**582 Eddington Road, Carisbrook, Vic.**  
**Phone: (03) 5464 2264      Mobile: 0407 843 711**

## GLENORE POLL DORSET STUD

Here at Glenore, we have been breeding top quality Rams for 60 years.

Our breeding program aims to produce rams with a true Dorset type, excellent spring of rib, early maturity and high yielding carcasses for all marketing options - suckers, trade or export.

Our flock rams are purely grass fed. This provides you, the Primary Producer, the ability to finish your stock on pastures and know that you also will have desired results.

We at Glenore believe we have a selection of high quality Stud Rams for your selection.

After a number of show less years throughout COVID-19 Glenore have returned to the ring with some exceptional results, including Champion and Reserve Champion Ewes at the Victorian Sheep Show, Junior Champion and Reserve Champion Ram and Reserve Champion Ewe at Hamilton Sheepvention and numerous more. Majority of this years outstanding line up are sired by Glenore Rams that we believe have breed exceptionally.

Glenore have recently purchased a new Stud Sire in partnership with Sunnybanks Stud, **Abelene Park 164-21** (pictured below) was purchased for \$14000 at the recent Australasian Dorset Ram Sale in August 2022. The Junior Champion Ram at the Australasian Dorset Championships is an extremely balanced, smooth ram with true Dorset type and we look forward to seeing his progeny in 2023.

This year we will be holding our 12th Annual On Property Ram Sale. We are very pleased with the quality of Stud and Flock Rams that will be up for offer. With solid returns over the last 12 months, producers can feel confident in seeking the best quality genetics available to maximise returns. This years sale will be again interfaced with AuctionsPlus and Rams available for inspection by appointment from the 1st of October.

We welcome all new and old clients to our Annual On Property Ram Sale.  
For any inquiries do not hesitate to contact us!

We look forward to seeing you soon and guarantee this years line up will not disappoint!

Best Regards Pete, Gill and Family

## GLENORE STUD SIRES

### GLENORE 200-20

Used as a Ram Lamb, Best Ram Lamb of the 2020 drop. Well balanced with plenty of meat.

### GLENORE 5-16

Older, Meater Ram used for back up in the 2021 drop.

## WHAT IS THE MEAT INDEX?

The meat index formula is based on the eye muscle width (A), eye muscle depth (B) and fat (C) measurements. A higher predominance is given to eye muscle width (A) because it is more heritable while eye muscle depth (B) is influenced by environment factors. Fat (C) is penalised slightly. The resulting number is then adjusted for the age of the sheep, so the index is what the sheep's index would have been at eight months of age.

## WHY THE MEAT INDEX?

The meat index allows a group of young sheep with different live weights, eye muscle dimensions and fat depth to be analytically compared.

Referring to the diagram at right, research has shown that:

- Eye muscle width (A) is more to do with the type of animal, i.e. shape and leanness.
- Eye muscle depth (B) is associated with the environment; feeding etc., which could change the ranking, if the animals were under stress at the time of scanning.

## SCANNING MEASUREMENTS

Scanning for performance traits in animals has become a significant on-farm measuring tool for many years.

Australian Stockscan Services P/L scanners assess sheep at around 8–12 months of age for:

- Live Weight (LW)
- Eye Muscle Width (A)
- Eye Muscle Depth (B)
- Fat Depth (C)
- Eye Muscle Area (EMA) is calculated using the eye muscle width (A) and depth (B) measurements (A x B).
- Eye Muscle Area (EMA) to Live Weight (LW) ratio calculated.

Fat Depth (measurement C) affects the index only slightly.

## MUSCLE TO WEIGHT RATIO

The muscle to weight ratio figure (EMA/LW) is calculated to help the breeders identify sheep with more meat, thus higher yielding carcasses. With the introduction of VISCAN these higher yielding carcasses will be more profitable.

## LOIN MEASUREMENT

Stockscan in New Zealand has been working with Agresearch and together have perfected a technique to provide a loin measurement. We feel this has tremendous benefit to breeders and their clients.

Loin measurement will identify lambs which have good body length and are well muscled. Shoulder issues and mobility are a problem related to shorter sheep; these types are not able to progress into a class of heavier carcass weights. Identifying longer bodied sheep with optimal muscling could have benefits for the sheep industry.

If requested, loin measurement will be available to Australian clients and the processed results included with your normal analysis data report.

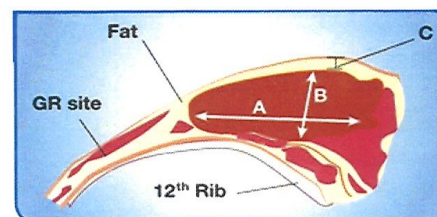

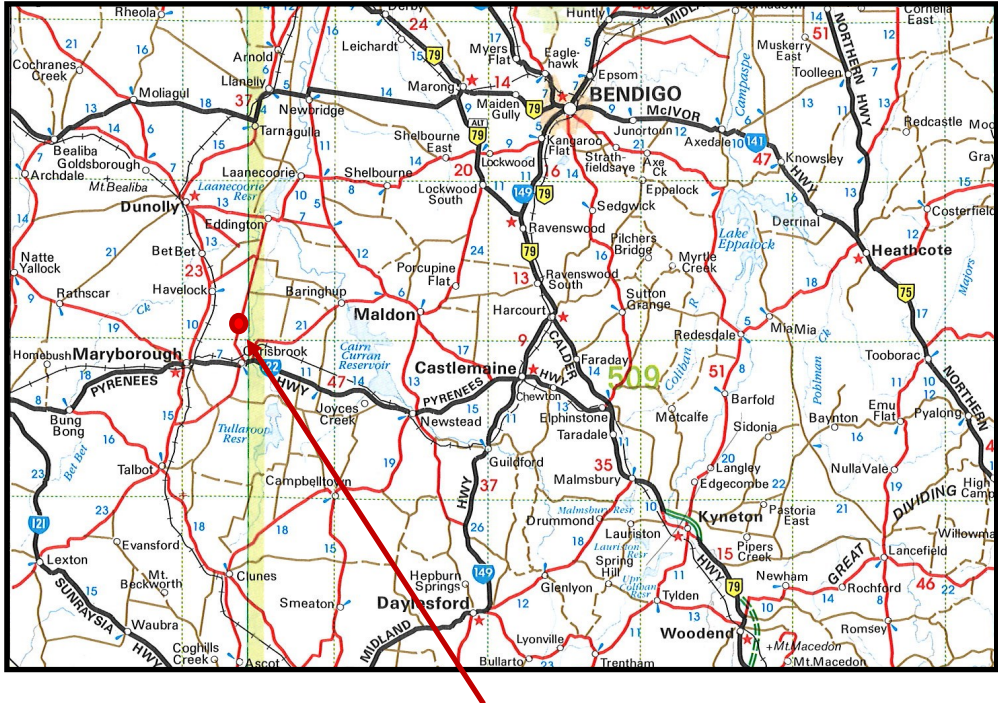

Figure 1: Exposed 12<sup>th</sup> rib on the carcass cut through the last thoracic and first lumbar vertebrae.
