HOW TO FIND US

AGENT

Clemson Hiscox & Co Pty Ltd

BUYERS REGISTRATION

Would all prospective buyers please register at the agent's desk Your PIC number will be required.

REBATE

4% rebate will be paid on purchases through outside agents attending the sale.

DELIVERY

If you would like your purchase(s) delivered and/or shorn/crutchd please make arrangements with the Macquarie staff.

HEALTH

Macquarie Dohne Stud is a Brucellosis accredited (W84/38) & OJD free. Biosecurity and health status has always been a priority at Macquarie, a guarantee we provide for our clients. Along with Brucellosis accreditation we test 350 ewes biannually for Ovine Johnes disease with a 100% negative result. We have also implemented a fully audited Biosecurity plan for all properties. As for all sheep veterinary advice, Greg McCann is available for all clients.

ANIMAL HUSBANDRY

Macquarie rams were shorn on 28th April 2022.

All rams on July 28, 2022 were;

- Vaccinated 6 in 1
- Drenched - Cydectin LA & Duocare

DELIVERY

Free ram delivery to most areas.

SEMEN/MARKETING RIGHTS

All rams are sold on the condition that Macquarie retains full semen marketing rights unless otherwise stated or an agreed arrangement is in place.

ASBVs

At Macquarie, we are great believers in ASBVs AS A GUIDE. No ram or ewe is selected on ASBVs. We fine tune with figures after they have been subjectively classed.

Foremost for James and for me is structure, soundness, make and shape, staple length, lock, wool character, style, lustre, handle and nourishment traits that aren't measured by ASBVs.

The Macquarie '*Type*' is recognised throughout the industry and attracts premiums through Auctions Plus, sale yards and processors. Our clients' results are testament to this.

It must also be mentioned that Macquarie has the highest number of Dohne animals in the Sheep Genetics database (as of Sept 21) - 21,019, 36.4% more than the stud with the second highest recorded animals (13,365).

DISCLAIMER All care is taken by the vendors in collecting the individual animal data presented in this catalogue, including parentage information. Macquarie Dohnes accept no responsibility for the accuracy nor the repeatability of the information supplied in this catalogue.

2022 SALE RAMS

This years sale rams are a tremendous draft of high quality genetics. These rams are late April - early August drop and are unhoused running on predominantly perennial grass pastures. As with our policy (except during drought) these rams have never received any grain or pellet in any form nor have they been run on irrigation.

This is the largest offering of Dohne rams at a single vendor at auction ever in Australia giving clients a large selection.

Sires from 4 families are represented in the sale offering clients a large genetic pool.

Average 2021 Drop ASBV Table

	Macquarie	Breed
PWT	4.8	4.5
PEMD	0.6	0.6
PFAT	0.1	0.1
YCFW	9	7.7
YFD	-0.2	-0.2
YDCV	-0.6	-0.6
Plus Index	153.2	149.4
Staple Length	3.5	2.3

Dam Average Adult Body Weight (Dam AWT)

A concern for the whole Australian sheep industry is adult body weight. There is an optimal ewe efficiency balance. This will vary from region to region, enterprise and management. We recognised early on that adult body weight needed to be addressed. All ewes at Macquarie are weighed pre joining and again at weaning. Over the last 10 years we have reduced the average adult ewe body weight by 9kg, without affecting early growth rates (average weaned lamb has increased by 6.6kg over 15 years) or wool cut.

We have decided to include the rams dam average adult body weight in this years catalogue. The average Dam Adult BW of our sale team is 65.5 kg.

STUD EWES, STUD SIRES and EMBRYOS AVAILABLE on REQUEST

www.dohnes.com.au

MACQUARIE SIRE SUMMARY

Empire Family

Characteristics are exceptional structure, length and depth of body carrying a long stapled, stylish, well crimped, bright and soft handling 64s quality fleece. Sires have sold to **\$13,000**.

Recent family success includes impact sire **MD13-7021** 'Tom'.

Sons include **MD15-1937** to Stephen & Dianne Perry for \$8000.

MD13-7021 and son, **MD15-1827**, semen sales include Stirling Stud (VIC), Koonik Stud (VIC), Mt Alma Stud (SA), Kardinia Stud (NSW), Far Valley Stud (WA), Kintail Park Stud (WA), Chirninimup Stud (WA) and also North America, Chile, Argentina and Uruguay. Grandson, **MD17-4684** was the NSW Champion Ram and a partner in the NSW Champion Pair which went on to become the National Reserve Grand Champion Pair at the 2019 Australian Sheep and Wool Show. **MD17-4684** was sold at the Victorian Dohne Ram Sale 2019 for a record price \$13,000, purchased by RW & EA McColl Meredith, VIC.

Great Grandson, **MD20-2864** was sold at the 2022 Australian Sheep and Wool Show for \$10,000 to Tom & Sophie Holt, Coonong Station Urana NSW.

Another Great Grandson, MD18-0230 has performed extremely well in the 2020 Balmoral Sire Evaluation.

9, 21 drop rams have been retained for stud use from this family.

John Nadin with NSW Champion Ram MD17-4684.

Majestic Family

One of our oldest and most prepotent families.

Characteristics are early maturing, deep wide bodies with deep wide twists while carrying a well-nourished 64s, long staple fleece.

Sires have sold for \$15000 – **MD04-1440** (Victorian record for a dohne) to Havelock Park and impact, **MD07-0583** sold to Chirniminup Stud, WA for \$6500, **MD07-0424** to Koonik Stud, Vic for \$6000, **MD08-8527** to Kardinia Stud for \$4500, **MD09-2424** to Havelock Park for \$7000, **MD10-3737** to Barnadown Dohne Stud for \$5200, and **MD12-5277** to Stephen and Dianne Perry for \$4400.

Majestic 14-1051 was the Supreme Dohne exhibit at the inaugural showing at the 2016 Australian Sheep and Wool Show and has progeny represented in this year's sale.

The first outside introduction into this family is from Kintail Park (WA) KP13-2345 purchased with Kardinia Stud.

Other notable sales include **MD15-1399** at the 2016 National Sale to Chile for \$5000 and **MD15-2447** at the 2016 On Property Sale to Hyland Stud (NSW) for \$4250.

Peter Nadin with the Supreme Exhibit Majestic 14-1051.

Olympus Family

Macquarie's oldest family.

Characteristics are long & deep bodies, deep twist & carrying a long stapled 66s quality fleece.

Sires have sold for \$20,000 - **MD03-0681** top priced ram and Australian record auction price at the 2004 National Sale to Calga Dohne Stud, **MD06-4492** to Havelock Park for \$12,200, 2008 National Dohne Ram Sale **MD04-1792** to Kardinia & Murragamba Dohne Studs for \$8000, 2006 National Dohne Ram Sale **MD07-0475** to Havelock Park for \$7000 at 2009 on Property Ram Sale **MD10-3595** to Midgery Dohne Stud for \$5500 at 2012 Premier Stud Sire Sale. 1, 21 drop ram has been retained for stud use from this family.

Greg McCann, Annie and David Berrell Midgery Dohne Stud and John Nadin with Olympus MD10-3595.

Wardry Family

This family is based on original Uardry genetics. The first Uardry sire purchased was **UD01-0281** in 2002 for \$12000.

Characteristics are long bodies carrying medium fleece on a thick supple skin.

Recent introductions include **TR14-7388** - Semen purchased from Chirninimup Stud WA. A large upstanding sire that has bred on well.

Grandson's are represented in this year's sale.

MD Wardry 16-2966 'JB' Reserve champion ram at the 2018 Australian Sheep and Wool Show. A 'fault free' ram with outstanding credentials and has been used extensively within the stud. **MD16-2966** was sold at the Victorian Dohne Ram Sale 2019 for \$5,000, purchased by West Wail Dohne Stud Pimpinio, VIC. 2966 has performed extremely well in the 2022 Coonong Sire Evaluation.

Sons include MD19-1457 who is performing exceptionally well in the 2021 Ballmoral Sire Evaluation.

6, 21 drop rams have been retained for stud use from this family.

Peter, Robyn and John Nadin with Reserve Champion MD16-2966.

Catalogue information

Identity: The sheep's identity detail indicates the Registered Flock (2 or 3 letter prefix), the year of drop (the first two characters), followed by the tag number (4 characters).

The sheep's sire and dam, birth date, and the number in the birth are listed after the sheep's identity. The sire and dam plus the birth details are taken into account when calculating each sheep's ASBVs and therefore Index.

Note: When a registered Dohne is purchased the seller, when requested, is required to give the buyer the sheep's Flock Book Certificate as proof of the Dohne QA and performance.

Final Grade: There are 4 Final Grades, R, C, UR and P. **A ram with an R grade is a high quality commercial flock or stud ram.** Sheep with a C (Cull), UR (Unregistered) or P (Pending) Grade cannot be sold for breeding.

Index: A sheep's Index is the combined value for measured traits in the Dohne Breeding Objective. An Index Value of 100 is the average performance of the year 2000 Drop Registered Dohne progeny. Numbers above 100 are higher performing on index. An index value of 151.8 for the Dohne Plus Index and above is at the higher end (top 50%) of the present drop (2021) – see the table on the following page.

Trait ASBVs: On the following page each individual ASBV trait is described. In general an ASBV describes the expected performance of a Dohne sheep's progeny. Each measured trait is reported as a Dohne ASBV (as a deviation from the average performance of all the sheep in the 2000 drop progeny. The average of the 2000 drop is described as 0.0 (zero).

As a commercial breeder how can I relate a ram's ASBV to my flock's performance?

1. Ask a local Dohne breeder how a Dohne flock will perform on your property.
2. Relative to this flock performance define your flock's breeding objective for each trait, e.g. increased post weaning bodyweight (PWT) relative to the general Dohne performance.
3. Select rams for the stated breeding objective, e.g., rams with an ASBV higher than average PWT, that is, ASBVs that have a positive value for PWT (greater than 0.0). The higher this value the higher the PWT or another way to consider this the greater the growth rate.

Your Benchmark – the Dohne standard (Percentile Band Table)

A guide to the performance of a registered Dohne relative to the Dohne breed standard is reported in the table of ASBVs/Index on the following page.

The table is an extract from the Dohne analysis on the 21th June 2022;

Band	MWWT (kg)	WWT (kg)	PWT (kg)	PEMD (mm)	PFat (mm)	YCFW (%)	YFD (µm)	YFDCV (%)	NLW (%)	Dohne Plus

In the table above W before the trait abbreviation indicates the Weaning age (6 up to 16 weeks of age);
P is Post-weaning age (7 up to 10 months of age); Y is Yearling age (10 up to 13 months of age).

Trait name, abbreviation and description

WT: Rams with a positive ASBV for **bodyweight** (WT) will produce lambs that grow faster and reach their target weights sooner. A ram that has a WT of 4.4 will generally breed progeny that are genetically 2.2kg heavier than those of a ram with a WT ASBV of 0.0 (zero).

EMD: Rams with a higher ASBV for **eye muscle depth** (EMD) will produce lambs that have a higher lean meat yield. A ram that has a EMD of 0.8 mm will breed progeny that genetically have a 0.4 mm deeper eye muscle area than a ram with an EMD ASBV of 0.0 (zero).

FAT: Rams with a lower **fat depth** (FAT) ASBV will produce lambs that are leaner at the same weight. A ram with a negative Fat ASBV means that his progeny are leaner than those sired by a ram with a positive Fat ASBV.

CFW: Rams with a higher ASBV for **clean fleece weight** (CFW) will produce progeny that cut more wool. A ram that has a CFW of 2.6% will breed progeny that genetically cut 1.3% more wool than progeny of a ram with a CFW ASBV of 0.0 (zero).

FD: Rams with a lower **fibre diameter** (FD) ASBVs are finer. A ram with an ASBV of -2.4 will breed progeny that are genetically -1.2 microns finer than those of a ram with a FD of 0.0.

FDCV: Rams with a lower ASBV for **fibre diameter coefficient of variation** (FDCV) will produce progeny that have less variation in FD in their fleece. A ram with an ASBV of -1.2% will generally breed progeny that are genetically -0.6% lower FDCV than those of a ram with a DCV ASBV of 0.0 (zero). A lower FDCV% is associated with higher staple strength.

Dohne index value: An index value is a summary of the sheep's performance for **measured** traits. A ram with a higher index value will breed progeny that have on average a large increase in meat production traits such as post weaning weight, muscle depth and reproduction, as well as a small increase in fat depth. In addition, fleece weight, fibre diameter and staple strength will be maintained.

Dohne Genetic Performance Information

The Dohne breeding system

Dohne ram breeders and commercial producers are obtaining a major improvement in the breeding progress and commercial returns from their flock by using the Dohne Genetic Performance system.

When Dohne Genetic Performance is combined with the Dohne Classers Grading system the breed has the most advanced across-flock sheep breed evaluation system.

Dohne Genetic Performance information is focused on maximizing \$dollar returns for commercial sheep producers while the Dohne Classers Grading system ensures conformation, quality and type standards are maintained. No other breed offers its members and their commercial clients the quality assurance and ability to make across- flock assessments. The system has been developed to maximize the standard and genetic improvement of all breeders' flocks.

Breeding progress could be as much as 50% greater if genetic performance records are used efficiently. Even larger gains are possible when breeders use the benefit that comes from all Registered Dohne ram breeding flocks being linked together thus allowing more accurate selections from the best genetics available.

When commercial meat and wool producers buy Dohne rams they have a guaranteed and easy to use genetic improvement service. **Dohne ram breeders are required to use and provide to clients their sale rams Genetic Performance and Classers Grade in a standard format.** Genetic Performance includes PWT, YCFW, YFD, and YFDCV.

Dohne genetic performance records – Australian Sheep Breeding Values (ASBV)

ASBV are calculated by “Sheep Genetics” and describe the expected performance of the progeny of a sheep, not just the performance of the sheep itself. An ASBV therefore describes the breeding value of the sheep – and as a breeder isn't that what you want to know?

Dohne ram breeders produce ASBVs for major measured performance traits, including the traits required to be recorded – weaning and post weaning weight, fleece weight, fibre diameter and CV of fibre diameter. Many breeders also record eye muscle, fat depth, reproduction and index.

Dohne ASBV performance is based on the measured evaluation made by the ram breeder. The measurement is then **value added** by accounting for factors that breeders recognize can improve the ability of measured information to describe a sheep's breeding value. Factors accounted for include the trait heritability, if the sheep was a twin or single, date of birth of the lamb, the sheep's pedigree (relative's) performance and difference in environment between groups.

Pedigree performance records allow all Dohne ASBVs to be reported across-years and across- flocks. The result is that the performance of all Dohnes from large and small, old and new, Registered Dohne ram breeding flocks can be directly compared.

Dohne ASBV describes the expected performance of the sheep's progeny for a trait relative to the performance of the sheep in all Registered Dohne ram breeding flocks.

Dohne Indexes – high growth, maintain fleece

A ram with a higher index value will breed progeny that have on average a large increase in meat production while at the same time maintaining fleece production.

Dohne index, “Dohne Plus” index (the same as the Dohne Index reported in previous years)
The following is a brief description of the Dohne Index.

The Dohne Index include the commercially important traits, both wool and meat. Meat traits have a high emphasis to further increase the rate of early age weight gain (PWT), while at the same time a moderate emphasis to increasing muscle depth (EMD), as well as small emphasis to increase fat depth (FAT). Wool traits, fleece weight (YCFW), fibre diameter (YFD) and staple strength (YSS) have the required emphasis to maintain their current production levels. **The Plus index includes a moderate emphasis on reproductive (NLW).**

Figure 1. The bar graphs below describe the relative economic emphasis on traits and the adjacent column describes a ram breeder’s trait gain after 10 years use of the index at 65% of overall selection emphasis.

More Information

Brett Wilson, Dohne Database, ph: 0411 541 034, email: data@dohne.com.au

Most up to date and accurate performance

It is the intention of this catalogue to present the most up to date and accurate performance ASBVs and index values to assist buyers in their choice of rams. To achieve this, the ASBVs and index values presented in this catalogue are taken from the most recent breed analysis that all sheep were included in. The ASBVs and index values presented may vary over time as a result of more performance information from the sheep and/or relatives being added into the Dohne analysis.

The Australian Dohne Breeders Association (who own and manage the database) and Sheep Genetics who conduct the analysis do not collect the information used in the analysis and therefore are not responsible for the ASBVs and index values reported

BUYERS INSTRUCTION SLIP

Purchaser's "Buyer's Instruction Slip" is to be filled in and handed to the Auctioneers desk before leaving the sale.
