## 2022 SUPER SUMMER MIX

**Our new refined multi-species seed designs that deliver:**

- + **Huge improvement to soil health**
- + **High performance live weight gains**
- + **Improved water efficiency**

Our multi-species mixes provide a great option in your pasture program, that is low risk with high production and profitable returns when grazing with livestock. For pasture systems we can design mixes that can prime the soil to set it up with better soil structure and performance of perennial species.

With fertiliser prices increasing, we have options to release phosphorus and increase nitrogen into the soil, with plants in our summer and winter mixes, while improving infiltration and water holding capacity, plus sequestering carbon. This can all be done while making money grazing with high performance live weight gains and nutrient cycling. Summer mixes across many farms up and down the east coast found greater dry matter production at a lower cost of production and an average of 21kgs per cow extra live weight gains than the next best option.

Plus with right conditions, and when managed well, has produced 15-20t/ha silage and large increases in soil organic matter. We only source the highest quality bare seed and can inoculate with worm juice and other microbes and minerals. This helps set the plants root systems up to enhance germination and quorum sensing between each species planted.

### SUMMER SUPER MIX SOUTHERN STATES

Forage sweet sorghum, Forage millet, Sunflowers, Buckwheat, Raddish, Mungbeans, Arrowleaf clover, Persian clover, Balansia clover, Safflower.  
Suggested sowing rates 15-20kg/ha.

### SUMMER SUPER MIX NORTHERN STATES

Forage sweet sorghum, Forage millet, Sunflowers, Buckwheat, Turnip, Mungbeans, Cowpeas, Safflower.  
Suggested sowing rates 15-20kg/ha.

### DAIRY SUMMER MIX

Forage sweet sorghum, Forage millet, Cowpeas, Fenugreek, LabLab, Sunflowers, Mustard, Forage rape, Turnip, Buckwheat.  
Suggested sowing rates ~25-30kg/ha.

### SUMMER STARTER MIX

Forage sweet sorghum, Forage millet, Sunflowers, Buckwheat.  
Suggested sowing rates ~10-15kg/ha.

### POLLINATOR MIX

Persian Clover, Arrowleaf Clover, Balansia Clover, Crimson Clover, Hairy Vetch, Woolly Pod Vetch, Safflower, Radish, Peas, Lentils, Phacelia, Oats, Sunflower, Black Mustard, Yellow Mustard.  
Suggested sowing rates 25 - 30kg/ha.

# WELCOME

...to our 18th Annual on Property Sale, offering black Angus and black Stabilizer yearling bulls. We are excited to present this year's group of bulls that will amplify your herd with their multi trait excellence.

Our main breeding objective is to keep all traits in balance, to breed cattle that are born easy, grow faster, rebreed in short gestation, strong on carcass specs, moderate mature cow size, with sound structure and are quiet to handle. Our cow herd is run under commercial conditions with no supplementary feed, using natural selection principles where animals must not only survive but thrive. Culling criteria includes fertility (6 week joining), structure assessment, and docility which over generations has developed genetics that are resilient and sustainable. To ensure predictability of performance all bulls are DNA tested with genomic enhanced EBVs and \$Profit EPDs. All of this means a nice line up of bulls to offer! They are a consistent line with balance, high ranking credentials on global \$Profit and TACE Breedplan, and look good in the paddock.

Back again in 2022 are the Sydgen Bonus 8084 sired cattle, in both Angus and Stabilizer form, and are a real highlight with their multi trait excellence and uniformity. We have just finished calving down our first Round AI over Bonus heifers who all calved unassisted, with a high percentage calved already. They are super docile with beautiful udders; simply magnificent females.

There are many highlights in the sale offering with royal pedigrees, including top bulls descended from Paringa Judd J5's dam F30. A feature is Lot 5 Paringa Bonus S92 who's grand dam is Bartel E7's full sister. Some great Angus pedigree combinations with Bonus, Nobleman, Hometown, Justified, Paycheck P22 and Alpine Junior Q45 from our Dusty, Bartel, No Regrets female lines. Have produced very balanced bulls for all markets and environments.

The same can be said about these Stabilizer bulls, the strength in these reflect the strength of the maternal Paringa base and breed combination advantages of heterosis. With the added advantage of elite Angus bulls used. A sensational group of elite multi breed bulls with consistency and style backed by globally assured data.

The Angus bulls have more traits observed and data collected which did not make it to the TACE run for the catalogue, so we encourage you to look them up via links in the AuctionsPlus catalogue or Angus online catalogue closer to sale day. Or contact us and we can send the updated EBVs through.

As a bull business we are grateful for the sounding board and shared genetics with Leachman USA and Rissington NZ, for without their expertise and relationships we would not have had the opportunity to import sires like Bonus, Accelerate and Paycheck and keep ahead of the curve. Thanks to those who have contributed to getting to sale day, too many names and businesses to mention, but you know who you are! Keep up to date with latest biosecurity - if you have returned from Bali / Indonesia in the week prior to 22nd September we would kindly ask you to use the AuctionsPlus online option rather than attend the sale in person.

Keep an eye out for photos and videos of the sale bulls - they will be available to view early September on AuctionsPlus and the Paringa website. However we highly recommend personal inspection of these bulls prior to the sale, they are looking a treat. You are welcome to inspect the bulls at any time by appointment, just give us a call.

As always reach out if you have any questions,

All the best,

*Tom & Olivia*

Tom & Olivia.

# SALE DAY INFORMATION

## SALE DATE AND PRIOR INSPECTION

Selling will commence at 1 pm on Thursday 22<sup>nd</sup> September, 2022. Bulls may be inspected from 10am on the morning of the sale, or at another time by prior arrangement with the agents or vendors. The sale will be conducted on property and interfaced with AuctionsPlus.

We have current COVID safe plan in place. Please do not attend in person if you have COVID symptoms, or are waiting for a test result.

## SELLING SYSTEM

Sale of animals will be conducted under Open Cry Auction terms and conditions, and interfaced sequentially online with AuctionsPlus. Please ensure to register with the selling agents and/or AuctionsPlus to obtain a buyers number if you are considering making a purchase. Successful purchasers are requested to give written advice to the selling agents regarding transport arrangements at the conclusion of the sale.

Note this will be sale by video auction - sequentially sold from lot 1 onwards. All lots will have photos and/or video uploaded to AuctionsPlus mid September. Please register your trading details with AuctionsPlus prior to sale day.

## DELIVERY

Delivery can be organised by the vendor or the purchaser but please advise the selling agents of your requirements on sale day on the buyer sheet including full contact details. Delivery is at the cost of the purchaser. Please note: no transport is permitted during the auction.

## GST

All animals are sold exclusive of GST.

## INSURANCE

All due care is taken in the delivery of animals purchased however buyers are responsible for the insurance of animals against injury or death from the fall of the hammer. Insurance is available on the day or arrangements can be made prior to the sale. We strongly recommend taking out insurance on bulls for the first 12 months and especially during joining.

## SALE DAY SAFETY

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances. However, there are inherent risks associated with cattle handling.

## PAYMENT OPTIONS

Settling of accounts will be facilitated by the selling agents. Payment options are Agent Settlement or Direct Settlement with payment on the day by Direct Deposit (EFT), Cheque &/ or Credit Card (1.5% surcharge applies).

## REBATE

A 3% rebate is offered to all Livestock Agents who are in

## PLEASE NOTE

OUR CATTLE ARE NATURALLY QUIET, HOWEVER VISITORS ENTER THE CATTLE PENS AT THEIR OWN RISK. FOR THEIR OWN SAFETY CHILDREN MUST NOT ENTER THE PENS AND YARDS AT ANY TIME.

attendance at the sale, or introduce their client(s) in writing by email to [livestock.gtsm.nsw@raywhite.com](mailto:livestock.gtsm.nsw@raywhite.com) at least 24 HOURS PRIOR to sale start time and settle within 7 days of sale. A 2% rebate is offered to all Livestock Agents who are not in attendance and introduced via email within 24 hours of the sale & settle within 7 days of sale.

## BREED SOCIETY TRANSFERS

For stud ownership, the transfer of ownership of the animals at Angus Australia will be organised by the vendors if requested. Please ensure accurate herd prefix, and transferee details are supplied on the buyer registration form. There is no obligation for commercial buyers to transfer animals.

## PARINGA BULL GUARANTEE

All breeding cattle bred by Paringa are fertile and structurally sound to the best of our knowledge.

If an issue arises with a bull within 12 months of purchase Paringa are willing to discuss options for a refund or replacement on a case by case basis based on fertility and structure. Important to make contact with us directly in the first instance. This is not an insurance policy - we recommend each purchaser takes out their own bull insurance and to avoid single sire mating their yearling bull. To be eligible for the guarantee the purchaser must lodge an application to Paringa in writing within 12 months of date of purchase, provide a full veterinary report, photos and in some cases inspection by the vendor.

This guarantee is additional to the normal terms and conditions governing auction sales, and as such the vendors decision will be final. Paringa Livestock Pty Ltd reserves the right to refuse a guarantee in some cases. Please note, Paringa Livestock Pty Ltd is not liable for genetic defects, either current or future.

## INDEPENDENTLY ASSESSED

Sale bulls have been structurally assessed by Jim Green on 11th August 2022. No foot trimming has been performed on any animal.

## FERTILITY TESTED

Bulls are fertility and semen checked prior to sale day by Nationwide Artificial Breeding Services.

## HEALTH TREATMENTS

Bulls have received 7 in 1 booster, oral drench + flukeicide, Pestigard booster, mineral lick

# AUSTRALIA'S \$PROFIT INDEX

## WHY \$PROFIT

Today, ranchers have to make proper genetic decisions to improve profitability and the return on their investment. However, most seedstock providers confuse potential customers with too many EPDs. Most Angus have over 25 EPDs, plus DNA rankings are also often provided. While this data is useful, it is also very hard to analyze. This makes buying the best bull very difficult. Every bull is good on some traits and weak on others. The challenge is figuring out how each of those traits is going to impact your bottom line. Buyers try to determine which bull will make the most money from birth to slaughter, but most of the time, they end up guessing.

When Boeing Airlines starts to build a plane, do you think they guess how it is going to fly? How much fuel it is going to use? How many pounds of cargo it can carry? No, they don't guess – instead they use their knowledge to build a computer program that simulates the outcomes based on the design of the plane that they have in mind. This same simulation technology can be used in beef cattle to improve selection decisions

## HOW \$PROFIT WORKS

\$Profit is based on results from an advanced simulation model, developed by Dr. Steve Miller (now the Director of Genetic Research at the American Angus Association) in conjunction with other geneticists at Guelph University. The simulation develops partial budgets that look at how a genetic factor influences cost and/or revenue. The model factors in all of the effects on both income and expense to come up with a net profit figure for each bull.

\$Profit assumes that the average commercial bull will have 100 progeny over its lifetime. The model assumes that you keep 30% of your heifers as replacements and that you retain ownership on the remainder of the calves through harvest. Further, it assumes that you will sell on a grid with premiums for quality grade and yield grade.

Most importantly, \$Profit allows you to easily compare any two bulls and calculate the difference in profit that they are expected to generate in your herd. Let's compare a \$14,000 \$Profit bull to \$10,000 \$Profit bull. The predicted difference between the bulls is \$4,000 or about \$40 per calf. For comparison, the average 2015 Angus bull has a \$Profit of approximately \$9,000.

## WHAT TRAITS ARE INCLUDED IN \$PROFIT

\$Profit includes nearly every trait that impacts profitability. The effect of most traits on profit is fairly simple to understand. Here is the list of what is included and its effect:

### REVENUE TRAITS

**Calving ease** = more calves means more revenue.

**Weaning & Yearling EPD** = more weight equals more revenue.

**Fertility (days to conception)** = more weight and more calves

**Carcass weight** = worth more up to 477 kg.

**Marbling** = valued based on grid premiums

**Ribeye area** = value as impacts yield grade

**% Retail Product** = more yield is more saleable meat

### COST TRAITS

**Cow mature size** = bigger eats & costs more

**Cow intake** = more intake eats & costs more

**Feedlot feed efficiency** = more feed per kg of gain means more cost

Some traits are not so easily characterized for \$Profit. Milk, for example, is a good thing until you get too much. When over +25, milk EPD has a more negative effect on fertility than it has a positive effect on weaning weight. There are a few traits not yet included in \$Profit: longevity, structure, and disposition. These traits are important but difficult to express in dollars.

## FEED EFFICIENCY EPDS EXPLAINED

**Feed:Gain:** Difference in the amount of feed a bull's progeny will consume to produce one pound of gain.

**Example:** A -0.50 F:G EPD means this animal's progeny will consume 1/2 pound less feed per pound of gain than would progeny of a zero F:G EPD sire.

**Feed Intake:** Difference in feed consumption of each of a bull's progeny in a 112 day feeding period.

**Example:** A steer whose sire has a -100 Intake EPD will eat one hundred pounds less feed in 112 days than one whose sire had a zero Intake EPD.

## EPD DEFINITIONS

Genetic prediction values from the \$Profit Share program are generated on an across breed basis. This means that all animals can be compared regardless of their breed or breed mix. Further, when applicable, all EPD values are directly comparable to their equivalent in the American Angus Association. Definitions for the values on each trait follows:

**Birth weight EPD** is expressed with a base equivalent to that of the American Angus Association.

**Weaning weight EPD** is expressed on an American Angus Association scale.

**Yearling EPD** is expressed on an American Angus Association scale.

**Milk EPD** is expressed on an American Angus Association scale. This is the best predictor of a bull's daughter's ability to milk. It measures the difference in weaning weight that will be produced between one bull's daughters and another bull's daughters due solely to milk.

**IMF** is the ultrasound based EPD and is expressed on an American Angus Association scale.

**REA** is the ultrasound based EPD for ribeye area and is expressed on an American Angus Association scale.

**MWT** is the predicted mature weight of daughters from your bull.

A bull with a MWT of +0 should produce 1250 pound cows under most conditions. From this, simply add the MWT EPD to 1250 to get a good prediction of what a particular bull's daughters will weigh. If your conditions are better, then you will experience heavier weights than those predicted. This EPD is the best indicator of daughter size – far better than frame score or yearling height.

**FG** is the pedigree estimated feed to gain EPD that predicts the feedlot efficiency of the bulls offspring. A negative number means that the bull's progeny will use less feed to gain a pound of live weight. Example: -0.50 means that the bulls progeny will require 1/2 pound less dry matter feed per pound of gain.

**Intake:** is an estimate of the amount of feed that the bull's progeny will consume over a 112 day feeding period. Animals with higher intake will consume more throughout their life. Animals with lower intake will consume less. This is the best prediction of the feed needs for a bull's steer offspring and for the feed needs of daughters.

**YHT** is an EPD predicting a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

**SC** is an EPD expressed in centimeters, predicting the difference in transmitting ability of scrotal size compared to that of other sires.

**\$Ranch EPD:** This Leachman profit index predicts weaning profitability based on calving ease, weaning weight, maternal milk, cow cost, and FERTILITY. It is based on producing 100 calves. Selection for this index will increase profit per acre and decrease cow size.

**\$Feeder:** This number is expressed in terms of the bull's added value to the sale price of your feeder calves. It is expressed in dollars per head. Thus when comparing a +100 bull vs. a +50 bull, we expect the first bull to sire calves worth \$50 per head more at weaning (regardless of their weight).

**\$Profit™ EPD:** One, simple, proven number that gives each trait a weight according to its impact on profit. This takes into account fertility, growth, feed intake, and carcass merit. This index is the fastest method to improve the overall profitability of a herd of beef cattle.

*"On the Ranch, In the Feedlot, & On the Rail, \$Profit™ simply works!" ~ Lee Leachman*

## UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

<b>Calving Ease</b>	<b>CEDir</b>	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	<b>CEDtrs</b>	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	<b>GL</b>	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	<b>BW</b>	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
<b>Growth</b>	<b>200 Day</b>	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	<b>400 Day</b>	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	<b>600 Day</b>	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	<b>MCW</b>	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	<b>Milk</b>	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
<b>Fertility</b>	<b>DtC</b>	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	<b>SS</b>	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
<b>Carcase</b>	<b>CWT</b>	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
	<b>EMA</b>	cm <sup>2</sup>	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	<b>Rib Fat</b>	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
	<b>P8 Fat</b>	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	<b>RBV</b>	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
	<b>IMF</b>	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
<b>Feed/Temp.</b>	<b>NFI-F</b>	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	<b>Doc</b>	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
<b>Structure</b>	<b>Foot Angle</b>	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	<b>Claw Set</b>	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
<b>Selection Index</b>	<b>\$A</b>	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	<b>\$A-L</b>	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.  The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low.  While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

# THREE EASY OPTIONS TO SELL YOUR CATTLE TO GREENHAM

## 1. OVER-THE-HOOKS: SELL DIRECTLY TO PLANT

Sending your cattle direct to your local Greenham processing facility is the best option to get the most out of your high-value program cattle.

## 2. LIVEWEIGHT BUYING CENTRES

Bypass the hassle and high costs of saleyards and get paid quick. Sell your cattle at one of our 14 conveniently located liveweight buying centres across Victoria & South Australia.

Contact your local Greenham cattle buyer to discuss your options or sell cattle today.

**1300 548 378**

[www.greenham.com.au](http://www.greenham.com.au)

## 3. LIVEWEIGHT AGISTMENT PROGRAM

Convert your surplus pasture into cash with the Greenham liveweight agistment program.

entry weights of 250-450kg liveweight, and preferred turn-off weights of 450-650kg liveweight.

all animal health costs covered by Greenham.

payment is based on liveweight gain and market prices at contract execution.

must be LPA, MSA and NE accredited.

grass and grainfed options available.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA

SV : the sire has been verified by DNA

DV : the dam has been verified by DNA

# : DNA verification has not been conducted

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

**Traits Observed:** 200WT(x2),DOC,Genomics

**Notes:** What a way to kick off the catalogue of 60+ yearling bulls. Paringa S93 is an impressive Bonus son with a royal pedigree and tremendously balanced set of EBVs. His dam is one of our favourites and traces back to KO Vickery embryos we were lucky enough to secure some years back. A terrific, quiet young bull from an outstanding 2 year old Texas No Regrets X Bartel heifer. Sydgen Bonus sons sold through the roof at Texas Angus recent sale. Top 1% BW, top 2% CED & DOC, top 3% EMA.

Notes: These Nobleman's are the type of cattle that excel in high stocking rate, intensive management systems, or up in arid central Australia. Daughters have the right profile to survive and rear calves each year. Paringa Nobleman S116 is a well balanced bull from a really good Keystone 2 year old, rich in Landfall/Rennylea/Twynam genetics. Top 5% CE, top 1% GL, top 8% DC, top 3% RIB, top 18% 200D, top 4% Indexes.

**Traits Observed:** 200WT(x2),DOC,Genomics

**Notes:** Paringa Bonus S91 may just be the most complete young bull in the sale. An outstanding bull from a beautiful Texas No Regrets daughter. Grand sire No Regrets has proven himself to sire highly productive females, quiet, sound, easy calving, picture perfect udders, and get back in calf. They complement our Judd and Bartel lines and now super sire Sydgen Bonus. Top 1% DOC, top 3% CE & BW, top 6% EMA & top 9% IMF.

Notes: Is this the sleeper of the sale? Not many bulls push the correlated traits like Paringa Bonus S125. He is listed in the catalogue further down from his brothers only because of the way we split them after weaning due to mating groups. His dam is a tank, a bit like him! Top 1% DOC & EMA, top 3% RBY, top 4% IMF, top 6% CWT, top 10% BW, top 11% CE, top 14% 600D.

Traits Observed: 200WT(x2),DOC,Genomics

Notes: At the risk of sounding like I am repeating myself, this bull is also in my top few favourites; a seriously good bull. When you consider that Alpine Junior was used as a back up sire after AI, these Junior sons are 6 weeks younger so have to stand out to make the first cut for the sale group. It is no wonder with his GAR Sunrise/Paringa Judd F30 cow line yet again. Paringa Junior S130 is an exceptional bull. Top 2% CWT, top 5% RBY & NFI. Keep a close eye on his EBVs closer to sale day as more data is analysed.

 PARINGA STABILIZER JC16

Lot 37 S658 is a super quiet, good footed bull with that extra yield and muscle that you would expect from a Stabilizer. His dam is an impressive Paringa Stabilizer female who never misses a beat. As you have seen in the pure bred Angus bulls, sire Knowla Nobleman N127 has also been a good blend here, with a bit of hybrid vigour added. Top 5% YW, top 0.1% marbling, top 1% \$Profit Index. HEIFER SUITABLE

# BRINGING YOUR NEW BULL HOME

WHEN PURCHASING A BULL, CARE AND HANDLING AFTER THE SALE CAN BE AS IMPORTANT AS THE PURCHASE ITSELF.  
LOOKING AFTER YOUR BULL WELL DURING THE INITIAL STAGES OF HIS WORKING LIFE MAY ENSURE LONGEVITY  
AND SUCCESS WITHIN YOUR BREEDING HERD.

## PURCHASE

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament shown in the ring.

## DELIVERY

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering. After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed. Treat bulls kindly your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

## IF YOU USE A PROFESSIONAL CARRIER:

- Make sure the carrier knows which bulls can be mixed together.

- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

## ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning .

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.

**AFTER PURCHASE TIPS**

**ARRIVAL**

**MATING NEW YOUNG BULLS**

**MANAGING OLDER HERD BULL**

**DURING MATING**

**NORTHERN AUSTRALIA**

# BRINGING YOUR NEW BULL HOME

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later. Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

## MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

## MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

## DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

## NORTHERN AUSTRALIA

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

## ADAPTATION

The key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

## PURCHASE IN COOLER MONTHS

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

## CHANGE OF FEED SOURCE

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

## MANAGING CATTLE TICKS

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.

## What Our Clients Are Saying

"Many of my key clients use products and services from McKenzie Ag Services. The results have been excellent and the service cannot be faulted."

**Mick Curtis - Rodwells**

"Because our business requirements are a bit different from many producing breeding stock rather than fattening stock, getting the feed ration right is vital to ensure the guaranteed longevity of our stock to customers, whilst meeting weight gain targets. The reason we like using McKenzie feeds is their hands on approach, tailoring the mix to suit our operation, and ensuring the ration is balanced whilst minimising the need for rumen modifiers."

**Tom Lawson**

"In addition to supplying my feed and formulating my rations, I rely on McKenzie Ag Services for advice on many aspects of my feedlot business. Their combined knowledge of the grains industry and intensive livestock production is hard to come by, and has been instrumental to the success of my feedlot operations."

**Simon O'Donnell - Beef Producer**

"McKenzie Ag are a critical component of our operations at Yambinya Station. Their assistance with ration formulation, feed budgeting, grain and fodder inventory control and supply contracts are critical to our business. We rely on McKenzie Ag to provide the most appropriate rations for our Beef and Lamb Feedlots at Yambinya Station, as well as assisting many of our Farm Assurance and Great Southern producers. McKenzie Ag comes with my highest recommendation."

**Steve Chapman - Southern Livestock Manager, JBS**
