

Welcome to the Fairview Black Simmental Bull Sale

We hope, like ourselves, that you have been enjoying this wonderful extended growing season. We have been incredibly fortunate with good spring rain and follow up falls throughout summer that have extended right through to late autumn. This has all resulted in above average weight gains for the season with most classes of livestock around 15% heavier compared to the same time last year.

We are proud to welcome you to our third on-property sale and this year we are offering 51 Black Simmental composite bulls. Our disciplined breeding program offers you the opportunity to tap into breed leading genetics that are bred to perform in the Australian environment and produce progeny which have a high level of market compliance and acceptability.

Our focus is, and always has been, to help improve the profitability of the commercial beef producer by providing bulls that are well adapted and demonstrate a balanced genetic profile, thereby avoiding the antagonisms of over selection for a specific trait at the expense of others.

This balanced approach to genetic gain enables us to constantly keep boosting productivity while, at the same time, retaining adaptability. This is evident in our sale offering with 82% of bulls offered being above breed average for their Domestic Maternal and Export Maternal \$ Indexes.

This year's sale draft demonstrates our commitment to be at the leading edge of genetic development, with progeny represented by some of the best genetics available in the breed.

We look forward to seeing you on sale day and please feel free to contact us if you require any further information.

Tony & Roslyn

Programme

Inspection – 10.00am

Bull sale – 12.30pm

Complimentary morning tea and lunch will be provided.

Post-sale refreshments will be available

**TO BE SURE OF A CATALOGUE
PLEASE BRING THIS ONE TO THE SALE**

Disclaimer : Buyers please note that all reasonable care has been taken in the preparation of this catalogue and that the information is correct at the time of publication. However the vendor and their agents do not accept any responsibility for errors or misrepresentation of information included in this catalogue. Prospective purchasers should satisfy themselves by inspection or otherwise as to the accuracy or interpretation of the information included in this catalogue

FAIRVIEW - 2022 BULL SALE

Visitor Safety - PEOPLE ENTER THE SALE YARDS AT THEIR OWN RISK. Children are not permitted to enter the pens. All care is taken to ensure livestock pose a minimum threat, however we cannot predict or guarantee a bulls behaviour. All sale bulls have been assessed for temperament and are quiet to handle under normal circumstances. Sale day places bulls under stresses foreign to their normal routine. Use common sense while inspecting the bulls remembering not to get too close and to give an area of relief away from any pressure you or others may be applying to them.

Inspection of Bulls - Bulls will be penned by 10.00am on the morning of the sale for inspection. Presale inspections are encouraged by appointment with the vendor.

Location - 461 Redford Road Mungallala, head north at the pub and follow bitumen for 4.6 km then turn left and follow driveway 1km to cattle yards.

Selling System - Sale of animals will be conducted under the Helmsman Auction System. All animals are sold exclusive of GST. Sale will be interfaced with AuctionsPlus.

Phone Bidding - Phone bidding can be arranged prior to the sale by contacting selling agents Elders Mitchell - David Phillips on 0427 746 947 or Elders Stud Stock - Michael Smith on 0428 541 711.

Rebate - A rebate of 2% is offered to outside agents nominating buyers to the sale. A rebate of 4% is offered to outside agents nominating and accompanying buyers to the sale. Outside agents wishing to nominate a buyer must do so in writing 24 hours prior to the sale and settling within seven days.

Health - All bulls are tested negative for pestivirus and have undergone a 7 in 1, Pestiguard., Vibrio, Long range botulism and 3 day vaccination programme with boosters due 2023. Any bulls requiring further vaccinations will be held by vendor until immunised. Bulls are DNA sire verified, vet checked and soundness evaluated as well as semen motility and morphology tested. Fairview is a JBAS7 property.

Transport – To make getting your bull home stress free and to streamline the delivery process, we offer free delivery within a 200 km radius of vendor and free freight to major centres outside of this radius in QLD and NSW. Bulls will be delivered as close as possible to their final destination - transport from drop off is the responsibility of the purchaser.

Insurance – Ownership is transferred to the purchaser on completion of the sale, including animals remaining on the vendors property. We recommend you insure your animals against injury and death. An Elders representative will be available on sale day to assist with insurance.

Guarantee - To the best of our knowledge all bulls are in sound working order and have been independently structurally assessed as well as veterinary evaluated for structural and reproductive soundness, in the event of a bull proving to be infertile or incapable of natural service within 12 months of the purchase date, the vendor will credit the purchase price, less the salvage of the bull, provided the problem is not caused by injury, illness or disease incurred after taking delivery. Claims must be accompanied by a relevant veterinary certificate if requested by vendor for the conformation of any claim.

Bringing Your Bull Home – We recommend that when you bring your new bull home you have some other cattle in the yards (not bulls) so they have some company to settle in with. Feed them in the yards and give them time to settle into their new surrounds.

Breed Codes - SI = Simmental AA = Angus BR = Belmont Red CC = Charolais

About Us

Fairview Black Simmentals is owned and operated by Tony Horvath and Roslyn Ware. Consisting of the properties Fairview (3466 acres) and Cochranes (2530 acres) we are situated 5km north of Mungallala in Western Queensland. We originally ran the properties as a breeding and fattening operation producing EU and Jap Ox bullocks and then later as an Organic breeding and finishing property.

Black Simmentals were first incorporated into the base herd in 2009 and proved to be an immediate success. Our turn off was in high demand and our bullocks would grade consistently well, hitting market specs and achieving high MSA compliance. In 2016 we came to believe our herd had more to offer the beef industry and the decision was made to register our entire female herd with the Australian Simmental Breeders Association as well as Group Breedplan and performance recording began.

Our first Black Simmental bulls were sold by private treaty in 2018 and we have been holding an annual on property sale since 2020. To accelerate genetic progress we now conduct a three cycle AI program every year introducing genetics from leading herds throughout Australia, America and Canada.

Herd Management

The Fairview herd is fully performance recorded with Breedplan and registered with the Australian Simmental Breeders Association. We strive to produce genetics suited to the Australian production system.

Birth weights and calving ease are recorded, followed by 200 day weaning weights and docility scores, 400 day weights and 600 day weights are also recorded. All bulls have a scrotal circumference measurement at 400 days as a measure of puberty and sexual maturity, structural assessments are performed at 600 days and all bulls and replacement heifers are scanned for eye muscle area, intra-muscular fat and also rib and rump fat distribution.

Mature cow weight, body condition scores and hip heights are recorded on cows at weaning time as a measurement of female efficiency. All calving dates and joining history are submitted on breeders to establish gestation length and days to calving EBV's.

At calving, cows are given an udder score on teat size, udder evenness and udder suspension as well as a calving body condition score; with any cows outside of acceptable limits removed from the breeding herd. Our cows are never drenched and are exposed to the rigours of the natural environment; it is a management decision to let a cow experience some stress so that we can ultimately select for adaption.

Our females must be able to perform under conditions, just like those found in most commercial operations. Selection is placed on females that reach puberty early, are efficient and live long productive lives. Our typical joining spans 44 days beginning with the use of trait leading sires in a synchronised artificial insemination programme. This is then followed by another 2 cycles of AI incorporated with our resident cover sires, all resulting in a uniform and consistent calf crop.

Our calves are born in the late winter frost; they must hit the ground, stay healthy and grow. Females that require assistance with calving, have poor disposition or fail to bring a calf home at weaning are removed from the breeding herd.

UNDERSTANDING EBVs AND SELECTION INDEXES

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving. - **CE % Dir** = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age. - **CE % Daughters** = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination and hand mating records. Lower (negative) indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Days to Calving EBV (days) indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicates a shorter interval from bull-in date to calving and therefore higher fertility. **Carcase Weight EBV (kg)** is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 650 days.

Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

UNDERSTANDING EBVs AND SELECTION INDEXES

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses. **Intramuscular Fat EBV** (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

Selection Indexes Simmental selection indexes are calculated for four market specifications, namely, Domestic Maternal, Export Maternal, Northern Terminal and Vealer Terminal. These Indexes relate to typical Simmental herds in temperate Australia targeting these specifications. Indexes are reported as an EBV, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system. More information is available on selecting animals using a selection index. The Indexes are derived using the BreedObject technology. More information on this technology is available from the BreedObject web site.

Domestic Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 60-70 days). Steers are marketed at 430 kg live weight (240 kg HSCW and 6 mm P8 fat depth) at 14 months of age. Daughters are retained for breeding.

Export Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the export trade. Steers are finished on grain (e.g. 120 days) and marketed at 700 kg live weight (380 kg HSCW and 8 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

Northern Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (e.g. Brahman cows) targeting the export trade. Steers are finished on grass and marketed at 630 kg live weight (345 kg HSCW and 12 mm P8 fat depth) at 28 months of age. This is a terminal production system therefore no daughters are retained for breeding.

Vealer Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the vealer trade. Vealers are weaned and sold at 8 months of age weighing 350 kg (195 kg HSCW and 6 mm P8 fat depth). This is a terminal production system therefore heifers are not retained for breeding purposes. Note that \$Index Values for individual animals are sensitive to the assumptions used in the BreedObject analysis to calculate the relevant selection index. More information is available on the weightings used in the Simmental Selection Indexes.

Beef Class Structural Assessment System

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on affect of structural improvement through out all sectors of the beef cattle industry.

Jim Green and Liam Cardile of 'BEEFXCEL' service many of the leading seedstock herds in Australia. 'BEEFXCEL' is not involved in any genetic marketing or specific breeding advice and therefore has no conflict of interests to influence their stock appraisal.

The integrity of the structural data provided by 'BEEFXCEL' is recognised throughout the industry as Jim and Liam are fully INDEPENDENT assessors.

All the Fairview sale bulls were assessed by Jim Green of 'BEEFXCEL' on the 29/04/2022.

How to Use The Beef Class Structural Assessment System

The Beef Class Structural Assessment System uses a 1-9 scoring system:

- A score of 5 is ideal (Note: Except for Temperament where a Score of 1 is ideal);
- A score of 4 or 6 shows slight variation from ideal, but this indicates most animals. An animal scoring 4 or 6 would be acceptable in any breeding program;
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs.

However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal;

- A score of 2 or 8 are low scoring animals and should be looked at closely before purchasing;
- A score of 1 or 9 should not be catalogued and are considered culls.

AuctionsPlus

How to Register and Bid on AuctionsPlus

- 1 Go to www.auctionsplus.com.au to register at least 48 hours before the sale.
- 2 Select "**Sign Up**" in the top right hand corner.
- 3 Fill out your name, mobile number, email address and create a password.
- 4 Go to your emails and confirm the account.
- 5 Return to AuctionsPlus and log in.
- 6 Select "**Dashboard**" and then select "**Request Approval to Buy**".
- 7 Fill in buyer details and once completed go back to Dashboard.
- 8 Complete buyer induction module (approx. 30 minutes).
- 9 AuctionsPlus will email you to let you know that your account has been approved.
- 10 Log in on sale day and connect to auction.
- 11 Bid using the two-step process – unlock the bid button and bid at that price.
- 12 If you are successful, the selling agent will contact you post sale to organise delivery and payment.

The Fairview Programme, one of Solid Commitment!

At Fairview, we understand that our role as a seedstock producer comes with a lot of responsibility. We have long held the belief that a successful beef breeding operation is built around durable females that have fertility, milking ability, good dispositions and longevity.

Our females must be able to produce and wean an exceptional calf on an annual basis and to also demonstrate efficiency on grass. It's these cows that make a positive impact on our breeding programme and it's from these cows that the best new generation heifers and bulls are retained.

We believe generational turnover is vital to accelerating genetic progress and we expect our heifers to produce right up there with their mothers and to continue to improve as they mature. The key to achieving this is by having them mated correctly and to be using the best predictable sires that are available.

This year's sale team have been produced with this common-sense approach and are represented by some very influential sires. These sires have the unique genetic combination of maternal and fertility traits, as well as performance that is matched with carcass quality.

A feature of this year's sale draft is a large offering by CCR Cowboy Cut (13 sons) as well as Bonnydale Nukara (13 sons). Cowboy Cut has cemented himself as one of the breed's greats and is one of the highest \$ Indexing bulls active in the breed. Bonnydale Nukara has proven himself as a very successful bull for use over heifers without sacrificing on growth. He is a true curve bending bull who sires low birth weight progeny, has high growth with heavy carcass and is a trait leader for Calving Ease Direct and Birth Weight.

Our standing sire Woonallee Legacy L183 is represented with 10 sons in the sale team. He is one of the most successful bulls we have ever owned. A great structured bull, genetically well balanced, and the fleshy type that you just can't get any more meat on. He is wide based, thick, deep and long. Not only has he proven himself with his growth and carcass, he also has maternal power and is producing some exceptional daughters.

Other successful sires represented include Hooks Yellowstone, Gw Lucky Dice, Wombramurra Lucky Break, as well as Mr NLC Icon and Woonallee Playboy.

Once again, all bulls this year are presented as two-year-olds. They have been prepared with longevity in mind; after weaning they are grown out on grass with access to a mineral lick. At eighty days prior to sale, they are prepared out in the paddock on grass with access to a meal-based production lick as well as oaten hay.

We strive to take the guess work and assumption out of purchasing a Fairview bull. We present our bulls in ready to work condition, showing enough growth and muscle expression to do their genetics justice. They have undergone extensive measuring and weighing throughout their life, as well as pre-sale semen and morphology testing. Sale weights and supplementary pre-sale fat and muscle scanning is also undertaken as well as all bulls undergoing a comprehensive vaccination programme.

With the combination of phenotypical raw data, breedplan technology and Genomic enhanced EBVs, all coupled with structural soundness, you are best informed to make your selection come sale day. This will all obviously be influenced by your own breeding programme as well as the markets that you intend to supply.
