Supplementary Lot 17A

Wallawong Silver Bullet S1

DOB: 8/5/21

Colour: Silver

Sire: Woodbourn Paringa P49 (4W P49)

Dam: Bundaleer Antoinette H48 (JOS H48)

Comments: A young sire with an outstanding pedigree. His dam is an elite embryo cow with calves in 4 countries. Here at Wallawong, we have retained all but 1 of her daughters, sold a son into the Karmoo Brahman herd, and retained her 2019 drop son. A half maternal brother was the Reserve Junior Champion at this year's Sydney Royal Easter Show. He is a bull that was born very light and is continuing to grow into a useful sire. He has had the same vaccinations and testing as all other bulls.

His expected average progeny values are shown below.

| CE Dir | CE Dtrs | B Wt | 200D | 400D | 600D | Mat Wt | Milk | Car Wt | EMA | Rib Fat | Rump Fat | RBY | IMF |
|--------|---------|------|------|------|------|--------|------|--------|------|---------|----------|------|------|
| -1.5 | -0.6 | +3.4 | +26 | +45 | +63 | +70 | +7 | +40 | +1.4 | -0.1 | +0.0 | +0.7 | +0.4 |

DNA / Testing

Bulls

Lot 19 – DNA profile, sire verification and pesti testing was missed as he was joining cows at the time of hair collection. Pesti test result due Friday or Monday/Tuesday. Bull can stay at Wallawong until expected negative result obtained. DNA profile and sire verification is pending, advertised parentage forms part of sale if sold for stud use. Result expected in 2-4 weeks.

Embryos

Lot 46 – Donor female DNA profile is pending. Sold with guarantee of donor sire verification and profile.

Females

Pregnancy Status

The following lots were confirmed pregnant on 13.6.22 – Lots 61, 62, 63, 64

Lot 65 was manually vendor tested as most likely PTIC, crush side hormone test showed a weak positive. Second hormone test has been sent to lab for confirmation. Result expected on Friday or Tuesday. Female being pregnant forms part of the sale of this lot.

Lots 56, 57, 58, 59, 60, 66, 67 were manually vendor tested as not pregnant and have never been exposed to a bull/AI.

Declaration

Lot 58 had pink eye several months ago, her right eye has not healed as expected and still has some visible scarring. It is expected to continue to heal, but some slight vision loss may be permanent.

Myostatin NT821

We have been using the advantages of NT821 for many years now and it is a large factor in our continued carcass competition success. Carrier cattle offer superior carcass yield and dressing percentage. With the advent of better and more affordable DNA testing, we have tested all the silver/grey bulls in this sale so that clients can make informed decisions about using NT821. Our recommendations for the use of NT821 are that it creates extra profitability through better carcass composition, shape and yield when used in cow herds. Unless the NT821 status of heifers is known (ie pure bos indicus or low population British breeds, or tested), we recommend using bulls that are non-carriers of NT821 for heifer matings. The test results of lots 1-17A are shown below, the black bulls were not tested as we believe that they are all non-carriers. If you have any questions on how best to utilise NT821 please talk to Lachlan.

NT821 Carriers – Lots 1, 3, 5, 8, 9, 10, 17 NT821 Non-Carriers – Lots 2, 6, 7, 11, 12, 13, 14, 15, 16, 17A
