POLL DORSET STUD

6TH ANNUAL RAM SALE

9th September 2022, 12.30pm

Inspections from 11.30am

Interfaced with AuctionsPlus

“MORVAH PARK”
1224 Moonee Swamp Rd, Deniliquin
www.sabersheep.com

Steve and Linda would like to welcome you to our 6th Annual Production Sale. Saber Poll Dorset sheep stud was founded in 1958. Steve and Linda took over the management of the stud in 2011 from Steve's father Rod. Rod remains involved with the stud as a mentor and we are thankful for his assistance and breeding knowledge. This year marks 64 years of continuous Poll Dorset breeding by the Fawns family.

Saber invests heavily in Genetics and the majority of rams presented today are progeny from our Artificial Breeding program where we are able to source and use the best genetics available from all over Australia. We are pleased with the early growth, quick maturing lambs and muscling which we are seeing in our flock. While maintaining good structure and confirmation is paramount, we are also now focusing on shifting to improving the eating quality of Australian lamb. We continue to be members of Meat Elite Australia a collaborative group of Poll Dorset breeders from across Australia who are committed to giving clients a genetic edge, and working to produce prime lambs for now and the future of the sheep meat industry.

Our aim is to be able to assist our clients by providing quality rams that are objectively measured and can improve your operation's productivity and importantly profitability. This goal is achieved through participation of carefully selected breeding programs. Each lamb is weighed and tagged within 24 hours of birth and objectively measured up until sale.

Over the last few years, we have been introducing White Suffolk genetics into our flock with the aim of being able to provide the option to our clients to use both Poll Dorset and White Suffolk rams. This year we have several Poll Dorset X White Suffolk rams available for purchase. We are working toward being able to provide a greater selection of White Suffolk rams each year and believe both breeds are well suited to both the district and meat industry. Fertility matters and would like to highlight our rams are solely grass feed meaning they are work and paddock ready.

We have also started an on-farm experiment with the investment of hair sheep as a project to see what opportunities this may bring into the future. We are attracted to these breeds for their easy management, together with greater predicted demands on shearers and the lower value of course wool types, we are looking to alternatives for the future where it may be increasingly difficult to obtain labor and social license from the market to accept some current practices like tail docking. At present we have chosen Australian Whites but have an open mind to the outcomes.

With dam levels full right across the catchment, lets hope this is year 2 of the next 10 golden years of agriculture and be positive that spring will finish the winter crops and lamb markets remain strong.

We thank you for your ongoing support and attendance at today's sale and wish you well for the season ahead.

Yours faithfully

Steve and Linda Fawns

Understanding LAMBPLAN ASBVs

Rams with lower ASBVs for birth weight (BWT) produce lambs with lower birth weight. Both low (lamb survival) and high (lambing difficulties) birth weights should be avoided.

Rams with more positive ASBVs for post weaning weight (PWT) produce lambs that grow quicker and reach target weights in a shorter time. This ram will produce lambs that are, on average, 3kg heavier at post weaning age (7.5 months) than a ram with an ASBV of 0.

Worm egg count (WEC) ASBVs estimate an animal's genetic potential for worm burdens. Lower WEC ASBVs are desirable. This ram will, on average, sire progeny that will have 5% fewer eggs/gram than a ram with an ASBV of 0.

Trait	BWT (kg)	WWT (kg)	PWT (kg)	PFAT (mm)	PEMD (mm)	WEC (%)	INDEX
ASBV	0.3	4	6.0	-1.5	1.0	-10	150
Acc	43	63	71	59	69	37	

Rams with a more positive ASBV for weaning weight (WWT) will, on average, produce lambs that grow quicker to weaning. This ram will produce lambs that are 2kg heavier than a ram with a 0 ASBV for WWT.

Rams with a more negative ASBV for post weaning fat (PFAT) will produce lambs that are leaner, at the same weight. This ram will produce lambs that are, on average, 0.75mm leaner at the GR site when compared to a ram with a FAT ASBV of 0.

Rams with more positive ASBVs for post weaning eye muscle depth (PEMD) produce lambs that have more muscle, independent of weight, and a higher lean meat yield. This ram will produce lambs that have, on average, a 0.5mm deeper eye muscle than a ram with a 0 EMD ASBV.

An index is a guide to the value of a ram for a particular market. Rams with higher indexes will produce lambs that are more suited to that particular market target. It is important to understand what market the index applies to before using an index.

- An ASBV of 0 is the average of the 1990 drop. It is important to compare ASBVs against current industry average.
- *Note: A useful rule of thumb for converting ram ASBVs into lamb production differences is to simply halve the ASBV (as rams contribute half the genetics of the lamb).*
- Accuracy - published as a percentage, is a reflection of the amount of effective information that is available to calculate the ASBV. All ASBVs are now published with accuracies. The higher the percentage, the closer the ASBV is to the true breeding value of the animal. Breeding values without accuracies are Flock Breeding Values (FBVs) and can only be compared within the flock.
- MLA acknowledges the contributions of the Australian Government and AWI in the development of this publication.

Sheep Genetics is a program of Meat & Livestock Australia Limited ABN 39 081 678 364

Terminal Carcass Production (TCP) index

Replacement for Carcase Plus

Key points

- ✓ Carcase Plus has been an important index for the sheepmeat industry but it has been found to have a negative impact on eating quality. Because of this and the industry's focus on delivering high eating quality outcomes for consumers, the index will be retired in March 2020.
- ✓ Carcase Plus will be replaced with the Terminal Carcass Production index. To assist in the transition between indexes both Carcase Plus and Terminal Carcass Production will be available for the 2019 ram buying season.
- ✓ The Terminal Carcass Production (TCP) index will give similar improvements in growth and lean meat yield as Carcase Plus while also maintaining eating quality.

What is the new TCP index?

Indexes help producers select animals for use within a breeding program when there are a range of traits of economic or functional importance. This ensures that genetic gain in one trait is not made in isolation from other traits. Using indexes in ram purchasing decisions allow producers to make balanced genetic progress towards more profitable sheep.

The TCP index has been created to assist producers to achieve both gains in their major production traits, such as post-weaning weight and muscling, as well as ensuring consumer satisfaction from lamb is maintained through focusing on key eating quality traits such as shear force (tenderness) and intramuscular fat (marbling).

The TCP index is designed to suit a production system where:

- ✓ all progeny are terminal
- ✓ improving growth and muscle is of commercial benefit
- ✓ increasing lean meat yield has a positive financial impact
- ✓ a small degree of emphasis is included to maintain or improve eating quality.

Using the TCP index

The TCP index, unlike Carcase Plus, is on a scale that is aligned with other Sheep Genetics' indexes and is represented in economic terms with a unit increase in the index reflecting an additional dollar per ewe joined per year. To assist in comparing rams, Sheep Genetics recommends using a percentile band table as reference. The figure below, which is based on the percentile band table, highlights the TCP index value for significant percentiles for the 2018 drop animals.

Percentile band range graphic for TCP index 2018 drop animals

LAMBPLAN terminal indexes

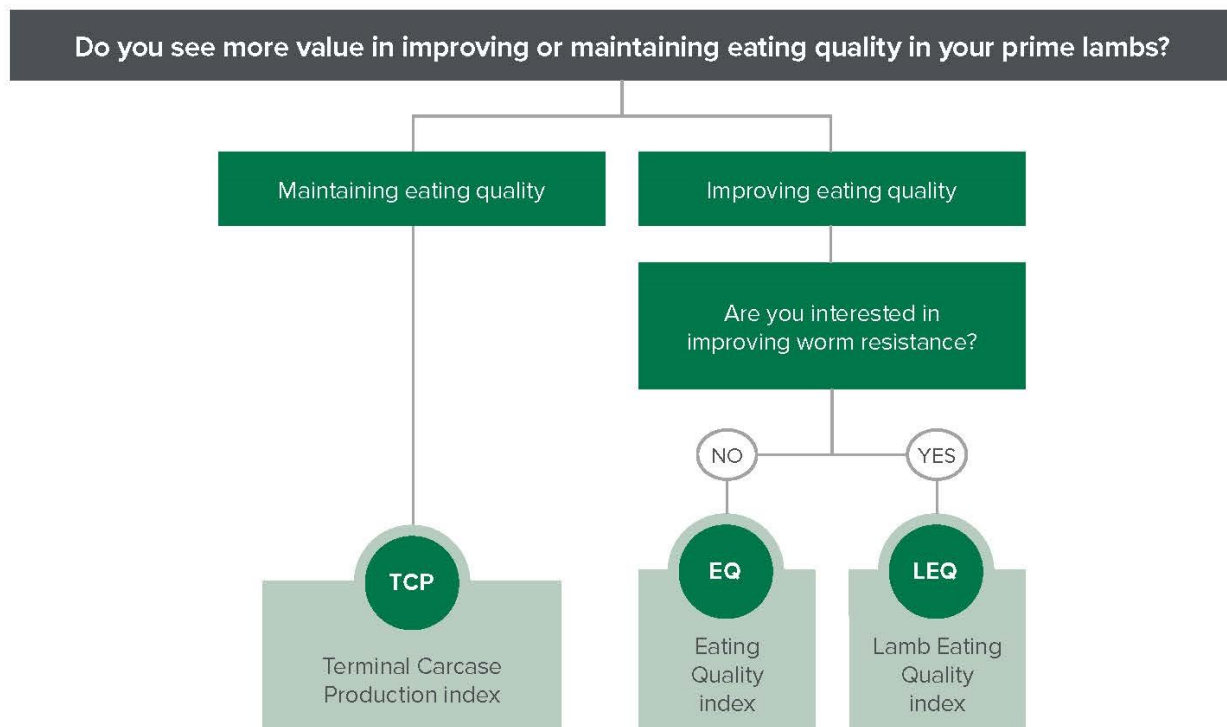

A ram buyer's guide

Indexes help you select animals for use within a breeding program when there are many traits of importance.

Using indexes in your ram purchasing decisions allows you to make balanced genetic progress towards more profitable sheep. A ram with a higher index will produce progeny that are more profitable in that production system.

Choosing the right index

The following flowchart helps producers determine the best index for their terminal production system:

How to use the chosen index to assist in purchasing decisions:

Before the sale:

1. Rank animals in the sale on the value of your chosen index.
2. Consider the individual ASBVs which are important to you to create a short list of rams to look at on sale day.

At the sale:

3. Look through your short list of rams to find the ones that meet your structural and type requirements.

INFORMATION ON SALE RAMS

All rams in this catalogue are Autumn and Spring drop 2021. We follow a strict vaccination program with all sheep being vaccinated as lambs with Gudair and Rams being vaccinated every 6 months with 6 in 1. Rams have been vaccinated with Glenvac 6 in 1 with B12 prior to Auction. Rams are vet checked prior to sale.

**Steve and Linda wish to thank all buyers
and underbidders for their support on this
our 6th On Farm Production Sale.**
