JK CATTLE COMPANY

ANGUS & BRANGUS

Online Yearling Bull Sale

23RD - 30TH SEPTEMBER 2022

INSPECTION DAYS: "CAMILAROI WEST", CONDAMINE QLD

36 | **ANGUS & BRANGUS YEARLING BULLS**

Welcome

This year will be one to remember in the beef industry, with strong markets throughout the supply chain, and an abundant season for many. For us, 2022 has also been a year of firsts, with our inaugural on-property bull sale in August, and now our first online yearling bull sale.

The decision to sell our yearling bulls through an online sale this year has come about in an effort to allow everybody a fair opportunity to have first pick of the yearlings. The method we have chosen is a helmsman-style timed auction on AuctionsPlus, which will enable buyers flexibility to bid on any bull, regardless of lot order.

The auction will be held over a period of one week, with two inspection days during that week to accommodate time commitments. All bulls will also have individual videos online. We will offer flexible delivery options, between the conclusion of the sale and mid-December.

We are very thankful to those who have supported us in the past by purchasing yearlings out of the paddock, and we are hoping this proposed new format will better satisfy those wishing to purchase.

The bulls we have selected for the yearling sale are growing quickly, and many contain breed-leading traits that have made us question selling them now, instead of at auction as two-year-olds. However, we are committed to breeding quality across our whole herd, whilst offering flexibility around how clients can purchase the bulls we breed.

We have been joining yearling bulls to heifers and mature cows for as long as we can remember, so they are big enough to get the job done.

As an example, last year we joined QLLR622 (lot 28 in our August auction) as a yearling to 58 cows. At the time of joining in mid-October, R622 was 540kg. Around half of this group were A.I.ed first, however all of our first calving heifers are joined straight to the bull for their second joining. We are currently seven weeks into our calving period, and have 23 calves on the ground so far by R622.

We understand that yearling bulls are not for everyone, some have tried them and prefer to buy two-year-olds. Yearlings can work themselves pretty hard, and may never recover if not observed in time and given the adequate nutrition. However, for others they are ideal, and some clients say they will only buy yearlings from now on. It really depends on your situation, management and environment.

Some people like to buy them as yearlings, lightly use them as yearlings to then acclimatise them before giving them a heavier workload as a two-year-old and subsequently thereafter. Some find they mix in better with older bulls because they simply do not have the weight to put in a fair dinkum fight, and therefore they submit straight away, reducing the risk of injury when mixing bulls. It can take a number of years for a bull used as a yearling to look fat if nutrition doesn't allow, but this doesn't mean he won't work. The upside is he is lighter for longer, further reducing injury risk.

All bulls are DNA sire verified, and all of the Angus have also been assessed genomically to increase EBV accuracy through single-step Breedplan analysis, and hopefully one day the Australian Brangus herd will also have this capability.

The yearling bulls have the same health treatments and tests as our two-year-old bulls, as outlined on the following pages.

The semen test results and weights will be provided on the supplementary sheet, which will be available online.

If you have any questions or would like any further information, please feel free to contact us and we will be happy to assist.

Justin & Kate Boshammer

JK CATTLE COMPANY

ANGUS & BRANGUS

Online Yearling Bull Sale

23RD - 30TH SEPTEMBER 2022

INSPECTION DAYS:

TUESDAY 27TH & FRIDAY 30TH SEPTEMBER
10:00am - 3:00pm
"CAMILAROI WEST", CONDAMINE QLD

36 | ANGUS & BRANGUS YEARLING BULLS

ONLINE BIDDING

AuctionsPlus

Phone: (02) 9262 4222

Email: info@auctionsplus.com.au

SALE DATES & TIMES

The sale will open on Friday 23rd September at 2:00pm, and will close on Friday 30th September (the timer will come on at 2:00pm).

SELLING SYSTEM

The sale of the bulls will be conducted as an online only simultaneous (SIM) auction under the AuctionsPlus terms and conditions. This means all lots are offered for sale at the same time.

All simultaneous auctions conclude via a timer system. Once the timer is visible at the top of the auction it controls the auction finishing – dependent on bidding activity. The timer will count down towards zero, from the nominated time, and if no bids are placed, the auction will close.

Please familiarise yourself with the AuctionsPlus system prior to the sale if you are planning to bid. You will need to sign up and complete your buyer registration with AuctionsPlus.

All bulls sold will be exclusive of GST. Settlement of accounts will be done through Ray White Rural Dalby at conclusion of the sale.

INSURANCE

All bulls are at the buyer's risk from the close of the sale, so we strongly recommend insuring all purchases.

Please arrange this with your agent or existing insurer if you have one, otherwise our agents at Ray White Dalby can assist. Their preferred insurer is:

Ainsley Simpson, Austbrokers Dalby Insurance
0427 574 823 ainsleysimpson@dalbyib.com.au

AGENT REBATE

2% commission will be paid to any agent who introduces a buyer, and settles within seven days. A letter of introduction must be provided to our agents Ray White Rural Dalby prior to the sale.

BULL MOVEMENT

No cattle tick clearance required.

We are a J-BAS 7 herd, and our last sample test was June 2021.

DELIVERY

Buyers can take delivery of their bull/s at any time from the conclusion of the sale through until mid-December.

We will do our best to personally deliver all bulls at no cost, direct to the buyer's property, or otherwise to a suitable drop-off point.

This offer will be somewhat influenced by the overall preferred times of delivery, quantity of bulls purchased, and destinations/routes. We will assist wherever possible, and be in touch on conclusion of the sale to establish a plan for deliveries.

INSPECTION DAYS

Inspection days will be held at "Camilaroi West", Condamine, on Tuesday 27th September and Friday 30th September, 10:00am-3:00pm. Lunch and refreshments will be available.

DIRECTIONS

"Camilaroi West" is located 5km north west of Condamine, on Henrys Road.

From Condamine, travel 2km towards Miles on the Leichhardt Highway, and turn left onto Henrys Road.

From Miles, travel 30km towards Condamine on the Leichhardt Highway and turn right onto Henrys Road.

The sale complex is 3km along Henrys Road, on the right.

INSPECTION DAY SAFETY

Whilst our focus on selecting for temperament is paramount, please realise that sale days and inspection days place unusual stresses on bulls, and that they may act out of nature.

If you choose to enter inspection pens, please be mindful of your safety at all times, and realise you are doing so at your own risk. We ask that anyone under the age of 16, or those with mobility problems do not enter the pens on inspection day. We ask that prams are not brought into the inspection pen area, and that children are supervised please.

PHONE SERVICE

There is very good mobile coverage at "Camilaroi West', should you wish to bid online while attending inspection days.

VIDEOS

A video will be provided on every bull, particularly to assist those who may not be able to attend the inspection days. These videos will be available during the week prior to the sale opening, and will be available on our website.

BRANGUS DNA RESULTS

We have completed gene testing on the Brangus bulls to provide information on their polled status, coat colour and tenderness rating.

There are 16 Brangus bulls on offer, however a resubmission of the DNA sample was required for one of these bulls (lot 31). We don't expect his genetic results will be available prior to the sale.

Polled Status – 13/15 Brangus bulls have been tested as Homozygous Poll. Two bulls have been tested as Hetrozygous Poll.

Coat Colour – 14/15 Brangus bulls have been tested as ED/ED (Homozygous Dominant Black). One bull has been tested as ED/E+ (Dominant Black/Wildtype).

Tenderness Ratings – Increase in 'tenderness' is associated with favourable alleles seen within the selected marker panel. Scoring is 1 to 10, where 10 is the most favourable number of alleles present.

DAM FERTILITY DATA

Number of calves and average calving interval (ACI) is provided in this catalogue for every bull's dam. We record all birth weights and birth dates, so have a lot of historical data on our females – if there is additional dam data you would like from a bull's pedigree, please just let us know.

The dam data averages across this sale are 4 calves for an ACI of 365.2 days.

Health & Fertility

All bulls in the sale are:

- Registered with their relevant breed society
- Breedplan performance recorded with genomics
- DNA sire verified*
- Semen motility and morphology tested
- Independently structurally assessed
- Blooded for tick fever (3-germ blood)
- Tested free of pestivirus
- Vaccinated for 7 in 1, 3 day and vibrio
- Dam fertility data is provided on all bulls (number of calves and average calving interval)

Semen Testing

All bulls will have undergone and passed a Bull Breeding and Soundness Evaluation (BBSE) adhering to the standards of the Australian Veterinary Association by veterinarian Dr Kim Groner. All bulls have undergone a morphology assessment by Rocky Repro.

All bull weights, scrotal measurements, and semen motility and morphology results will be provided on the supplementary sheet at sale time.

Breeding Guarantee

If there is ever a problem with any of our bulls, we would appreciate being the first to know. We are happy to work with our clients to provide guidance and assistance with any issues.

All of our bulls are sold with a 12 month breeding guarantee.

If a bull is found to be infertile or incapable of natural service (which has not occurred due to disease or injury), we will offer to exchange the bull for a replacement bull, or provide a credit to be used at a future JK Cattle Company sale, less the salvage value of the animal.

Any claims should be made in writing within 12 months of the sale date, and accompanied by a certificate from a registered veterinarian stating the nature of infertility.

This guarantee does not include interest, expenses or damages.

Animals injured or lost as a result of accident, negligence or any disease are not covered by this guarantee.

Please check your bulls during breeding season and contact us if you have any concerns.

Structural Soundness Scoring

Structural soundness scores for TACE are collected using the Beef Class Structural Assessment System.

Scores are collected for traits related to feet and leg structure using a 1 – 9 scoring system, where:

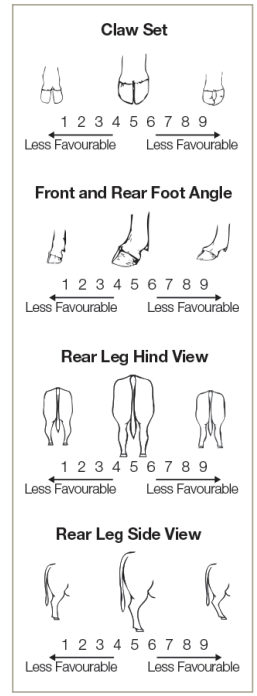
- **A score of 5 is considered ideal. A temperament score of 1 is preferable.**
- **Scores of 4 and 6 show slight variation from ideal, but this includes most animals. Any animal scoring 4 and 6 would be acceptable in any breeding program.**
- Scores of 3 and 7 show greater variation, but would be acceptable in most commercial breeding programs, however seedstock producers should be wary.
- Scores of 2 and 8 are low scoring animals and should be looked at carefully before purchasing.
- Scores of 1 and 9 should be considered culls.

Structural soundness scores for TACE must be collected by an accredited technician. We have used Roger Evans, Bovine Scanning Services (Accreditor Number: 1018).

In this catalogue we have provided the raw data on each bull in this table.

The Angus bulls also have structural EBVs.

STRUCTURE					
CLAW	F	6	R	6	Front & Rear Feet Claw Set
ANGLE	F	6	R	6	Front & Rear Feet Angle
REAR LEG	S	5	H	5	Rear Leg Side & Hind View
TEMPERAMENT		1			Docility/Temperament



Recessive Genetic Conditions

This is information for bull buyers about the recessive genetic conditions in the Angus breed, Arthrogryposis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) & Developmental Duplications (DD).

Putting undesirable Genetic Recessive Conditions in perspective

All animals, including humans, carry single copies (alleles) of undesirable or "broken" genes. In single copy form, these undesirable alleles usually cause no harm to the individual.

But when animals carry two copies of certain undesirable or "broken" alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or "broken" genes.

Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by "broken" alleles within the DNA of individual animals. When a calf inherits two copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying two copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

How are the conditions inherited?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition.

For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele)appear normal and are known as "carriers".

What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just one copy of the undesirable allele), and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	TESTED AM FREE
AMFU	BASED ON PEDIGREE AM FREE - ANIMAL HAS NOT BEEN TESTED
AM_%	_% PROBABILITY THE ANIMAL IS AN AM CARRIER
AMC	TESTED AM-CARRIER
AMA	AM-AFFECTED

For NH, CA and DD, simply replace AM in the table with NH, CA or DD.

Registration certificates and the Angus Australia web data-base display these codes. This information is displayed on the animal details page and can be accessed by conducting an "Database Search" from the Angus Australia website or looking up individual animals listed in a sale catalogue.

Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with an unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information, contact Angus Australia's Breed Development & Extension Manager on (02) 6773 4618.

AuctionsPlus

How to Register and Bid on AuctionsPlus

1. Go to **www.auctionsplus.com.au** to register at least 48 hours before the sale.
2. Select "**Sign Up**" in the top right hand corner.
3. Fill out your name, mobile number, email address and create a password.
4. Go to your emails and confirm the account.
5. Return to AuctionsPlus and log in.
6. Select "**Dashboard**" and then select "**Request Approval to Buy**".
7. Fill in buyer details and once completed go back to Dashboard.
8. Complete buyer induction module (approx. 30 minutes).
9. AuctionsPlus will email you to let you know that your account has been approved.
10. Log in on sale day and connect to auction.
11. Bid using the two-step process – unlock the bid button and bid at that price.
12. If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

Understanding EBVs

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle.
The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

For more information visit: www.angusaustralia.com.au

CALVING EASE	CED	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEM	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
GROWTH	200 DW	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 DW	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 DW	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier live weight.
	MILK	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY	DTC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASE	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm^2	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	RIB	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RUMP	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
FEED/TEMP	NFI-F	kg/ day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	DOC	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
STRUCTURE	FOOT ANGLE	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	CLAW SET	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
SELECTION INDEXES	$A Angus Breeding Index	$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. Higher selection indexes indicate greater profitability.	
	$A-L Angus Breeding Low Feed Cost Index	$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. The $A-L index is similar to the $A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the $A aims to maintain mature cow weight, the $A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions. Higher selection indexes indicate greater profitability.

DNA RESULTS: Resubmission of DNA sample was required, so results have been delayed.
The bull is physically polled, and based on his pedigree, we expect a result of homozygous polled and ED/ED.

Disclaimer

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV: both parents have been verified by DNA.

SV: the sire has been verified by DNA.

DV: the dam has been verified by DNA.

#: DNA verification has not been conducted.

E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

DISCLAIMER: All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor nor the selling agents make any representations for the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information included in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances.
If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.
