WELCOME

Hello and welcome to our 8th annual sale and thank you for taking the time to read our catalogue and for considering the Cree Stud for the purchase of your next sire/s.

What a pleasure it is not to have to talk about how tough the preceding season has been. For the first time in 8 years of welcome letters, I can say I think our country is as good as it has ever been at this time of year.

The good season in most areas is aiding the herd rebuild again this year, with most producers we talk to retaining and joining all available females. Once again, this has seen an early demand for private sale bulls, with producers keen to shore up at least some of their requirements before the auctions commence.

This year marks the 55th anniversary of purchasing the first Santa Gertrudis bulls introduced to the original foundation herd and the 22nd year since Cree stud's official registration.

Those 22 years have seen us build a dedicated breeding program for docility, balance, and moderation. Our objective is to mitigate risk by producing genetics capable of lifting performance across the range of profit-driving traits simultaneously, namely growth, fertility, and carcass, without compromising other equally important phenotypic attributes. Our focussed genetic selection and complimentary joining program over that same 22-year period has progressed our herd to where we now see predicted positive performance in animals across multiple, sometimes contradictory, traits.

Recently I attended the Repronomics Field Day at Gayndah, where some of the results of the trials were released. There were many interesting findings on display but particularly pleasing for us were some results from Cree Ferrero M176 (P), that the project purchased from the 2017 sale. His heifer progeny was 2nd for Santa Gertrudis and 4th overall for the average age at puberty, while his steer progeny in the Northern BIN project topped the average carcass weight. This was from a mob of 155 steers born within 3 months of each other, backgrounded together and killed on the same day. These impartial, unprejudiced, objective results give us confidence in our program and the performance recording systems we utilise.

Beef's bull run has entered its third consecutive year, and while some pundits had predicted that, my own sense of self-preservation hadn't allowed me to believe it. On this occasion, I'm pleased to say they were right. While the market of late has plateaued, this new normal for cattle prices is being somewhat tempered by the ever-increasing price of input costs.

This is where genetic change versus management changes. While there are ways to increase profitability through management practices, these invariably come with raised input costs. Buying bulls is a necessary yearly management cost that can be capitalised on by careful bull selection.

This year we have catalogued 77 bulls and see the last natural sons of some of the cornerstone bulls the stud has utilised over the previous decade, namely, King, Ferrero, and Hercules. Also catalogued are the last sons of Manuka and Morocco. These sires are ably replaced by their own legacy in sons, Northerly, Normandy and Nemesis, themselves all trait leaders for various traits, along with Nacho and the first sons of Jackaroo, Ponga and Papalii.

The classification was later than usual this year, and cataloguing had already begun, so this year, we have herd bulls scattered throughout the line-up rather than together as in previous years.

The catalogue again features the EBV bar graph for a simplified analysis of each bull's performance. We hope this information assists in your selection processes for the best genetic package for your business and mitigates some of the risks in selecting for a single trait gain. The average Cree sale bull this year ranks in the top 20% of the breed for both Domestic and Export \$Index.

We welcome the new owners of Monto Cattle and Country, Kellco Rural Agencies, as agents, along with Elders again this year.

Inspections are welcome anytime, so please contact the above agents or ourselves if you require further information or assistance. We are available to assist you in selecting suitable bulls for purpose, be that heifer joining, docility, carcass, or any other stipulations or parameters you may have.

We look forward to catching up with you on sale day or before.

Kind Regards,
Shaun & Jo McGuigan

ORIGIN of the CREE NAME

In 2018, Jo, Jed and I travelled to the United Kingdom for a pilgrimage back to the roots of the Cree name.

We started by visiting the Cree Lodge Racing Stables in Craigie Road behind the Ayr Racecourse in Southern Scotland. The Ayr Racecourse is the premier race track in Scotland and is home to the Scottish Grand National and the Ayr Gold Cup. Unfortunately, we were about three weeks early for the Grand National.

The house which has been restored was still there, but the stables which have now been resumed for housing were replaced with multi-level residences and has been re-named Cree Lodge Court. It was the home of my Great Grandfather's cousin, John McGuigan, in the early 1900s.

When my Great Grandfather emigrated to Australia circa 1890, they settled at Coff's Harbour and named their first place "Creeseid." Ever since the name has been a part of the McGuigan cattle and country scene in Australia.

My grandfather's dairy farm at Westbrook, Toowoomba, was named "Cree Farm," my Grandmother's house in Toowoomba was simply "Cree", and my father called one of his properties on the Lawgi plateau "Cree Vista."

Cree comes from the River Cree, which travels from Loch Moan through Newton Stewart below the Galloway Hills and enters the Solway Firth at Creetown. We stayed at the Creebridge House Hotel and drank at the Cree Inn to round the trip.

John McGuigan's home, Cree Lodge, Ayr

Shaun & Jo at Cree Lodge in March 2018

Cree Bridge

Thank You

Shaun & Jo feel very privileged to display brands on the Cree Pub wall. These brands provide a historical record of the properties where the Cree sires have gone to.

If your brand isn't displayed and you would like to be a part of the history at Cree, please bring your branded board with you to the sale.

Branding boards will also be available on sale day if you haven't received one.

HISTORY

1930 John Richard (Dick) McGuigan ran Hereford cattle on predominately open forest country at "Kooyong" Monto in the North Burnett. The early 1940s purchased a line of Hereford cows from the Hutchinson family of "Woolton Stn", Theodore, who sold a line of stud bulls yearly alongside their commercial operation.

C.1943 These were the foundation breeders along with a line of stud cows and heifers purchased from Ernie Zillman from the Old Rawbelle Poll Hereford Stud Eidsvold. Stud bulls were also sourced from the Brisbane Exhibition stud sales.

1952 Tom Pownall (Dick's brother-in-law) purchased a Santa Gertrudis bull from "Risdon" Warwick at the first Santa Gertrudis sale and began crossbreeding with Herefords.

1956 William John McGuigan (John) joined the partnership and saw the benefits of the crossbred Santa Gertrudis/Hereford provided for his Uncles Tom and Geoff Pownall.

1967 John & Merriel purchased 2 Santa Gertrudis bulls from Eidsvold Station, 9 used Gylanda bulls from Geoff Pownall. At this time, there were a limited number of purebred bulls available due to the grading up time frame, demand, and the imports' closing. Three Brahman bulls were also obtained to go over the remaining purebred Herefords to speed up the adaptability process.

1963 John's brother Bruce travelled to New Zealand, where he met his future wife, Jan Thompson.

1970 Bruce learnt the art of pregnancy testing from his brother-in-law, who was a vet. Pregnancy Testing was introduced into the "Kooyong" herd and continues today at Cree, 51 years later.

1992 Shaun & Jo joined the partnership and began the grading-up program selecting the best quality cows from 1000 commercial "Kooyong" females founding the "Cree" stud herd.

1999 Shaun introduced Electronic herd recording, and the entire herd was recorded on Stockbook (Practical Systems). *Mothering up and assigning sires began.

2000 Cree Stud was registered with the classification of the first 3X females. Cree joined Group Breedplan, measuring the herds, growth, fertility and carcass traits.

2012 Introduced Farm Biosecurity.

2020 To date, EBVs generated since 1999, currently a 4 1/2 star for completeness of recording.

2021 Tissue samples collected from Sale Bulls and Sires for Geonomics and testing for Pompes and Pesti Virus.

Cree bulls are from a herd that is accurately recorded and publicised.

SPONSORS

Agent Rebate

A 2% rebate is offered to outside agents introducing approved buyers in writing 48 hours prior to the sale.

**Conditions apply*

Please send introductions for approval to Shaun & Jo via e-mail at creasantas@bigpond.com

Supplementary Sheets

Supplementary sheets will be available the week before sale, with actual weights, EMA/Fat scans, scrotal sizes and morphology results.

Health & Vaccine Management

- : 2 x 7 in1 as calves
- : 3 germ blood (weaning)
- : Botulism (3 year)
- : 2 x 3-day sickness as weaners.

Pre-Sale Booster

- : 2 x Pestiguard pre-sale and tested negative to Pesti Virus
- : 2 x Vibrio pre-sale
- : 3 Day

Crush side semen test and sample for morphology has been conducted by Ced Wise.

Morphology analysis done by Tim North, Rocky Repro.

An Australian Cattle Vets (AACV) certificate will be supplied with each purchase by Ced Wise.

EMA / Fat Scan

All bulls were scanned by David Reid at 600 days and submitted to BREEDPLAN for recording.

All lots will be scanned again prior to sale and actual sale weight/scan/scrotal measurement will be provided on supplementary sheets available the week before the sale.

Daily gains will be calculated from the stockbook software.

DNA

Genomically enhanced EBV's. All sale bulls have been tested for Horn/Poll and DNA sire verification, tested negative to BVDV (Pesti virus) and Pompes E7 Free.

Refreshments

Morning/afternoon tea and lunch will be available on sale day.

Ring Side coffee stall proceeds will be donated to Biloela Carols by Candlelight.

Canteen/Pub proceeds will be donated to Capricorn Rescue Helicopter.

Inspections/Inquiries

We are always available for you to inspect the sale draft prior to Tuesday, 30th August 2022 and can be contacted by phone or email for any inquiries.

Delivery

Delivery will be available from 'Kiah' on sale day. After the sale, free delivery can be arranged to the following destinations: Emerald, Goomeri, Roma, Clermont, Charters Towers, Rockhampton, and all points in between.

All care taken but no responsibility held. We recommend insurance, representatives will be present at the sale.

After Sale Service

Our service goes beyond sale day. We do everything possible to make sure our bulls are fit and healthy.

We are interested in what you are wanting to achieve in your breeding program. Please keep in touch.

Injury to Person or Property

All persons who attend the sale do at their own risk and the vendors assume no liability or responsibility, legal or otherwise, for any accident or injury which may occur.

In accordance with OH&S protocol, visitors are asked to observe and adhere to all signage.

Disclaimer

Every care has been taken in compiling this catalogue to ensure accuracy of information supplied, but no responsibility is accepted for any errors which may have occurred.

RELIABILITY

SUSTAINABILITY

LONGEVITY

YOUR PROFITABILITY

TEMPERAMENT

Cree consists of 1000 head with 400 Stud females grazing at "Kiah", "Blue Haven" and "Westrock" in the Lawgi Dawes area near Thangool. Family owned and managed by Shaun & Jo McGuigan with assistance from their two sons Jake & Jed.

Jake, wife Kathleen, and granddaughter Malia, live at "The Meadows" near Jambin, overseeing and share farming the irrigation, hay growing, and fattening country.

Jed, a qualified Commercial Heavy Vehicle Mechanic & Auto Electrician, lives with his partner Tayla and her son Jarel at "Four Winds", additional alluvial black soil fattening/farming block at Jambin where Jed also owns and operates McGuigan & Co, a local

transport business for Livestock, Hay & General Freight.

We take pride in the management process which shows in our 4 1/2, out of 5 star rating, for performance recording with BREEDPLAN. We have been objectively recording for over 20 years.

All information is recorded via live entry at the cattle yards on Stock book software to promote accuracy and efficiency to eliminate any errors due

to double handling. This is particularly important with the collection of TSU samples for DNA and Genomics applications.

The stud is managed with a commercially orientated focus, breeding cattle that are functional and sound, that can rear a calf with good weaner weights, re-breed each year, and do this regardless of season and environment.

MANAGEMENT | JANUARY & FEBRUARY

400-Day Weights are completed, Scrotal Circumference and Flight Time information is collected for the whole cohort of Yearling Bulls and sent to ABRI for analyses.

We make selection of potential sale bulls and draft off to then have TSU samples taken and sent away for DNA analysis, (BVDV) Pesti Virus, Pompes, Horn/ Poll, Parentage and 50 K SNP for Genomics. These carefully selected bulls are then returned to grass and Leucaena pastures at "Kiah".

The undesirables are castrated and trucked to "The Meadows" to fatten on leucaena and grass.

The second and final round of calf branding and 2nd Vaccinations are administered with a NLIS tag.

February is the end of the Cree Mating season, so all Sires are taken out from all females and spelled in grass pastures, until their annual Semen Morphology test in the following June.

The life of a Stud Bull/Cow at Cree

MANAGEMENT | NOVEMBER & DECEMBER

Cree's management process begins in November with seasonal joining allowing us to put pressure on our females.

The Cree Sires are joined to aged cows on 1st November to end February, allowing all females to be finished calving by 10th December each year.

In late December yearling heifers are multiple joined for 70 days from Christmas to the end of February. They range from 12-15 months at joining and this practice identifies

the early pubertal genetics. We have done the exercise of ovarian scanning prior to joining in the past but, found the presence of a Corpus Luteum in all except one heifer. With that information it was decided to let nature do the selecting. Season permitting, we also run a blanket AI program in Early December.

The heifers that are multiple joined calve out in September and October. The calves are recorded the day they are born and weighed, ear tagged, and a TSU is taken to be sent away for Sire

DNA verification. These Dams are now in line with the rest of the breeding herd. The following year they are presented for classification if positively rebred with a weaner at foot.

This system proves to us early puberty with an ease of calving, milking, mothering ability and most importantly eliminates the likelihood of covert genetic occurrences such as lactation anoestrus. All calves are recorded at birth and a round of branding, tagging and vaccination is completed before Christmas.

MANAGEMENT | APRIL & MAY

Weaning is conducted in either April or May depending on the season and available feed. All breeding females are weighed (Mature Cow Weight) with the calf at foot also weighed (200-Day Weight) on the same day then weaned. Cows will also be pregnancy tested and any positives are bang tailed, with any failures, ring tailed and trucked to "The Meadows" for fattening.

Yearling heifers are weighed for 600-Day Weights, pregnancy tested and scanned for the Carcass traits being EMA, Rib, Rump and IMF. Again, any empties are trucked to fatten at "The Meadows". Managing disease is a

priority, therefore seasonal joining and vaccinating for 7:1, Pesti Virus and Vibrio is a must. A yearly booster of 7:1 and Pesti is also administered at pregnancy testing to all breeding females.

One paddock is mustered each day during weaning time. As each paddock is yarded, we feed the weaners out from the day before in laneways and small holding paddocks while the new mob is processed through the yards. Then we yard them and muster another paddock to test and weigh. This saves costs on feeding weaners in the yards and provides handling and training. The calves from the first paddock weaned have been let out

and yarded 7 or 8 times by the end of the weaning process and most of the handling has been completed.

At the completion of weaning all calves are drenched, with potential breeding heifers vaccinated for vibrio and pesti virus and turned out to grow on grass pastures.

During April/May all the potential sale Bulls are drafted and identified as Auction sale bulls and drafted into smaller mobs and moved into closer grass and leucaena paddocks for sale preparation. 600-Day Weight and scans for the Carcass traits being EMA, Rib, Rump, and IMF are measured by David Reid (Accredited scanner).

Paul Williams scanning heifer 600-Day

Breeders being mustered with weaners

David Reid scanning bulls 600-Day

CREE MANAGEMENT *and* OPERATIONS

MANAGEMENT | JUNE

With three months to go until Cree Bull Sale, all eligible bulls are presented for classification. The Paddock bulls graze on leucaena and grass and are also now available for sale anytime.

The sale team which includes private sale bulls, and the Cree Sires are Semen tested (% Norm Sperm)

Rocky Repro employs an Australian Accredited Cattle Vet to come on property to examine all bulls internally,

measuring scrotal circumference and then takes a crush side semen sample and measures motility.

A semen sample is taken back to the laboratory for a Morphology test to count % normal sperm and to identify any defects. An AACV certificate is then processed on each bull and is sent with all Cree bulls to the successful purchaser when delivered after sale. The bulls are also vaccinated on this day with a yearly booster for 3 Day, Vibrio and Pesti virus.

MANAGEMENT | JULY / AUGUST

Focus: SALE BULLS

We believe the leucaena environment that the bulls are raised in prepares the bulls for the harsher environment they will encounter after sale. Like brigalow and mulga type country the leucaena has a harsh stick base which tests the animal's soundness with regards to eyes, sheathes, testicles and feet.

The bulls are supplementary fed on a high roughage diet consisting of hay we grow ourselves, usually wheat, oats, barley, and millet. To this we add probiotics and all essential trace elements for a healthy rumen. Our preparations are never more than 30% grain composition and are fed daily.

The benefits of this are two-fold. One, bulls still must forage in their paddocks, and because of the high

roughage and low grain in the diet their rumen maintains healthy bacteria able to turn grass into energy. This practice negates any let down period after purchase, and ensures their future soundness, both physically and reproductively. Secondly it allows us to control growth rates and present bulls in what we believe to be optimum working condition at around 1kg per day life gain.

Our goal at Cree is to provide future sires to stud and commercial operations that have the ability to provide positive genetic gain across the range of profit driving traits simultaneously.

All bulls are sold with Quality Assurance, AACV certificate with the full breakdown of Morphology results and a health declaration.

We offer after sale service, and delivery is arranged. Sale Day Weights/Carcass traits: EMA, Rump, Rib, and IMF scans are completed by David Reid.

Cree offers a sale catalogue online and a paper copy with transparent information on each animal.

A supplementary sheet, with Raw Data: Birth date, Fat scan: EMA, Rib, Rump, IMF, scrotal size and % Norm Sperm is available 1 week prior to sale. These bulls are offered for sale at the end of August on property at "Kiah" Thangool.

We hope this gives you an insight into the management at Cree and we look forward to seeing you at our 8th on property sale.

"Always the last Tuesday in August"

AuctionsPlus

How to Register and Bid on AuctionsPlus

- 1 Go to www.auctionsplus.com.au to register at least 48 hours before the sale.
- 2 Select "Sign Up" in the top right hand corner.
- 3 Fill out your name, mobile number, email address and create a password.
- 4 Go to your emails and confirm the account.
- 5 Return to AuctionsPlus and log in.
- 6 Select "Dashboard" and then select "Request Approval to Buy".
- 7 Fill in buyer details and once completed go back to Dashboard.
- 8 Complete buyer induction module (approx. 30 minutes).
- 9 AuctionsPlus will email you to let you know that your account has been approved.
- 10 Log in on sale day and connect to auction.
- 11 Bid using the two-step process – unlock the bid button and bid at that price.
- 12 If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

Email: info@auctionsplus.com.au

Here at Cree Pastoral, we utilize the benefits of BREEDPLAN to identify and multiply the occurrence of high-performance animals.

Many of these traits are impossible to identify by "eye" and are hard to measure. Often these important profit driving traits are negatively correlated to the popular selection criteria utilized by purchasers using raw data. It is important to understand that raw data is only the objective measurement of that animal and cannot be compared to animals even run in the same mob unless they are of the same age and have had the same opportunity whole of life.

BREEDPLAN on the other hand takes that raw data and adjusts for age and the heritability of each trait, allowing for accurate comparisons between animals of different ages and preparations. EBV's denote the genetic potential irrespective of environment.

BREEDPLAN is the only "quantifiable" way to measure genetic progress. With the necessary obligations of acquiring 200-, 400- and 600-Day weights along with measuring EMA's, Rib and Rump

fat depths, IMF scans, scrotal sizes and recording days to calving EBV's and flight time, BREEDPLAN allows us to keep our finger on the pulse of our herds performance.

The collection of this data is objective, real performance and cannot be denied "in herd". We believe this to be the most effective way of monitoring our herd's performance and direction. The BREEDPLAN analysis is then the platform to measure our herd in comparison to the Santa Gertrudis breed.

With careful selection and complimentary joinings, we are creating animals that have across the board positive contributions to the major profit driving traits, namely growth, fertility, and carcass. Our end goal is producing animals that are above breed average across all their recorded traits and currently the Cree herd has a 4 1/2 from 5-star rating for completeness of performance recording which places us in the top 3 recorded Santa Gertrudis herds in Australia.

The EBV's contained within this catalogue can be validly compared with other Santa Gertrudis GROUP BREEDPLAN EBV's. These EBV's can not be used to compare animals of another breed.

Estimated Breeding Values (EBV's)

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These are called Estimated Breeding Values (EBV's).

The EBV is therefore the best estimate of an animal's genetic merit for that trait. EBV's are expressed as the difference between an individual animal's genetics and the genetic base to which the animal is compared.

BIRTH

Gestation Length: The GL EBV (days) is based on AI records. Lower (negative) GL EBV's indicate shorter gestation length and generally easier calving.

Birth Weight: The Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth occurring. This is particularly important when selecting sires for use over heifers.

FERTILITY

Scrotal Size: The SS EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Scrotal circumference measurements are taken between 300 and 700 days and adjusted to 400 days of age. Higher (positive) EBV's indicate higher fertility. SS is also positively associated with female fertility.

Day to Calving: The DTC EBV (days) is an indicator of female fertility based on the time between a cows first exposure to a bull and when she subsequently calved. Cows that calve late in the season or fail to calve are penalised. Lower (negative) EBV's are preferred indicating shorter days to calving for the sires daughters.

GROWTH

Milk: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.

200 Day Growth: The 200-Day EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400 Day Weight: The 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600 Day Weight: The 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight: The Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Lower or more moderate EBV's are generally more favourable.

CARCASS

Carcass Weight: The Carcass Weight EBV (kg) estimates the genetic difference in carcass weight at a standard age of 650 days.

Eye Muscle Area: The EMA EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBV's indicate better muscling.

Rib Fat: The Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBV's indicate more subcutaneous fat and earlier maturity.

Rump Fat: The Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBV's indicate more subcutaneous fat and earlier maturity.

Retail Beef Yield Percent: The RBV% EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcass. A more positive EBV indicates higher percentage yield for the 300kg carcass size.

Intramuscular Fat Percent: The IMF% EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300kg carcass. Depending on market targets, larger more positive values are generally more favourable.

ACCURACY

An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy, the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

Acc. Range Interpretation

- < 50% The EBV's are preliminary. EBV's in this range will have been calculated based on very little information. These EBV's could change substantially as more direct performance information becomes available on the animal.
- 50 - 74% The EBV's are of medium accuracy. EBV's in this range will usually have been calculated based on the animal's own performance and some limited pedigree information.
- 75 - 90% The EBV's are of medium-high accuracy. EBV's in this range will usually have been calculated based on the animal's own performance coupled with the performance for a small number of the animal's progeny.
- 90% > The EBV's are a high accuracy estimate of the animal's true breeding value. It is unlikely that EBV's will change considerably with addition of more progeny data.

We'll safeguard your future.

CUSTOM SEMEN COLLECTION - EXPORT & DOMESTIC
 PROVIDING ALL YOUR BOVINE REPRODUCTION NEEDS

07 4934 1964 info@rockyrepro.com.au www.rockyrepro.com.au

Although the accuracy of an EBV should be considered, animals should be compared on EBV's regardless of accuracy. Where two animals have the same EBV however, the animal with the higher accuracy would normally be used more heavily than the bull with the lower accuracy because the results can be predicted with more confidence.

SELECTION INDICES

The Selection Index value for an animal is effectively an EBV of the animal's profitability for a defined commercial production system and market end-point. Ranking bulls on their Selection Index value sorts them based on their progeny's expected differences in profitability for the targeted production system.

As a guide to using Selection Indexes, it is recommended that producers complete the following steps:

- (i) Identify the Selection Index of most relevance to your production system
- (ii) Rank animals on the Selection Index
- (iii) Consider the individual EBV's of importance
- (iv) Consider other traits of importance that may not be accounted for in the selection index (eg. temperament, structural soundness)

There are currently two different selection indexes calculated for Santa Gertrudis association animals. Each Selection Index describes a specific production system and market scenario as described below:

Disclaimer

The Santa GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeder. Neither Santa Gertrudis Association nor the ABRI oversee or audit the collection of the data.

Domestic Production Index

Estimates the genetic differences between animals in net profitability per cow joined for an example self-replacing commercial herd (run in a temperate environment) producing steers for the domestic trade. This Index assumes that the steer progeny are pasture grown and finished and marketed at 500 kg live weight (280 kg HSCW and 12 mm P8 fat depth) at 16 months of age. Daughters are retained for breeding.

Export Production Index

Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd (run in a sub-tropical environment) producing steers for the export trade. This Index assumes that the steer progeny are pasture grown and finished and are marketed at 620 kg live weight (340 kg HSCW and 15 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

All selection indexes are reported as an EBV, in units of relative earning capacity (\$) for a given production/market scenario. They reflect both the short term profit generated by a sire through the sale of his progeny, and the longer term profit generated by retaining their daughters.

The "Completeness of Performance" herd rating system assesses the quantity of pedigree and performance information that has been submitted to BREEDPLAN by an individual seed stock herd.

The 1 to 5 - star rating scale is calculated based on the proportion of calves and numbers of performance traits recorded.

The Cree herd consistently records a Completeness of Performance rating of 4 ½ stars since 2016.

BREEDPLAN data for Sires compiled from June 22 BREEDPLAN run / BREEDPLAN data for sale bulls compiled from July 22nd BREEDPLAN run.

ROSEVALE KING K88

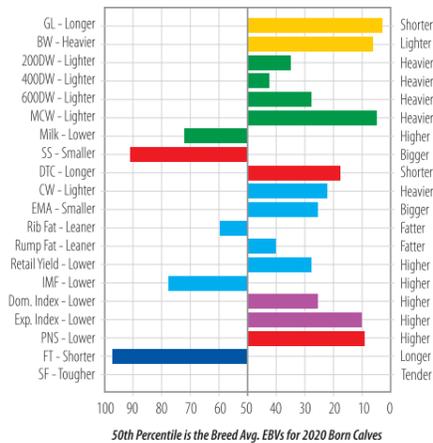

King K88 was purchased for the second top Australian price and equal Australian horned bull record (at the time) of \$70,000 at the 2015 Rosevale sale. His unique mix of Phenotype and Genotype, temperament and soundness made him impossible to pass up.

Breed character, coat type, weight for age, perfect sheath and testicles all backed up by impressive performance data. He is now a trait leader for 200 - 400 and 600-day weight, scrotal size, and Carcase Weight, which is an impressive balance of the profit driving traits. Bulls like King present a tremendous opportunity to make rapid genetic change over multiple traits at once. We lost King to what we believe was lightning in Feb 2020 so this will be the last offering of his natural sons. He has had a major influence on our herd with 39 performing daughters along with 3 retained sons in Northerly, Normandy, and Nemesis.

To date King has sold 71 sons through both auction and private sales to average \$11,200 and last year 12 sons averaged \$19,800. The most notable sales have been \$31,000 for King R092 to Surbiton Station, Alpha, \$26,000 for Nogoia N108 (P) and King R316 (P) selling to David Atkinson, Marlborough, and David and Wendy Anderson, Westmar, respectively, King R248 for \$25,000 also to Surbiton Station and Napoleon N002 (P) and King R150 that both sold for \$24,000 to Landsborough Stud, Winton and Rod and Megan Dingle, Mundubbera respectively.

King is represented by lots: 2, 3, 8, 11, 12, 19, 24, 26 & 36.

BENELKAY HERCULES H030 (P)

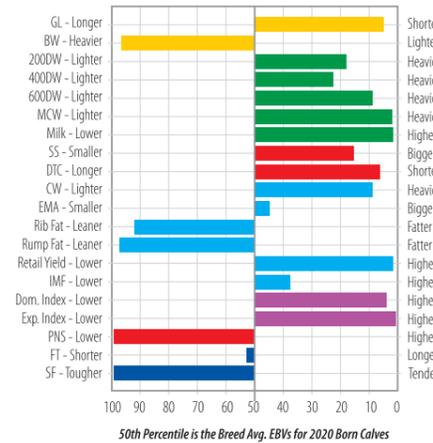

Hercules was purchased for the second top price at the Benelkay Sale in 2014. We were attracted to his dark slick coat and sire appeal combined with balanced performance and polledness. A bonus has been the ability to produce small calves. We have used and recommended Hercules bulls as suitable for yearling joining's with a high degree of success over the last few years. His calves are above average growth by weaning and combine with high carcass and fertility performance as depicted by his graph.

His sons have sold to a top of \$36,000 for Hercules R022 (P) selling to Rosevale Cattle Co.

These will be the last Hercules sons to be offered for sale. Hercules is represented by lots: 5, 27, 51, 69 & 71.

CREE FERRERO F140 (ET) (AI) (P)

Ferrero F140 (ET) (AI) (P) was retained out of an IVF program. He is by Diamond S Top Gun 244 (P) (USA) which provides out cross genetics to Australian bloodlines. He was used in our heifers and 2 x cows for the first few seasons until his calves began to shine through. This, along with his perfect sheath, early reproductive traits, performance, and temperament saw him elevated to stud duties. Ferrero is currently a trait leader for 600-Day weight Days to calving, Carcase Weight and RBV.

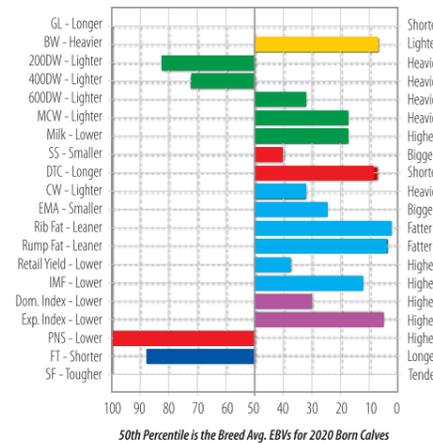

"Ferrero combines the contradictory traits of high milk, high growth and high female fertility in one genetic package. Common thought is that cows cannot be heavy and super fertile, or they cannot be heavy milkers and be super fertile. When bulls such as Ferrero come along, they give us a tool to make genetic change quickly over a range of traits at once."

David Greenup. Rosevale Santa Gertrudis

Like King this will be Ferrero's last natural progeny to be sold. He has sired over 260 calves and produced 78 performing daughters, left us a son in Monte Carlo and was also the sire of the Dams of Mexico, Moritz, Morocco, Nemesis and Papalii. To date 70 sons have sold through both auction and private treaty to average \$8050, topping at \$26,500 for Cree Ferrero M014 (P) selling to Landsborough Santa Gertrudis Stud Winton. Other notable sales were Ferrero M148 to Surbiton Station, Ferrero N092 to Burleigh Estates and Ferrero R644 to Waterford Grazing all for \$18,000.

Ferrero is represented by lots: 32, 34, 39, 42 & 77.

CREE MOROCCO M126 (P)

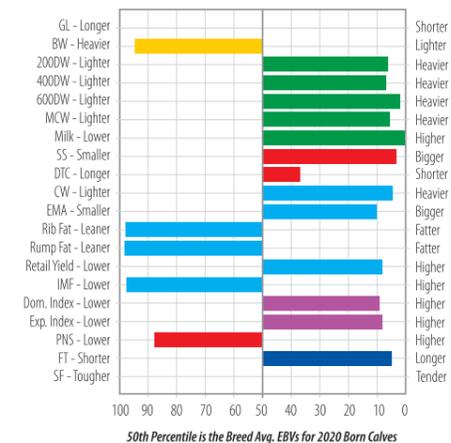

Morocco has an excellent balance of performance, combined with polledness and breed character. A feature of his performance predictions is the contradictory high milk and high female fertility, a trait passed down from his maternal Grand Sire in Ferrero, and being strong across the board for carcass traits, particularly IMF. He is also a trait leader for Days to Calving. We used him for 3 seasons before selling him on to Chris and Gail Davey at Bundaberg.

Again, smaller calves but well above average by 600-days. Morocco calves are early maturing and often the first ready for sale which is also indicated by his carcass traits.

These will be the last offering of Morocco sons for sale. Morocco is represented by lots: 37, 38, 41 & 59.

CREE NORTHERLY N116 (P)

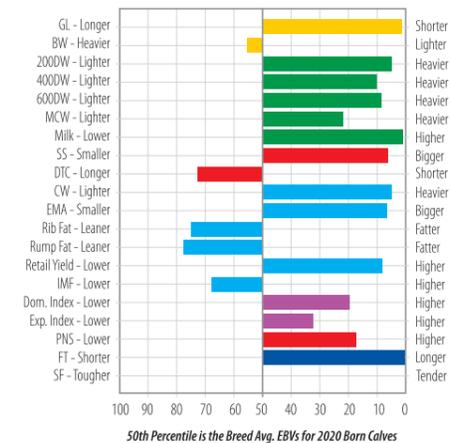

Northerly is a polled son of King out of an aged cow that has reared 9 calves. Selected primarily for his outstanding phenotype and temperament he established himself as a prominent sire with his first drop of calves.

He is a long bodied deep and heavy bull with an ideal sheath, large testicles, and except for fats has breed leading growth and carcass data. Again, high growth, with high milk, heavy muscle and while not as high as some of our sires, still above average for female fertility traits.

This has resulted in him being a trait leader for 200-400-600-Day Growth, Scrotal size, and Carcase Weight. Last year his first 11 sons sold to average \$17,500 and equal the Cree stud record of \$40,000 for Northerly R222 (PP), selling to Pat and Stuart Leahy, Monto.

Northerly is represented by lots: 1, 29, 46, 49 & 50.

CREE PONGA P006 (AI) (PS)

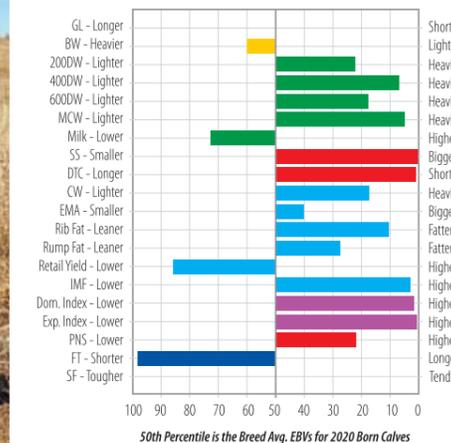

Ponga is an A.I product by Cree Leroy L192(P). We retained semen in Leroy when he sold to the Dillon Family, Surbiton Station, Alpha for \$40,000 at the 2016 sale. Combined with a Benelkay Hercules cow the resulting progeny in Ponga epitomises everything we are trying to achieve.

While not the highest performer we have in any 1 trait, it is his completeness that presents the opportunity to make genetic gain everywhere at once. Short gestation, average Birth Weight, high Growth, early Puberty, high EMA, Carcase, RBV and quiet, all in the 1 package. He is currently a trait leader for 200-Day, 600-Day and Scrotal size.

Because of his gestation and birth attributes Ponga has been used exclusively over yearlings to date.

Represented by Lots: 6, 7, 16, 20, 21, 22, 30, 40 & 58.

CREE NORMANDY N036 (P)

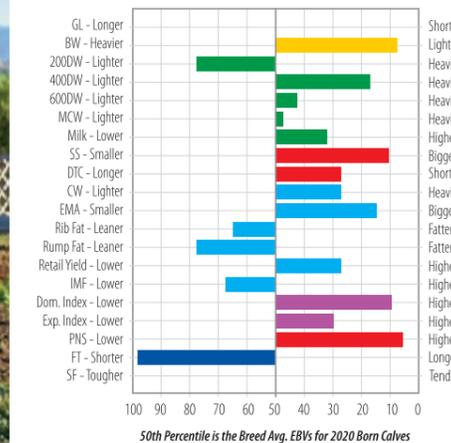

Normandy is also a polled son of King from a female that raised 7 calves. He is more of an efficient type in frame but maintains thickness and muscle with an excellent sheath, large stones and quiet temperament. He also impressed us with his first offering.

He is a trait leader for 400- Day Weight, Scrotal size and Days to Calving. He offers potential for dynamic change in female fertility without compromising growth and carcass.

Last year 9 of his first sons averaged \$15,500 topping at \$22,000 twice, for Normandy R108 (P) and Normandy R276 (P), selling to the Strathmore Stud, Blackall, and Mark Wilson, Banana Station respectively.

Represented by lots: 4, 17, 31, 35, 42, 52, 53, 61 & 62.

ROSEVALE NACHO N382 (P)

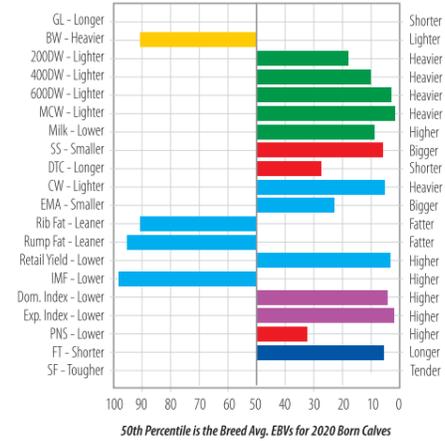

Nacho is a more efficient style of bull from a fertile Rosevale line, in that both Grand Dams have had 10 or more calves. He has interesting performance data with very low birth weights, then expresses high early growth to 400-Day with lighter Mat Cow weights, early Puberty, good Days To Calving and High EMA.

He has bred a consistent line of cattle and appears a very useful addition to our sire battery. Last year 6 of his first sons sold to average \$13,200 topping at \$20,000 for Nacho R018 (P) that sold to the Strathmore Stud, Blackall.

Represented by lots: 23, 25, 28, 48, 68, 72 & 74.

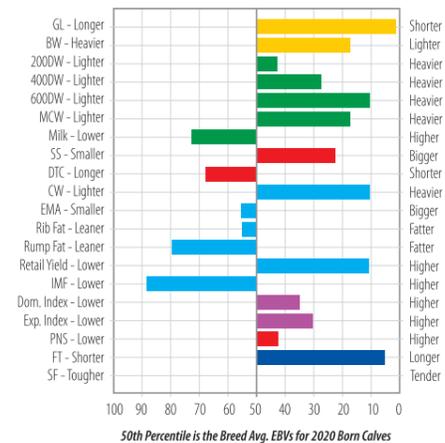

CREE NEMESIS N240 (P)

Another polled son of King and this time from a Ferrero cow. As you would expect from combining 2 of the breeds leading performance sires his predictions are powerful. A trait leader for 400 and 600-Day Growth, Scrotal Size and Carcase Weight. Again, a sire capable of pushing Growth and Fertility simultaneously. Nemesis sons have sold to a top of \$28,000 for Nemesis R050 (P) who sold to the Gylanda Stud.

Represented by Lots: 15, 33, 44, 57 & 65.

CREE PAPALII P002 (ET) (AI) (P) (PS)

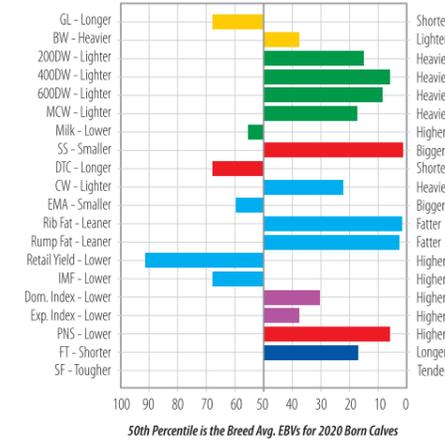

Papalii is a product of one of our IVF programs by Warena D696 (P), once again from a Ferrero cow. He is a big thick dark coated poll bull with a ton of breed character.

He has desirable Growth predictions with small calves, then attaining high Growth through 600-Day before dropping back to Mature Cow, with early Puberty, high Carcase Weight and RBV.

While his performance is not as consistent across the traits as some of our other sires, he brings an outside sire line, structural soundness, and faultless temperament, so used in the right circumstance we feel he has plenty to offer.

Represented by lots: 45, 47, 54, 55, 63, 64 & 70.

ROSEVALE JACKAROO P316 (P)

Jackaroo was purchased at the 2018 Rosevale sale for use as a yearling heifer bull and has been used exclusively for that. He is a very eye appealing bull as most Jackaroo's are, and has an ideal Growth pattern with smaller Birth Weight then rapid Growth through to 600-Day, tapering off at Mature Cow.

Early Puberty is a feature as are the high Fats which is Jackaroo's trademark.

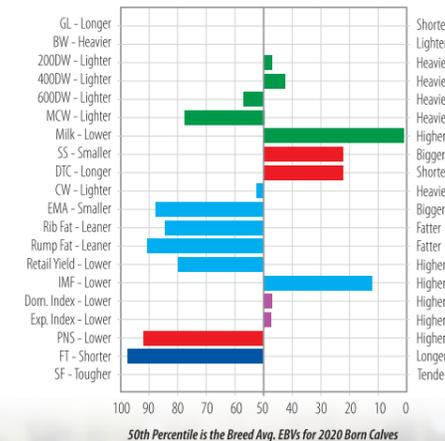

Represented by lots: 9, 10, 13, 14 & 73.

GREENUP MANUKA M356 (P)

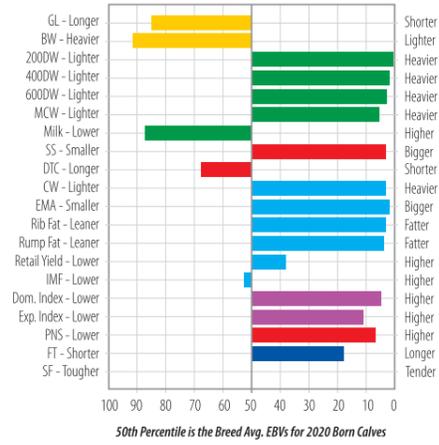

Manuka was only used lightly in the stud and was also used for yearling joining. His predictions indicate average growth with lower Mat Cow weights, possibly due to high Milking. Early Puberty, strong female Fertility and positive IMF are features.

He was used to cover King's cows for the remainder of the season when we found King dead and the lift in his calves from the influence of our better cows was evident in this drop. Last year 4 sons sold to average \$13,250 topping at \$18,000 for Manuka R034 (P) to Kyntryre Grazing, Monto.

Represented by lots: 56, 60, 66 & 67.

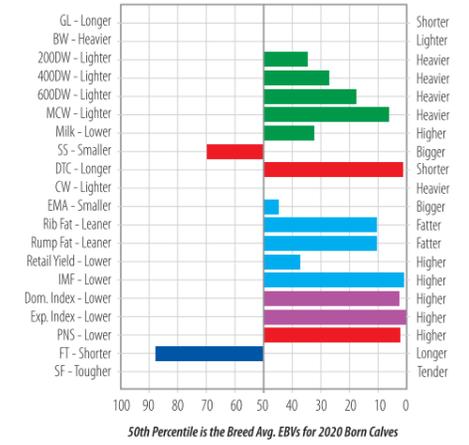

ROSEVALE QUICKSILVER Q256 (AI)(P)

Quicksilver was purchased at the 2020 Rosevale sale for the top price of \$50,000. Again by Jackaroo he has a ton of sire appeal and performance that is hard to fault. Growth, Puberty, Carcase, EMA and Fats; a bull capable of making rapid genetic change across multiple traits at once.

His first drop of calves are very promising and we look forward to seeing how they develop for next year.

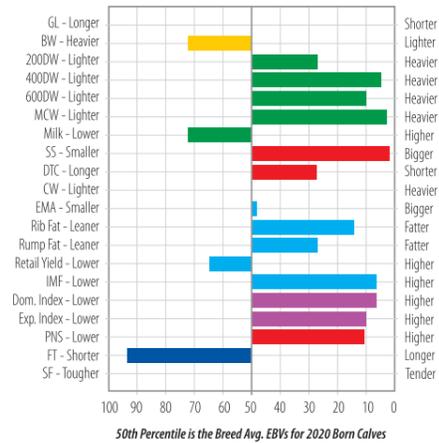

ROSEVALE REVELATION R410 (PS)

Revelation was purchased at the Rosevale sale last year, and like the 2 bulls before him, he has the same ability to affect rapid change simultaneously.

Not quite the same Growth, but features Days to Calving and Fats, particularly IMF.

GYRANDA QUICKDRAW Q492 (PP)

Quickdraw was purchased at the 2020 Gyranda sale for the same reasons. Growth, Fertility and Fats, particularly IMF in a dark coated homozygous package that also offers outcross genetics. Again, a bull capable of making genetic advances across multiple traits simultaneously.

His first drop of calves also looks promising at this stage.

YARRAWONGA R300

R300 was purchased at last years Yarrowonga sale.

He offers outcross genetics in a dark smooth coated homozygous package.

CREE M105(P)
 CREE G133

Dam Notes: Age 1st Calf: 2
 Calving Int: 364 days No. Calves: 5

Dams progeny include 1 prior sale bull that sold to Arm & Dagger for \$14000. Her last is a heifer by Northerly & she is PTIC again. Generational fertility here as Grand Dam Cree G133 had 9 calves with a 368 day interval & include Lot 66 this sale. G-Grand Dam A081 had 7 in 364 days. Northerly S104 (PP) is what we would expect from the King & Ferrero cross displaying high growth with high milking ability trending to a lighter mature cow weight. His EMA & RBY are top 5% & above average Fertility predictions push his \$Export Index to the top 15%. His mother failed to classify, which excludes him. We prioritise high performing, fertile, proven genetics, over subjective classification decisions and felt he was a worthy Lot 1 bull.

Dam Cree J077 (P) has produced 6 bulls in a row, 5 of which have sold to average \$13000 topping at \$20000 for King R112 (P) that sold to Arm & Dagger at last years sale. Grand Dam Cree F083 (P) is one of the studs leading old cows having had 11 calves with a 364 day interval. (See Lot 56 this sale.) This full brother in King S204 (P) has always been a standout prospect from his weaning weight of 385kg until his 600-Day weighing. At 599 days of age he weighed 684kgs off grass and leucaena which equates to a life gain of 1.08kg per day. He presents an outstanding opportunity to push the boundaries across all the profit driving traits at the same time. Growth, Fertility, and EMA combining to produce the highest \$Export Indexing bull in the sale.

CREE JUANITA J217 (IVF) (P)
CREE Y371

Dam Notes: Age 1st Calf: 2
Calving Int: 356 days No. Calves: 8

Juanita J217(P) is another of our best producing females. Her progeny include Leroy L192(P) that sold to Surbiton Staion for the equal Cree stud record of \$40000, Pancho P144(P) that sold to Strathmore stud for \$15000 and King Q198, that sold to Donald Joyce for \$9000. A full brother King R092 sold at last years sale for \$31000 again to Surbiton Station and another full brother in King S110 is offered here. She is also Dam of Lot 77 this sale, an IVF calf by Ferrero, while her last is a bull by Northerly and she is PTIC again.
King S110 displays the high Growth and fertility traits you would expect from King across this female line.

FeedMaster DISC MILL

*Built in Australia
 for Australian Farmers*

RESULTS SPEAK FOR THEMSELVES!
 A recent installation to replace the old roller mill brings immediate results, able to reduce feed rate as well as a lift in production of 1.5lts per cow per day

- Unique processing action releases more protein from each grain.
- Process all size grains including pinched grains. Blending multi grains.
- Granulation size to suit all livestock - Dairy / Beef / Pigs / Sheep / Poultry.
- Simple operation. Manual or fully automated. All at the turn of a dial.
- Smooth quiet operation with low power consumption.
- Extremely low maintenance. Lowest cost consumables of all mills.
- Unique design - No close moving parts eliminates costly accidents.

Dam Notes: Age 1st Calf: 2
 Calving Int: 396 days No. Calves: 2

Dams progeny include 1 retained heifer that is PTIC and Papalii S048 (PP) that is offered here. Grand Dam Cree J135 produced 6 calves that consisted of three sale bulls, selling to IPB Agriculture, Geoff and Meg Becker and Calliope Station. 1 heifer was retained and another sold to Lisle Holdings for breeding. Papalii S048 (PP) demonstrates high Growth, attaining top 10% by 400 and 600-Days, early puberty and breed average DTC.

Dam Notes: Age 1st Calf: 2.5
 Calving Int: 444 days No. Calves: 5

Dams progeny include a private sale bull purchased by Mark Hetherington and 1 retained heifer. Grand Dam B091 epitomises functionality as a beef breeding cow. She raised 14 calves with a 362 day calving interval including sale bulls to Enniskillen Pastoral and Calliope Station. She went to the abattoir at 16 years of age, dressed 262 kgs with 6mm of fat and returned \$1800. Manuka S080 (PS) is another bull that should suit heifer joinings both on pedigree and phenotypically. His lower Growth is supported by high Milk, high DTC and high IMF to attain breed average \$ Indexes.

LOT 75

Bovine Morphology is the study of the shape and form of bovine sperm. The quality of a bull's sperm depends on many factors, including stress, temperature, nutrition, illness/injury, age and testicular form and function.

Standard crush-side assessment of semen uses a field microscope that magnifies sperm 400x. Crush-side review only looks at semen motility and gives a single percentage of sperm moving forward.

Motility does not always represent the actual fertilizing ability of the semen. In addition, many abnormalities directly affect the quality of sperm and cannot be seen in this resolution.

To get a more comprehensive overview, a high-powered oil-immersion microscope is required. At Rocky Repro, we use DIC (differential

interference contrast) microscopes in our laboratory to magnify the image by 1000x.

Morphology provides a deeper understanding of your bull's actual reproductive ability and provides insight into their overall health and condition. It also shows the overall health of the seminal fluid, detecting the presence of other unfavourable conditions such as bacteria, yeast, parasites, urine crystals, and white and red blood cells.

Beyond just motility, morphology looks at individual sperm cells, examining head shape and smoothness, tail shape and integrity and additional abnormalities.

Sperm abnormalities fall broadly into two categories: Compensable and Non-Compensable.

Compensable abnormalities are abnormal sperm that are unlikely to reach or fertilize an egg; hence they can be present in slightly higher levels than non-compensable sperm.

Non-Compensable sperm has the potential to reach and fertilize an egg but will likely result in early embryonic death and loss of pregnancy.

Overall, any semen sample with less than 70% normal morphology, regardless of the category of abnormality, will not meet the industry standard for a "Tick" or "Pass" grade.

A morphology assessment provides a valuable real-time look at the bull's current reproductive and overall health and can also offer insight into the bull's breeding future.

FERTILITY

Does pregnancy testing increase fertility?

Pregnancy testing is a very good way to drive profitability in a herd but does very little to increase a herd's fertility. The yearly culling of cows that fail to re-breed, only to have them replaced by heifers from the same herd, often daughters from these very same cows, cannot raise fertility.

The foundation cows of the Cree herd have been pregnancy tested since 1967 and we are still prioritizing fertility. Some bulls you buy will have the ability to raise fertility and some will not. The law of averages will prevail. Unless you know the reproductive capability of every bull you purchase, your chances of improving your herds fertility are compromised.

Buying bulls with higher than average Scrotal size and DTC (Days to Calving) EBV's is currently the only way to guarantee you are making fertility your priority.

We have been morphology testing our sires for over 20 years and this year's sale bulls have also been analyzed.

DAYS TO CALVING VERSUS CALVING INTERVAL

We are often asked what is the difference?

The calving interval is simply the number of days between a cows calving dates divided by the number of calves she has had. It is a useful indicator of a cows individual performance but is largely affected by management practices. Controlled joining periods, A.I programs, IVF egg donation and single sire bull failures all have a negative effect on the calving interval through no fault of the cow.

The Days to Calving EBV is derived from recording when the cow is exposed to the bull until she has the subsequent calf.

This means it is actually a measurement of her speed of re-breed, how soon she returns to the bull after calving. The EBV takes into account the performance of her sire and dam and all of her siblings and effectively takes out the management issues. This is why a cow with a "relatively" poor calving interval can still have a reasonable EBV for Days to Calving. It also means cows with a good DTC EBV are less likely to produce heifers who will suffer from lactation anoestrus. (won't cycle whilst milking).

This EBV denotes the genetic potential of the animal irrespective of management practices.

DAYS TO CALVING, GESTATION LENGTH AND CALF LETHARGY

Recently I read an article and was also questioned on the relationship of negative Days to Calving EBV's and short gestation, possibly causing calf lethargy.

The days to Calving EBV promotes cows that calve earlier in the season compared to those that calve later. Variation in Days to Calving is mainly due to differences in the time taken for females to conceive after the commencement of the joining period. It is actually a measurement of her speed of re-breed.

A short gestation period would somewhat aid the Days to Calving interval on an individual basis but given that EBV's are influenced by all progeny of the Sire and all progeny of the Dam they would all have to calve early to affect the EBV. Further to this, Scrotal size, (puberty) Lactation anoestrus interval and Gestation Length all contribute to the Days to Calving EBV.

Gestation Length on the other hand is simply the measure of pregnancy duration, and as it is impossible to know when most cows conceive, it is usually only generated from A.I records. Short Gestation is also actively sought in some breeds as one of the primary drivers to lower Birth Weights and aid calving ease. A short gestation interval is possible whether the cow calves early in the season or not and regardless of her Days to Calving EBV.

Calf Lethargy can be the result of many causes, like illness, temperature and disease, but it is arguable whether short gestation is one of them. In fact, a cow with longer gestation interval and larger calf would more likely suffer lethargy from a difficult birth.

Notes

Thank You

Thank you for taking an interest in the 8th Annual Cree Bull Sale catalogue.

If you have purchased a Cree bull from the sale, we wish you all the best and we will be in contact to organize delivery.

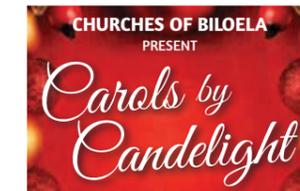

Also, to the under bidders and to those who attended the sale, we sincerely appreciate your attendance.

We wish you the very best in your business and hope the weather is kind.

A special thank you to Simone from Cattlelogue Queen and the catering team for donating to Capricorn Rescue Helicopters.

After sale please join us for light refreshments and drinks and also cutting of Jo's 50th Birthday cake!

Kind Regards,
Shaun & Jo McGuigan

LIVESTOCK AUCTION TERMS AND CONDITIONS OF SALE

CHAPTER ONE - PRELIMINARY

- (a) A vendor is bound by these terms and conditions by offering livestock for sale by auction.
(b) An agent (which includes an auctioneer) is bound by these terms and conditions by conducting an auction sale.
(c) A buyer is bound by these terms and conditions by bidding at auction.
(d) **Competition and Consumer Act (Cth) 2010**
It is unlawful for parties that are, or otherwise would be, in competition with each other to make, or give effect to, a contract, arrangement or understanding that contains a provision relating to:
 - price-fixing; or
 - restricting outputs in the production and supply chain; or
 - allocating customers, suppliers or territories; or
 - bid-rigging; or
 - collusive bidding.

Large fines and other sanctions may be imposed for unlawful conduct.

- (a) In these terms the expression auctioneer, agent, buyer and vendor respectively includes the servants, contractors and agents of each of them. The auctioneer, agent, buyer and vendor shall be wholly responsible for the acts and omissions of their respective servants, contractors and agents. The term "auctioneer" includes, so far as the law and context permits, the vendor's agent.
(b) When used in these terms the expressions "companion animals" means all animals originating from the same property on a particular day. Where lots are split and sent to multiple establishments, then all of these animals shall be regarded as companions.
(c) The following applies in interpreting these terms and conditions:
 - The following words have the following meanings:
Fees means all levies, charges, fees, costs and other expenses incurred or relating to these terms and conditions and the sale and purchase of livestock including, without limitation, transaction levies, yard and weigh dues, cartage, advertising and rebates, and whether paid for, or incurred, by the agent;
Livestock means animals auctioned pursuant to these terms and conditions; and
Price means the amount at which the lot has been sold to the buyer referred to in clause 7 of these terms and conditions
 - plus any Fees and other expenses incurred in relation to the purchase of livestock that are payable by the buyer; and
 - plus any GST added in accordance with Clause 12.
 - These terms and conditions are subject to legislation or regulation in the State in which the auction is conducted and in the event of any conflict then the legislation or regulation will prevail. The provisions of these terms and conditions are in addition to, and do not derogate from, the duties and rights of vendors, agents and buyers set out in legislation and regulation in the State in which the auction is conducted.

CHAPTER TWO - STANDARD TERMS OF SALE

- Subject to any reserve price, and to the right, prior to the fall of the hammer, of the vendor to withdraw any lot without declaring the reserve, the highest bidder shall be the buyer.
The auctioneer has the right to bid on behalf of the vendor provided that right is notified prior to the commencement of the sale and is subject to State law.
A bid cannot be made or accepted after the fall of the hammer unless, in accordance with clause 8, the auctioneer decides to put the lot up again.
Prior to the fall of the hammer the auctioneer shall announce the last bid and receive any further bids. The last price called by the auctioneer at the fall of the hammer shall be the amount at which the lot has been sold.
In the event of a disputed bid, the auctioneer is the sole arbitrator of the successful bidder or the auctioneer may decide to put the lot up again. The auctioneer's decision is final.
The auctioneer may refuse to accept any bid which, in the auctioneer's opinion, is not in the best interest of the vendor and need not give reasons for doing so.
A bidder shall be deemed to be a principal unless, prior to bidding, the bidder has given to the auctioneer a copy of written authority to bid for or on behalf of another person.
The successful bidder at a livestock auction sale must give to the auctioneer at the fall of the hammer:
 - the purchaser's name; or
 - the bid card number which identifies the purchaser; or
 - the name of the person on whose behalf the successful bid was made; and
 - the Property Identification Code (known as the "PIC") of destination.
- The auction shall be conducted on the basis that the bid price shall be exclusive of Goods and Services Tax (GST).
GST shall be added after the fall of the hammer for those sales subject to GST.
- The vendor warrants;
 - That the vendor has (or will have) the right to sell the livestock at the time of delivery; and
 - That the purchaser will obtain title on completion of the purchaser's obligations under this contract including payment.
- If a buyer does not comply with any of these terms and conditions, which includes the requirements of State law, any livestock knocked down to that buyer may be re-sold by public auction or private contract in whatever lots and manner the auctioneer decides. The re-sale may be with or without notice and shall be at the buyer's risk. The buyer is responsible for all loss and expense arising out of a re-sale and is not entitled to any resulting profit.
The buyer of livestock must pay the agent the full amount of the purchase price in immediate funds on receipt of a tax invoice. Payment is required prior to delivery unless some other time for payment is specified in an agreement between the buyer and the auctioneer that was made before the fall of the hammer. If, before delivery, payment has not been made then clauses 20 to 23 apply.
- No person may bid unless, prior to the commencement of the sale, that person has made arrangements satisfactory to the auctioneer for payment for livestock purchased. If bids in breach of this condition are inadvertently accepted, delivery shall not be given until the purchase money is paid and any law, rule or practice to the contrary is accordingly negated as far as possible.
- (a) Cattle sold on a liveweight basis that are weighed pre-sale are at the risk and expense of the buyer upon the fall of the hammer.
(b) Cattle sold on a liveweight basis that are weighed post-sale are at the risk and expense of the buyer immediately after weighing.
(c) All livestock other than cattle sold on a liveweight basis are at the risk and expense of the buyer upon the fall of the hammer.
- (a) Subject to this clause the sale is complete on the fall of the hammer.
(b) The time for rejection is the time commencing at the fall of the hammer and ending at the first of:
 - delivery is taken by a representative of the buyer;
 - departure of the animal from the purchaser's delivery pen; or
 - one hour after the last animal is:
 - in the case of pre-sale weighing, sold; or
 - in the case of post-sale weighing, weighed.
- (c) During the time for rejection the buyer may reject any animal which is lame, blind or diseased where that condition existed prior to the fall of the hammer but could not be reasonably observed when the animal was in the selling pen.
(d) If the purchaser rejects an animal during the time for rejection then the sale of that animal is cancelled and the animal is returned to the vendor or sold on such terms as any buyer and the agent may agree, after the agent has disclosed the reason for rejection to that buyer.
(e) This subclause applies only to cattle which are sold in Queensland at auction for slaughter. The agent has responsibility for the prevention of loss or escape (but not death, sickness or injury) of those cattle from the time of the fall of the hammer, for delivery to and from the scales, to the buyer's delivery pen and onto the buyer's nominated transport. This responsibility ends at the earlier of those cattle boarding the buyer's nominated transport or sunset on the day after the sale. This subclause does not apply if the agent makes an announcement to that effect prior to sale.

- (a) Subject to the right of rejection in Clause 18, all conditions and warranties expressed or implied by law are hereby excluded from the sale to the extent that the law allows. All lots are open for inspection prior to the commencement of the sale and are sold with all faults, if any. No compensation shall be given for any faults, imperfections, errors of description, number in or of any lots sold or otherwise.
(b) Any claim or objection arising out of an error or misdescription in the provision of relevant information in terms of legislation or regulation concerning the National Livestock Identification Scheme (NLIS) must be made by 5:00pm on the seventh day after the fall of the hammer. No objection, requisition or claim against the vendor or agent in respect of such error or misdescription can be made after that time.
(c) Any statements made by the vendor or the auctioneer whether in writing or orally to the effect that any female has been pregnancy tested or scanned positive shall mean and require only that a certificate in writing shall be supplied to the buyer signed by a qualified veterinary surgeon or certified scanner certifying that the said female has been tested or scanned on the date specified in the certificate and that in the opinion of the surgeon or scanner was pregnant on that date.
(d) For slaughter cattle, the agent undertakes to make every reasonable effort to ensure that any NLIS cattle device number is transferred from the saleyard PIC to the purchaser's PIC on the NLIS database no later than midnight on the day of the sale.
(e) For other slaughter livestock the agent undertakes to make every reasonable effort to ensure that the NLIS information is transferred from the saleyard PIC to the purchaser's PIC on the NLIS database no later than midnight on the day of the sale.
(f) Where livestock have a food safety or market eligibility status derived from the National Vendor Declaration (NVD) and/or the NLIS/ERP database, the agent will inform the buyers by presale catalogue and/or announce the status prior to the offering of those lots.
- If delivery is made to, or possession obtained by, the buyer or its representative before full payment of the Price, then until full payment is received, the buyer:
 - does not acquire title to the livestock;
 - holds the livestock as bailee only for the vendor;
 - must act in a fiduciary capacity in its relationship with the vendor;
 - must store the stock separately or so that they are readily distinguishable from other livestock owned by the buyer;
 - is responsible for the safety and well being of the livestock;
 - may make a bona fide sale for market value of any or all of the livestock. As between the buyer and the subsequent buyer, the sale shall be made by the buyer in its own name and not as agent for the vendor, however as between the vendor and buyer, the sale shall be made as bailee and agent for the vendor; and
 - must keep and account for the proceeds of any subsequent sale separately from its other money and hold those proceeds, together with the benefits of any rights against subsequent buyers, on trust for the vendor.
- The purchaser agrees that:
 - Clause 20 creates a registrable security interest under the Personal Property Securities Act (Cth) 2009 (PPSA);
 - The Purchaser acknowledges the rights of the Seller (and/or the Agent if Clause 25 applies) to register a financing statement under the PPSA with respect to the security interest created by this clause;
 - the Livestock are collateral for the purposes of the PPSA;
 - to the extent permitted, the Purchaser waives any right the Purchaser has under the PPSA to receive notices; and
 - the date upon which the security interest created by this clause comes into force is the first date on which livestock are delivered pursuant to this contract
- The buyer may not make any claim against the vendor for actions by the vendor or its agent under clauses 20 or 21 and indemnifies the vendor and its agent against any loss, damage, costs, expenses, penalties, fines or claims suffered by the vendor, the agent or any person or entity arising from the vendor exercising its rights under clauses 20 or 21.
- Clause 23 applies whenever the agent pays the vendor before being paid by the buyer, which the agent is not bound to do. The agent is then the del credere agent of the vendor at law.
- The vendor hereby gives notice to the buyer of the assignments referred to in clause 23.3.
- When this clause applies, in addition to any rights of the agent that arise by operation of law, the parties agree that, subject to clause 23.5 the agent is subrogated to all rights of the vendor under these terms and conditions against the buyer.
- The vendor acknowledges that the agent may take enforcement, repossession or other action to recover any livestock for which the buyer has not paid in full, or the Price of such livestock, owing by the buyer under these terms and conditions:
 - when this clause does not apply, as agent of the vendor (including by reselling the livestock), and
 - when this clause applies, on the agent's own behalf exercising the rights of the vendor by subrogation or assignment under these terms and conditions (whether in the vendor's name or not) and, where title to the livestock has not passed to the agent, by selling the livestock as agent of the vendor without the agent having to account to the vendor for the proceeds of sale.
- The agent may at any time, assign, transfer, securitise or otherwise dispose of all or any of its rights under these terms and conditions and any debts created pursuant to it (including, without limitation, the rights assigned to it under clause 23.3).
- The vendor hereby irrevocably appoints the agent as the vendor's attorney to:
 - do at any time and in any manner as the agent thinks fit all acts necessary or desirable to perfect or improve the rights and interests afforded, or intended to be afforded, to the agent under these terms and conditions; and
 - appoint one or more sub-attorneys to do anything that the agent may do as the vendor's attorney.
- These terms and conditions do not render the agent liable to the buyer as vendor nor entitle the buyer to set off against the agent any right the buyer may have against the vendor or otherwise.
- The buyer acknowledges that the provisions of this clause 23 are intended solely for the benefit of the agent (and its assigns) and the vendor. The liabilities and obligations of the buyer will not be in any way affected:
 - by this clause 23, other than as it expressly provides; or
 - by the failure of the agent or the vendor or either of them to comply with the terms of this clause 23.
- The buyer must pay all amounts payable to the vendor or the agent under these terms and conditions without any deduction, withholding, set off or counterclaim whatsoever, whether the benefit of a deduction, withholding, set off or counterclaim is alleged to exist in favour of the buyer as against the vendor or the agent in any capacity whatsoever or any other person including any assignor of the vendor's or the buyer's interests under these terms and conditions.
- (a) The agent agrees that he is liable to pay to the vendor the Price, less such commission as is agreed between the vendor and the agent, and in the absence of any agreement such amount as is reasonable, and less the Fees that are payable by the vendor that were incurred by the agent on behalf of the vendor in relation to the sale of the livestock.
(b) In the event that the buyer pays the Price or part of it direct to the vendor then the agent has no liability to the vendor for the amount of such payment. Further, if the agent pays the vendor any amount which the buyer also pays direct to the vendor in respect of the same livestock, then the vendor must repay the agent that amount and the agent may debit that amount to an account held in the name of the vendor by the agent.
(c) Regardless of whether or not a sale has occurred the agent may, but is not under obligation so to do, instead of deducting payments owed to it by the vendor, debit the amount of the commission and fees to an account held in the name of the vendor by the agent.
- (a) The auctioneer has been retained by the vendor as auctioneer for the purpose of selling the livestock comprised in the lots. The terms of engagement between the auctioneer and the vendor do not extend to the provision of advice by the auctioneer to the vendor in relation to the safety or otherwise of the sale ring, the saleyards and the surrounding environments.
(b) The vendor, the agent and the buyer agree to comply with their several duties under the Australian Animal Welfare Standards and Guidelines for the Land Transport of Livestock and further to consign, manage, receive, transport and handle livestock in accordance with any other or additional requirements of animal welfare legislation specific to the jurisdiction in which livestock are consigned, managed, received, transported and handled in the course of the auction process.

CHAPTER THREE - VENDOR WARRANTY FOR CORRECT PRESENTATION AND DECLARATION

- This chapter applies only in the case of livestock and their companion animals sold at auction for slaughter when the buyer is the slaughterer and the livestock are transported direct from the sale yard to the meatworks at which they are slaughtered. This chapter does not apply if the buyer is a trader who subsequently resells the livestock to a slaughterer. A slaughterer is any person who pays the AMPC Processor Levy.
The warranty of a vendor is that livestock and their companion animals offered for sale at auction:
 - pass government and other regulatory authority requirements and inspections at the time of slaughter;
 - are of merchantable quality;
 - carry an NLIS device in accordance with State law;
 - in the case where a representation has been made in the pre-sale catalogue that the livestock have particular characteristics or are fit for a particular purpose or market, and such representations are based on information in any document, the livestock will have those characteristics or will be fit for the particular purpose or market; and
 - all information in any document provided by the vendor is true, complete and correct in all material respects.
- In the event of a breach by the vendor of the vendor's warranty and provided such breach is notified by the buyer to the agent by 5:00pm on the 7th day after the fall of the hammer then the buyer is not liable to pay the portion of the Price of such of the vendor's livestock to which the breach applies.
- However if the breach by the vendor is such that the livestock are not rejected outright but are instead downgraded then the buyer will pay the value of the livestock at their next highest and best use.
- In the case of a breach by the vendor of the vendor's warranty then the vendor will also be liable to the buyer for any further losses which the buyer might establish but the buyer will take all reasonable steps in co-operation with the agent and vendor to mitigate both the effect of the breach and the amount of any loss.
- Where a sentinel animal of a lot tests positive for chemical residue, or foreign material contamination and provided such test is certified and notified as required by these vendor warranty terms, then:
 - the buyer will be entitled to delay payment for the price of all livestock in that lot only; or
 - the vendor has the option, at the vendor's cost, of collecting the companion animals, if allowed by law, or of having the livestock slaughtered in which event the risk of further condemnations will be that of the vendor. Where product integrity is potentially jeopardised, the Processor has the right to refuse slaughter and send the livestock back to the consigning property at the vendor's cost.
- The auctioneer is liable to the buyer in respect of any breach of the vendor's warranty arising out of:
 - any error, by the auctioneer, of transcription of information from the NVD completed by the vendor to the pre-sale catalogue or the buyers post-sale summary;
 - any failure by the auctioneer to notify the buyer, prior to bidding, of any breach by the vendor of the warranty of the vendor if the buyer establishes that the agent knew of such breach prior to the sale; and
 - any failure by the auctioneer to announce prior to bidding, or disclose in the pre-sale catalogue, that the vendor has failed to provide a NVD that is complete in all material aspects.

CHAPTER FOUR - OWNERS RISK FOR CONDITION OF CATTLE

- This chapter applies only in the case of cattle and their companion animals sold at auction for slaughter when the buyer is the slaughterer and the cattle are transported direct from the sale yard to the meatworks at which they are slaughtered. This chapter does not apply if the buyer is a trader who subsequently resells cattle to a slaughterer. A slaughterer is any person who pays the AMPC Processor Levy.
Owners risk reflects the producer's responsibility to provide slaughter cattle for sale that are fit for human consumption. Cattle are fit for human consumption if they are not condemned as unfit by government. Owners risk applies if the condemnation is due to a condition in the animal which the buyer establishes, by the relevant government certificate, existed prior to the fall of the hammer.
A buyer with the benefit of owners risk protection is not liable to pay the Price of that animal to the vendor. The buyer remains nevertheless liable for all costs incurred after the fall of the hammer in transport, slaughter, testing and disposal of the animal.
Owners risk protection is available to the buyer of cattle to which this chapter applies if all of the following are satisfied:
 - a certificate is issued by government which states the relevant NLIS RFID tag number and PIC, the date of the certificate, the reason for condemnation and that the reason for condemnation existed prior to the fall of the hammer;
 - the certificate is received by the selling agent either in its original form or by fax or electronic communication in the form of data, text or imaging by 5:00pm on the 7th day after the fall of the hammer; and
 - if the condemnation is due to chemical residue the certificate follows testing in a government approved laboratory which establishes maximum residue limits in excess of the Australian limit.
- Owners risk does not apply, and the buyer must pay for the cattle, if the reason for condemnation is any of bruising, fever, partial condemnation or emaciation.

CHAPTER FIVE - NOTICES REQUIRED BY LEGISLATION

NSW Property, Stock and Business Agents Act 2002 Warnings

Penalties for collusive practices. It is an offence against the Property, Stock and Business Agents Act 2002 for a person to do any of the following as a result of a collusive practice, or to induce or attempt to induce another person by a collusive practice to do any of the following:

- to abstain from bidding; or
 - to bid to a limited extent only; or
 - to do any other act that might prevent free and open competition.
- Severe penalties may be imposed on persons convicted of collusive practices. The auctioneer has the right to make one bid on behalf of the vendor if the auctioneer clearly and precisely announces that fact prior to the sale.

Tasmania Legislation. An auctioneer conducting a public auction must not appear to acknowledge the making of a bid if no bid was made. A person must not participate in collusive practices by way of making or receiving an unlawful promise to abstain from bidding, not to bid except to a limited extent or do any other thing which may prevent free and open competition.

WA Auction Sales Act 1973 s31 NOTICE.

It is an offence to:

- induce or attempt to induce another person to abstain from bidding by means of a promise, expressed or implied, that the other person will have the right to elect to take over as buyer or to toss or draw lots to establish who is to become the owner;
 - abstain or agree to abstain from bidding as a result of such a promise;
 - knowingly enter or permit or cause to be entered in the auctioneer's record any name other than that of the actual successful bidder;
 - enter in the auctioneer's record the name of the buyer other than that of the actual successful bidder; or
 - in the case of successful bidder supply wrong information as to the name of the buyer to the auctioneer or to any person, firm or corporation on whose behalf the sale is conducted.
- The vendor, or any person on behalf of the vendor, or the auctioneer have the right to make no more than three bids.
