

RIDGEHAVEN

POLL DORSETS

ANNUAL RAM SALE

1pm Thursday 8th September 2022
On property, Cudal NSW

Ridgehaven Poll Dorsets is a family owned business based in the central west of NSW. We run 1000 breeding ewes and sell stud and flock rams across the eastern states of Australia.

As a result of a balanced approach to selection and performance evaluation, our sheep achieve commercially important benchmarks such as early growth, shapely muscle patterns and high carcass yields.

We measure our success by the results seen by our clients in the saleyards and abattoirs. Top prices, high carcass yields and the first of the new season lambs reflect the commercial attributes we strive to attain.

Founded in 1965 by Ron and Jessie Legge, Ridgehaven is a second generation stud run by daughters Ruth and Isabele, and son Floyd.

Ridgehaven Poll Dorsets started breeding rams with the aim to improve prime lamb quality. This still remains our focus - that is, to breed rams for maximum prime lamb return.

Our continuing focus is to develop carcass shape and to build on current growth rates, whilst maintaining structure and breed type.

We value feedback enormously and source producer and abattoir analysis to ensure our breeding program delivers what prime lamb producers demand. Any feedback (positive and negative) is welcomed, and assists us in making better breeding decisions.

We trust that you will find rams to meet your production requirements and enjoy the benefit of using Ridgehaven Poll Dorset rams.

OBJECTIVE MEASUREMENT REPORTING

How do the figures assist in ram selection?

Objective measurements give you the ability to see what you can't see visually. The area that is measured is the eye muscle—width and depth of the meat = EMA (eye muscle area), depth of the fat coverage and the overall weight of the sheep.

There are two systems of objective measurement, and each reports in a different way.

Stockscan provide you with the ACTUAL measurements—the size of the meat in the loin chop, the weight of the animal, and the ratio of the two relative to each other.

Lambplan provide you with ASBVs (Australian Sheep Breeding Values) which analyse the measurement of the eye muscle, fat and weight of the animal, and, in conjunction with blood relative information, find an estimated breeding value for each ram.

Both systems are useful in their own right, and together will improve the ram buyers ability to purchase appropriate rams.

BETTER RAM SELECTION

All this information can be confusing if it is not used effectively. The following questions may assist you in finding the right ram for your flock.

- Q. What are your target markets for your lambs?**
- Q. What breed type, size and age of ewe are you looking to join?**
- Q. Are there any environmental factors that need to be taken into consideration?** eg, barley grass in spring-lambs need to have a clean open head.

With your answers in mind, it is important to both consider the visual assessment of the ram as well as the objective measurement figures.

If you need assistance with your ram selections, we are happy to help at any time.

Ridgehaven rams are bred to produce lambs from suckers to export. Their fast growth and easy doing nature, give prime lamb producers options at market time.

REGISTRATION OF STUD RAMS

Lots 1-22 are nominated by Ridgehaven as potential stud sires and are eligible for APDA registration and transfer.

If you are interested in purchasing any other ram to be used as a stud sire, please speak to Isabele prior to the sale for registration approval.

Base price for a registered stud ram is \$2,500.

Performance testing gives ram buyers the opportunity to see just how well muscled a particular animal is and just how fat that animal is.

What is measured?

- Width of the eye muscle (A)
- Depth of the eye muscle (B)
- Depth of fat between the eye muscle and the skin (C)

A cross-section of a sheep carcass at the 12th rib and a schematic drawing showing the location of the various ultrasonic measurements:

What do the figures mean?

	LW (kg)	WIDTH	DEPTH	FAT	EMA
RAM A	108.5	93	41	7	29.36
RAM B	107.0	85	40	6	26.18

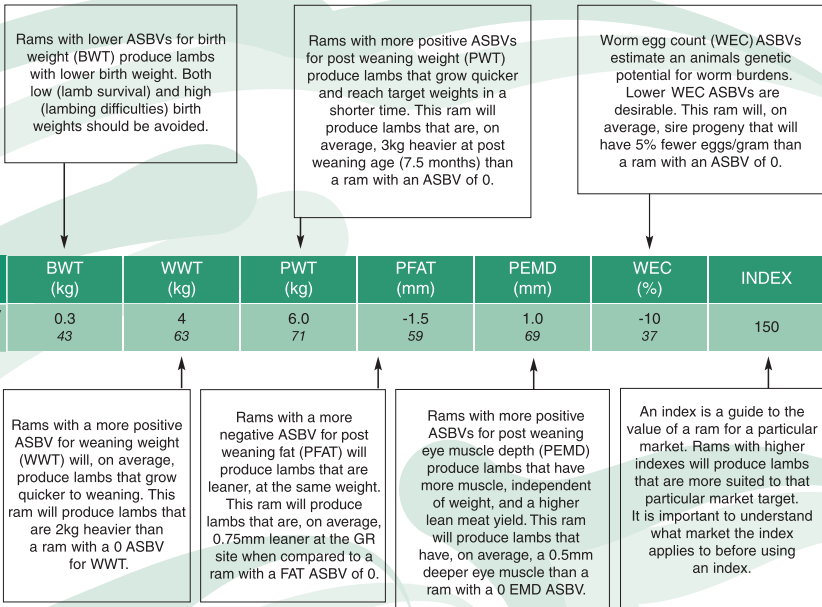

EMA = eye muscle area

Actual area of the eye muscle is calculated by using width and depth figures – the larger the better. ***THIS IS THE MEAT ON YOUR CHOP.***

The EMA should be considered in conjunction to the live weight of the animal.

Understanding LAMBPLAN ASBVs

- An ASBV of 0 is the average of the 1990 drop. It is important to compare ASBVs against current industry average.
- Note: A useful rule of thumb for converting ram ASBVs into lamb production differences is to simply halve the ASBV (as rams contribute half the genetics of the lamb).
- Accuracy - published as a percentage, is a reflection of the amount of effective information that is available to calculate the ASBV. All ASBVs are now published with accuracies. The higher the percentage, the closer the ASBV is to the true breeding value of the animal. Breeding values without accuracies are Flock Breeding Values (FBVs) and can only be compared within the flock.
