in the sale are free untested (FU) for the cattle defect genes AM, NH & DD. Talk to Lisa if you need more information.

HEALTH AND SAFETY OF VISITORS: Covid-19 safe social distancing and hand sanitizing must occur. **Visitors enter the pens of their own risk. Children under 16 years old and dogs are strictly not permitted at the sale.** The bulls are known to be of good temperament under normal conditions. However sale day is not 'normal conditions'. If you enter the pens, take note of your surrounds and be conscious of your safety. Do not crowd the bulls, or loiter in the pens. Please use common sense and be alert at all times. Do not be alarmed, but it is critical that visitors pay attention to the risks associated with cattle and the day.

SALE CATALOGUE DISCLAIMER: All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However neither the vendor, the selling agents nor Angus Australia make any representations about the accuracy, reliability or completeness of any information in this catalogue, including but not limited to pedigree, DNA information, EBVS and Index Values, and do not assume any responsibility for the use or interpretation, accuracy or completeness of the information included in the catalogue, nor for the outcome (including consequential loss) of any action taken based on this information. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDir	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
Selection Indexes	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Selection Indexes	\$D	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcass weight with 12mm P8 fat depth) at 16 months of age.	Higher selection indexes indicate greater profitability.
	\$D-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcass weight with 12mm P8 fat depth) at 16 months of age. The \$D-L index is similar to the \$D index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$D aims to maintain mature cow weight, the \$D-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$GN	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcass weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
	\$GN-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcass weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling. The \$GN-L index is similar to the \$GN index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GN aims to maintain mature cow weight, the \$GN-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$GS	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcass weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.	Higher selection indexes indicate greater profitability.
	\$GS-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcass weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements. The \$GS-L index is similar to the \$GS index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GS aims to maintain mature cow weight, the \$GS-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$PRO	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcass weight with 10 mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
	\$T	\$	Genetic difference between animals in net profitability per cow joined in a situation where Angus bulls are being used as a terminal sire over mature breeding females and all progeny, both male and female, are slaughtered. The Angus Terminal Sire Index focusses on increasing growth, carcass yield and eating quality. Daughters are not retained for breeding and therefore no emphasis is given to female fertility or maternal traits.	Higher selection indexes indicate greater profitability.

* The percentile bands represent the distribution of EBVs across the 2020 drop Australian Angus and Angus-influenced seedstock animals analysed in the Mid April 2022 TransTasman Angus Cattle Evaluation .

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.
 PV: both parent have been verified by DNA
 SV: the sire has been verified by DNA

Trademark Earnan L65 type stacked for great longevity and production in his cow family line. Very long bodied bull, powerfully built and one of the youngest in the draft. Very smooth muscled, thick strong topline, deep bodied with well sprung rib, clean sheathed, good skin and slick coated. EBVs hampered by age of his 12yo dam but still powerful top 13% 200D growth, top 30% 400D and 600D growth, carcase yield, and feed efficiency plus top 36% carcase wt. If you want heavy muscled slick coated black hided weaners or want to rebuild your herd with productive females that last dont miss this young calf. Very good bull.

TERMS AND CONDITIONS OF SALE

- Terms are strictly cash or approved cheque on the day of sale, unless prior arrangements have been made with the Auctioneer before the fall of the hammer.
- Subject to the reserve price, the highest bidder shall be the purchaser.
- In the event of a disputed bid, the auctioneer shall be the sole arbitrator and his decision shall be final.
- The auctioneer may refuse to accept any bid, which, in his opinion, is not in the best interest of the vendor and shall have the right to refuse any such bid without giving any reason.
- Where the vendor reserves the right to bid at the auction in respect of a lot and instructs the auctioneer to make more than one bid on his behalf, the auctioneer shall, prior to submitting the lot for sale by auction, announce in a clear and precise manner the number of bids reserved by the vendor in respect to that lot.
- A bidder shall be deemed to be a principal unless, prior to the bidding, he has given to the auctioneer copy of written authority to bid for or on behalf of a person.
- The last price called by the auctioneer shall be the amount at which the lot has been sold.
- A bid cannot be made or accepted after the fall of the hammer.
- All lots will be at the purchaser's risk immediately after the fall of the hammer and no responsibility will be incurred by the auctioneer or vendor for their safekeeping. No exceptions shall be taken to any of the lots on delivery the whole having been open for inspection by the purchaser prior to the sale and on no account will any allowance be made.
- Every person on the auction premises before, during and after the sale shall be deemed to be there at his own risk and with notice of the conditions of the premises. Such person shall have no claim against the auctioneer or vendor in respect of any injury sustained or any accident, which may occur from any cause whatsoever.
- All cattle will be sold GST exclusive. GST will be added to the purchase price.

A 2% Outside Agents Rebate is available to Licensed Agents introducing purchasers in writing 24 hours prior to sale and settling on their behalf within 7 days of invoice.

BRINGING YOUR NEW BULL HOME

WHEN PURCHASING A BULL, CARE AND HANDLING AFTER THE SALE CAN BE AS IMPORTANT AS THE PURCHASE ITSELF.
LOOKING AFTER YOUR BULL WELL DURING THE INITIAL STAGES OF HIS WORKING LIFE MAY ENSURE LONGEVITY
AND SUCCESS WITHIN YOUR BREEDING HERD.

PURCHASE

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament shown in the ring.

DELIVERY

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering. After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed. Treat bulls kindly your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

IF YOU USE A PROFESSIONAL CARRIER:

- Make sure the carrier knows which bulls can be mixed together.

- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning .

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.

MATING NEW YOUNG BULLS

MANAGING OLDER HERD BULL

DURING MATING

NORTHERN AUSTRALIA

BRINGING YOUR NEW BULL HOME

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later. Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

NORTHERN AUSTRALIA

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

ADAPTATION

The key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

PURCHASE IN COOLER MONTHS

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

CHANGE OF FEED SOURCE

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

MANAGING CATTLE TICKS

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.
