ANDREW ORMAN

0427 435 201

As many of our friends and clients would know this has been a trying year for our family with the death of our beautiful son Sam, of whom many of you would have met at previous sales. It is hard to see anything positive in these situations in life, but life is for living and must go on. The one thing I do know is Sam would have wanted our family to keep doing what we love doing, so you will not see our breeding program suffer, if anything in times of adversity we tend to place more emphasis on the activities we love. So, in Sam's Honour it will be onwards and upwards for the Benelkay Stud.

Andrew, Jules, (Sam) and Georgie are pleased to extend an invitation to you to attend our 11th annual Benelkay Poll Santa Gertrudis Bull Sale on Thursday the 18th of August 2022 at 1.00pm on property "Glenmore" Mullaley. This is the final day of Ag-Quip this year, so accommodation should be readily available in Gunnedah and surrounding towns.

We are pleased to present to you our line-up of Poll and four outstanding Horned Santa Gertrudis bulls, responding to clients who, for a range of reasons need to be able to purchase polled and horned bulls to suit their operations. I feel confident with the overall quality and evenness of the sale team, with an outstanding number of Yarrawonga M134 bulls represented in the sale draft. We are very proud to offer this year's group of sale bulls and feel they are of the highest quality we have offered, mostly due to the high standard of our own sire battery we are using over our 400 stud cows.

We are offering a range of types of bulls to suit different market requirements and realize not all bull buyers are looking for the same type of bull for their operation. We have aimed to keep abreast of the beef industry and have made considerable investments in poll sires in the past fifty years to produce seed stock bulls to suit both the commercial and stud sectors. We have started using our own Homozygous Sires to increase this trait within our own female stud herd, with very pleasing results.

All bulls will have BreedPlan figures to assist you in the selection of the sire to suit your breeding objectives. Also, what must be realised is that we buy in all our sires from non Breedplan herds, as these bulls have many other traits we are chasing in our herd, and we need to have other genetics coming into the system of Breedplan. The downside of this consequence is it does take a few years to get reliable data on the un-Breedplan, non – proven Breedplan bulls. Due to this most of our sires start below breed average for all their data so it does take a while to get the amount of progeny on the grown and tested to get the accuracy of the Breedplan traits comparable to herds only using Breedplan bred sires.

We will also have raw data figures for weight, DWG, scans for EMA and Fats. All bulls are semen, morphology (Laboratory Morphology examinations done by QMSL - Goondiwindi) and vet tested by Mark Baker, Gunnedah Saleyards Veterinary Clinic. Our aim is to provide paddock reared fit and healthy bulls, so cattlemen can be confident in their bull purchases. You can view pictures of the sale draft at www.benelkaysantas.com.au or contact Andrew 0427 435 201 directly for more information or to arrange inspections presale if you feel that it will assist you. Looking forward to catching up with you all on sale day.

Kind Regards

Andrew Orman

AuctionsPlus

How to Register and Bid on AuctionsPlus

1

Go to www.auctionsplus.com.au to register at least 48 hours before the sale.

2

Select “**Sign Up**” in the top right hand corner.

3

Fill out your name, mobile number, email address and create a password.

4

Go to your emails and confirm the account.

5

Return to AuctionsPlus and log in.

6

Select “**Dashboard**” and then select “**Request Approval to Buy**”.

7

Fill in buyer details and once completed go back to Dashboard.

8

Complete buyer induction module (approx. 30 minutes).

9

AuctionsPlus will email you to let you know that your account has been approved.

10

Log in on sale day and connect to auction.

11

Bid using the two-step process – unlock the bid button and bid at that price.

12

If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

Email: info@auctionsplus.com.au

Health - Vaccinations

7 in 1, Vibro, AD&E and Multimin Vaccinations have been done on the 25.01.2022 and 4.06.2022. All sale bulls have received two shot this year and should receive a booster to fall into your own breeding program.

Benelkay stud is located in a Bovine Johne's disease protected clean area. There have never been any traces of this disease detected at our stud's properties. We have completed a Grazing Manual Biosecurity Template, version 1.1 before the 30/06/2017. There has been veterinary oversight into the development of our biosecurity plan, as we aim to remain a J-BAS 7 score.

Treatments

All bulls have been treated on the 25.01.2022 with Ivomec pour and on 4.06.2022 with Ivomec pour on.

Feeding

The Sale Bulls have been running together in a large mob of about 100 male cattle since weaning. From January 2022 they have been run in a sale mob of bulls of around fifty, in last season's wheat stubble. Since 1st April they have been run on subtropical grass with access to Wheat Stubble Hay, Palm Kernel and 20% cracked Barley. Since the 25th of June to sale time, they will be running on Oat paddocks with access to wheat stubble Hay, Palm Kernel / Cotton Seed and 20% cracked Barley.

Handling

All bulls are handled with four-wheel motorbikes and dogs. Our bulls have never been handled with horses. All bulls are quiet but as we all know they can react differently when put into pressure situations or different surroundings, particularly on sale day or being transported as they have never left the property.

Semen / Morphology Tests

All bulls have been evaluated for breeding soundness and semen tested by Mark Baker, BVSc & Associates of Gunnedah Saleyards Veterinary Clinic. Testing will be done over two days 10.07.2022 and 12.07.2022. Morphology testing has been carried out at the Goondiwindi Laboratories QLD. Individual morphology results will be available on sale day.

Scanning

All bulls have been scanned for EMA, Fat (Rib, Rump, IMF%) and Scrotal Size Measurements, by Bovine Scanning Services (Lonnie Stone). This will be carried out in early-August 2022. The raw data will be available a few days before our sale day and on our web site as well as on sale day.

Inspections

Inspections are welcomed anytime. Bulls will be yarded by 9.00am on Sale day. Pre-sale day inspections can be arranged by contacting Andrew Orman on 0427435201 or Elders Gunnedah. Supplementary sheets containing all relevant bull information will be available a few days prior to the sale and on sale day. If you would like a copy emailed to you please contact Andrew or visit our website or Facebook page to download a copy, a few days prior to sale day.

Insurance

We have arranged for company insurance representatives (Elders and WFI) to attend the sale and we highly recommend that buyers insure their purchases from the fall of the hammer.

Rebate

The vendors offer to pay a 2% rebate to outside agents who introduce their clients in writing to them 24 hours prior to the sale and settle in full on their behalf within 7 days of the sale.

AuctionsPlus

The sale will be interfaced with auctions plus, for clients that cannot attend on sale day, please organize with your agent at least 24h hours prior to sale day. Phone bidding can be organised through Elders Gunnedah, contact Jon Glover 0428 486887 Nick Hannaford 0417 201460 or Brian Kennedy Elders Stud Stock 0427 844 047, there is good mobile phone reception at the bull sale venue.

Air Strip

An all-weather air strip is available 5km from the sale venue, to use this please contact Andrew Orman.

Accommodation We recommend

Gunnedah:* Accomodation Limited *

Delivery

Please fill out all details in the delivery slip at the back of this catalogue, and organise with Elders post sale before you leave, to aid in the delivery of your bulls. Delivery can be on sale day. If you wish to have another delivery date please contact Andrew Orman or Elders Gunnedah team. The vendors will provide all care with your purchases but will not be responsible after the fall of the hammer for any injury to bulls.

Transport

Local carriers have been contacted and will be present on sale day. Please look for advertising within this catalogue.

Breeding Guarantee

We have taken a lot of time and effort to ensure we are presenting fertile bulls for sale that are structurally sound to the best of our knowledge, we want good results from your investment, as do you. If you have any issues with your purchase please contact us, we are willing to work together for a resolution acceptable to both parties for any reasonable claim that is made in a reasonable time frame.

Catering / Refreshments

The local Emerald Hill Progress Committee will be catering for the day along with The Coffee Float Gunnedah.

Risk & Responsibility

Any person attending the sale, do so at their own risk. The vendors assume no liability, legal or otherwise for any injury, accident, loss or damage to any person or property.

Disclaimer

The vendors and agents have produced this catalogue with accurate information, however will not be responsible for any errors or omissions.

GST

Prices for lots sold will be GST exclusive at the fall of the hammer and 10% will be added at time of invoicing.

Directions to Benelkay Poll Bull Sale, at “Glenmore”, Mullaley,

With navigators use Keechs Rd Goolhi as a reference point, with google use Benelkay Santa Gertrudis Stud.

From Gunnedah.

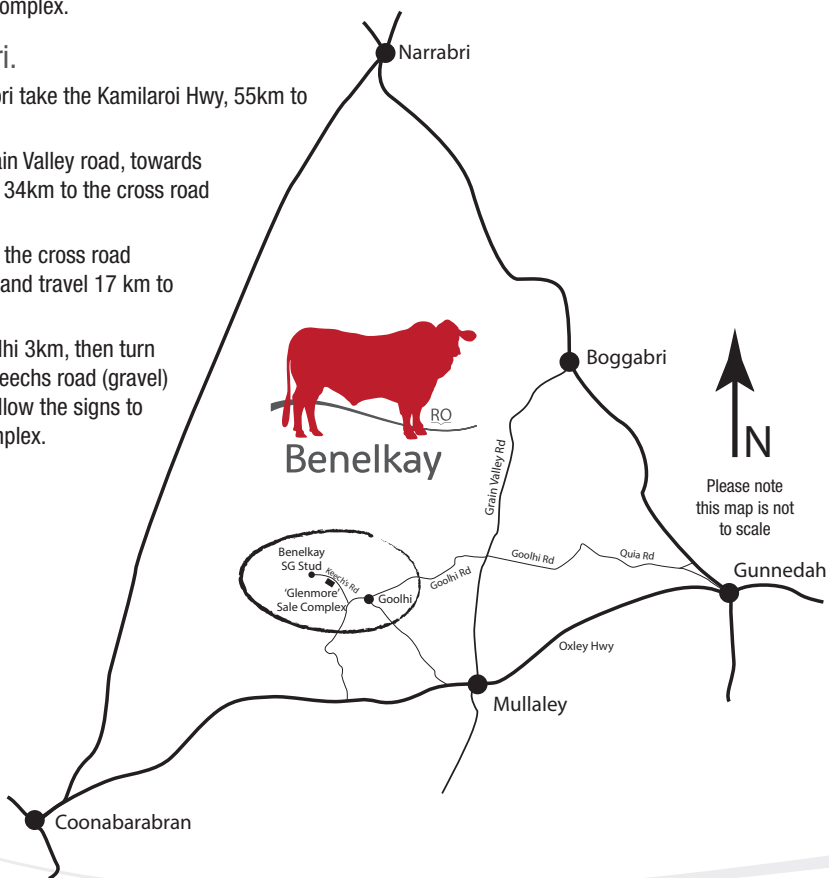

- From Gunnedah take the Oxley Hwy, 34 km's to Mullaley.
- Pass through Mullaley on the Oxley Hwy and travel 5km's towards Coonabarabran, then turn right onto the Booloola road, to Goolhi.
- 15km to Goolhi, turn Left and go 3 km, then turn Right onto Keechs road.
- 6.5km on Keechs road, (gravel) and follow signs to the sale complex.

From Coonabarabran.

- Take the Oxley Hwy 54km towards Mullaley; turn Left off the Hwy to Goolhi.
- 10km down the gravel road, turn Left, as you come onto the tar, onto Keechs road (gravel).
- Go 6.5km on Keechs road; follow the signs to the sale complex

From Narrabri.

- From Narrabri take the Kamilaroi Hwy, 55km to Boggabri.
- Take the Grain Valley road, towards Mullaley, for 34km to the cross road intersection.
- Turn right at the cross road intersection and travel 17 km to Goolhi.
- Go past Goolhi 3km, then turn Right onto Keechs road (gravel) go 6.5km follow the signs to the sale complex.

Poll Gene Marker test

The Australian Poll Gene Marker test was initially developed by the Beef CRC and released to industry in 2010. The initial test was based on a single DNA marker and worked very well in some breeds, but not so well in others.

The test was further developed by the CSIRO, with funding assistance from Meat and Livestock Australia, and a greatly improved test was released in 2013. The improved Australian Poll Gene Marker test uses the same marker as the initial test but also incorporates information from nine other markers close by in the genome. The genotype information from all ten markers is combined to create a 'haplotype' to more accurately track the origin of alleles and associate them with being horned or polled. The additional marker information increases the proportion of animals for which the test returns an informative result, and also increases the accuracy of those results.

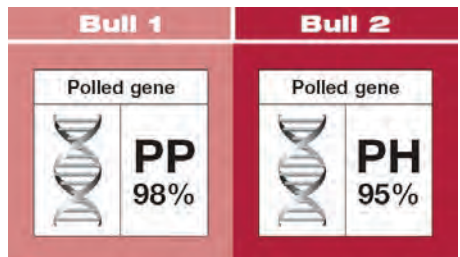

Breeders who are able to apply a level of selection pressure to their cow herd can also use the same philosophies that have been outlined for bulls. Retaining only polled or scurred females will increase the frequency of polled genes within the herd, while giving priority to polled females that have been identified by DNA test as being homozygous polled will maximise the rate of polled gene introgression into the herd.

Importantly, breeding for polledness should always be balanced with selection for other traits of economic and functional importance within the breeding objective. Simply selecting for polledness without any consideration of other important traits is not recommended as it may potentially compromise the genetics of animals for these other traits.

An example of the test result is displayed above right. The results will describe the percentage chance of the most likely genotype, with the possible genotypes being reported including homozygous polled (PP), heterozygous polled (Ph)

or homozygous horned (hh). The accuracy of the test result will be reported alongside the most likely genotype. This accuracy will range from 90% to 99%. For animals where the test cannot return an informative result (that is, the accuracy of the prediction is less than 90%) the result will be returned as ND (Not Determined).

For further assistance in understanding the genetics of polledness, or the use of the Australian Poll Gene Marker test, contact staff at Southern Beef Technology Services (SBTS) or Tropical Beef Technology Services (TBTS).

Looking after your new bull

We have put a lot into getting your purchase ready with breeding and management and now it is up to you to continue to prepare your considerable investment for the future.

The following are a few tips:

- At auction sales, remember that possession is yours after the fall of the hammer.
- We recommend that you insure your bull - it is a new asset to your property.
- Pen bulls on the truck from different vendors / properties separately.
- Handle him quietly at all times, no buzzers have been used on these bulls.
- Have some cattle in the yard for company to run him with for a week or so to get acquainted to your property. All will be strange to him as he has been taken from his mates and even the water and feed will be different as well as your environment.
- Check the health treatments he has had and that they are appropriate to your area and treat with anything additional you think he might need after he has settled in.
- At joining it is preferable not to mate young bulls multiply with older sires, as they will not allow the young bulls near the cows and they could get injured.
- Try and get him to his selected group of cows preferably in a group with other cattle or bring the group to him.
- Check him regularly, seeing he is walking well, no swelling of joints or in his sheath, if possible that he is serving and that not too many cows are returning to heat.
- If you suspect any problems occurring quick action may cure a problem before it escalates.
- Have a spare bull or bulls available to cover

any break downs, do not give the young bull increased numbers of females to cover other breakdowns within the herd. Also young heifers may be in heat for less time than cows and you will need more bulls to cover them.

- After the joining remove him and give him any health treatments such as for internal and external parasites and any vaccinations appropriate to your conditions.
- Give him every chance to grow out and develop after his first joining as your Santa bull will continue to grow and be cutting teeth, for at least a further twelve months.
- Annual pre joining vet examination will help with your next joining results.
- Bulls are a large investment for any breeding herd and they have a major effect on herd fertility. A little time and attention to detail to make sure they are fit, free from disease and actively working is well worthwhile and can deliver huge results to our agricultural businesses.

If you have any queries or problems please contact us as soon as you can so that we can assist you.

Joint Breeding Objectives

Our breeding objective is to produce structurally correct moderate framed Polled Santas, balanced in fertility traits, weight traits, muscling and fat. Always mindful of maintaining an easy doing functionally efficient and fertile herd, with a broad genetic base to meet the current market needs of our clients and to improve the profit in their operations.

To achieve our objectives we employ the following strategies:

Fertility

- We don't pamper the stud cow herd; they are run on a commercial basis, in conjunction with cropping. This strategy indicates the cattle that will perform especially for fertility and gives clients confidence that the sires they purchase will perform in any climate.
- Semen and morphology test bulls and use as high a quality tested bull that meets our breeding objectives.
- Maintain soft fine haired cattle. These perform better in our climate and are more fertile.
- Select for cattle with above breed average fat. Fat is important for carcass coverage (MSA), doing ability leading into better fertility.
- Keep a balance between milk and fertility traits.
- Identify sires that have excessive birth weights.
- Select for cattle with tidier sheaths. This gives us much better fertility in both bulls and females also complying better with the MSA requirements.

Maturity/Meat Quality

- Select for moderate framed cattle with above breed average young growth.
- Select cattle that are able to perform well in a range of markets for clients.
- Our style of Santa Gertrudis cattle are able to target the vealer market, the feed lot and all the way through to the bullock trade.
- Select for quiet temperament for handling and meat quality issues.

Informed decisions

- All cattle are performance recorded for as many traits as we can manage, keeping in mind commercial considerations. E.g. we don't scrotal score all male calves as we castrate most of our culls before weaning.
- Performance data is used in mating decisions to produce balanced progeny.

BENELKAY STUD

History:

In 1963 the Benelkay herd had its beginnings situated west of Walgett as a cross breeding operation, started by Andrew's parents Dick and Dianne Orman. The cow herd was based on Weebollabolla Shorthorn cows and Santa Gertrudis Bulls, mostly of Wave Hill, Gyranda, Ameroo, Kalinga, Pampoola, Marengo, Murrumbo and Yarrawonga bloodlines. In 1970 the Benelkay stud was registered with the SGB(AA) and became Stud number 810. With the select purchases of stud cows and the existing commercial line of straight Santa Gertrudis cows, the stud had a good genetic base to form the early stud and grow it into what it is today.

Today the Benelkay Santa Gertrudis Stud is run on "Glenmore" and Tuppence", located 34km North West of Mullaley, in the Goolhi district, or 68km West of Gunnedah. "Glenmore" is a 1650 Ha property comprising of gently undulating to hilly country with a mixture of heavy black basalt, red clay loams and sandy soil types." Tuppence" is a 730 Ha property situated next to Glenmore, and was originally part of the historic Goolhi Station, that once covered most of the North Western side of Mullaley. Tuppence is the location of the new Benelkay Sale Complex that was built for our second annual sale. The stud has become our passion some say obsession, and something that we enjoy as a family with our two children Sam and Georgie helping and being involved when they can.

Stud Focus:

With a strong genetic base of 400 classified stud cows. Benelkay is well placed to breed cattle to suit the modern-day commercial cattleman. With a strong emphasis on poll cattle that can have the ability to enhance the carcass traits in the stud and commercial cattle industry. We have selected and used only poll sires for over thirty years giving us a large genetic poll base to draw from. This year's sale team will have twenty Homozygous (PP) bulls represented which gives the

industry an opportunity to be able to purchase sires to fast track their own herds towards poll genetics. These results will be on the supplementary sheet or ring us presale. The Benelkay stud is run on a commercial basis with no favouritism. With years of work going into the fertility, temperament and the need to breed cattle that are soft, easy doing and are saleable all year round we have found this style of cattle can compete with and better other breeds, but still retain the excellent attributes of the Santa Gertrudis Breed. We have found over time that moderate cows have the best fertility, and we can move a little each way with size to suit the needs of most beef markets. Our entire herd is performance recorded, all stud and commercial cows with Santa Gertrudis Group Breedplan. We find Breedplan, a useful tool in our herd selection, as well as using visual assessment. Both tools enable us to make fast gains in the desired traits we believe our herd needs to be achieving.

Sires in the past years making an impact on our stud's direction, have been, Sanford Vale Juggler (P), Wave Hill F73 (P), Wave Hill Napperby (P), Bullaminkinka H82 (PS) and Bullamakinka Dreamtime (P). Also, SuJo First Class (P) who has proved to be a wonderful sire, taking the stud forward in the direction, we believe the industry needed to be heading. His progeny has had a huge impact within the stud, and we are still benefiting from his strong bloodlines.

Every year we try to bring new genetics into the sale for our clients. This year we are proud to introduce new Sire Drensmaine Gardener (PS), he has introduced fresh genetics within our herd and has contributed to the sale team very positively.

I feel there needs to be special mention of Yarrawonga M134 (PS) as he is having a massive impact within our stud. The phenotype he is producing along with his fertility is outstanding. Out of all stud breeds recorded in 2021 he finished third for the most calves recorded (by natural service) within a twelve-month period (90 head) and was the number one Santa Gertrudis Bull within the breed for registered calves

Refernces Sires 2022

BURRAMURRA BOSS 152 (PP)

Boss a Homozygous poll was purchased as a led bull at the 2016 Santa Central Sale for \$17,000. Weighing 891kgs at 22months with a DWG of

200D	400D	600D	Mat. Cow	Milk	SS	Carcase WT	EMA	Rib	Rump	RBV	IMF (%)
+10	+0	+20	+17	+0	-0.8	+5	+3.5	-0.7	-1.3	+1.7	-0.3
90%	88%	87%	76%	32%	84%	67%	57%	67%	66%	50%	65%

1.30kg, Scrotal of 40cm and an EMA of 122. After watching him win his class at the Ekka we thought we would purchase him for his out cross genetics, growth, tropical dark skin type and quiet temperament. Boss has grown into an eye appealing sire, great thickness and good depth with plenty of scale. He has thrown progeny with strong breed character, and we are seeing the strong results through his

females in the breeding program. Boss produces exceptional females with scale and breed phenotype. We are pleased with both his male and female progeny. Top priced son to date is Benelkay Quatermaster Q012 (P) selling to Jock Cunningham "Hallcraig Santas" for \$30,000 in 2021. Benelkay Newman (PP) has been also kept as a sire with progeny in next years sale.

Sire of lots 2,19,21,26,30,38

BENELKAY LUCKY L114 (PS).

Lucky carries strong Santa Gertrudis phenotype, naturally placid temperament, exceptional length, volume of carcase with strong width over his top line and good neck extension. At 25 months he weighed 946kgs, 1.26 DWG, Morphology of 83%, Scrotal 39cms, 127 EMA and 5.5 IMF. We kept this bull as we felt he was the best bull in the 2015 drop and had explosive weight gain and growth for age. His dam 1861 (P), a cow that goes back to Benelkay Hardi (P) (selling for \$30,000 in 2006 to Dangarfield Stud). He has not let us down

breeding consistently well, producing dark red quiet progeny with length. His top priced son in 2020 was Benelkay Pearl (PP) selling for \$11,000 to Grassbrook Pastoral.

200D	400D	600D	Mat. Cow	Milk	SS	Carcase WT	EMA	Rib	Rump	RBV	IMF (%)

Sire of lots 1,44

YARROWONGA M134 (PS)

Purchased at lot 4 for \$38,000 in the 2017 Yarrowonga Waco Annual Bull Sale. M134 (PS) a son of Waco Zeus, at 25 months had a 93% morphology, 40cm Scrotal, 1.20 DWG, EMA 121 and weighed 900 kg's. Purchased

200D	400D	600D	Mat. Cow	Milk	SS	Carcase WT	EMA	Rib	Rump	RBY	IMF (%)
+19	+28	+31	+38	+2	+0.0	+14	-1.6	-1.4	-2.1	-0.9	+0.0
87%	86%	87%	76%	36%	81%	69%	61%	70%	69%	54%	68%

for his Santa Gertrudis phenotype, thickness, depth, heavy bone and quiet disposition. M134 is proving to be our go to sire, he has exceptional fertility siring over ninety calves in a single season.

Placing him as the top sire for progeny recorded in one season within the Santa Gertrudis Breed. He has developed into a mountain of a bull and is breeding exceptional progeny both male and female. His classification rate of his progeny is well over 90%. He is producing what we are aiming for with his consistency of breeding quality, strong poll cattle that carry all the attributes producers are looking for in Santa Gertrudis. Top priced son to date is Benelkay Qatar Q076 (PS) sold to Donoghue Farms for \$18,000 in 2021.

Sire of lots 3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,23,28,29,35,36,40,41,45,46,47

BENELKAY HOT SHOT H074 (PP)

We retained this Sire from our 2012 H drop bulls. Backed up by his EBVs trait leader for 400,600 Day Growth, Carcase Weight and EMA. Being Homozygous poll with a morphology of 96% as a two-year-old, we felt we could not sell a bull of his calibre. He carries strong Sire appeal and breed phenotype, a soft dark tropical skin / hair type, with length, depth and strong bone. Hot Shot comes from a strong female line within our cow herd that have breed consistently above average cattle going back at least six generations. His son Benelkay Lucky (PS) has been kept as a sire. Son Benelkay Noteworthy (P) sold for \$16,000 in 2019 to David and Annie Beare, Rangelands SGS.

200D	400D	600D	Mat. Cow	Milk	SS	Carcase WT	EMA	Rib	Rump	RBY	IMF (%)

90%	86%	88%	85%	67%	86%	74%	66%	73%	72%	60%	73%

Sire of lots 22

DRENMAINE GARDENER G154 (PS)

Drensmaine Gardener G154 (PS), was purchased at the 2020 Barcoo Santa Gertrudis Bull Sale at Blackall. Purchased for his out cross genetics and high Fat rib/rump figures. A strong dark poll with above average thickness we felt he would suit our breeding objectives well. Gardener has produced lovely females with plenty of breed type and softness and has shown he is more of a maternal style of sire in his progeny. There is a small number of his sons in the sale team this year as we unfortunately lost him early into his first joining due to a bull fight. We feel they are a similar style of bull to their sire and could be used with confidence over heifers as they were very small calves when they were born.

200D	400D	600D	Mat. Cow	Milk	SS	Carcass Wt	EMA	Rib	Rump	RFY	IMF (%)
+7	+14	+17	+10		+1.0	+2.0	+1.6	+1.4	+0.1	+0.3	
65%	69%	62%	55%		61%	40%	48%	47%	35%	47%	

Sire of lots 20,24,25,27,31,32,34,37

MULTIMIN[®]

Injection for Cattle

OPEN THE WINDOW OF PRODUCTIVITY AT DRY OFF AND BEFORE CALVING.

Deliver essential trace minerals quickly when they have the most impact.

MULTIMIN[®] is a multi-mineral injection designed to be used at critical times in the production cycle, including at dry off and before calving. The 60 days before calving is an important window of productivity because during this time, the trace minerals in Multimin can assist in the development and health of the calf and help cow health after calving.

- Contains selenium, copper, zinc and manganese, trace minerals that are essential for normal immune function and improving disease resistance.
- A healthier herd means a healthier bottom line.

Contact your local area sales manager today.

MULTIMIN is a registered trademark of Virbac (Australia) Pty Ltd.

COMMENTS:

Rolls Royce (P). Youngest bull to be offered so far, but he deserves his spot this high in the sale team. Very stylish dark coated young bull with nice breed type. Breeders recommendation for a top line heifer bull. Out of a very strong line of females within the Benelkay stud going back seven generations. Dam K007 (P), has had six calves with one daughter retained within the stud.

Stud Ultra Finish

Premium Finisher Pellet for Stud Cattle

High energy, high protein (16%) - high quality pellet designed specifically for Stud Cattle.

Formulated for optimal growth rates, muscle definition and shiny coat.

Very safe to feed – reduces issues with acidosis, laminitis and bloat.

Very high, balanced vitamin and mineral profile – designed with fertility in mind.

An ideal product to be fed in with green pasture such as oats to minimise scouring, while providing the finish and glossy coat on stock.

Also available:

- Stockfeed
- Dry Lick Supplements
- Protein Meals and Concentrates
- Bulk, bulk bag or bagged
