

WINYAR

MERINO &
POLL MERINO STUD

2022

Wednesday 7th September
Inspections at 10.00am
Sale Commencing 1.00pm

• Belubula Way, Canowindra NSW •

Offering: HORN RAMS JUNE / JULY DROP 2021

*The Dawson Family would like to welcome
you to their 2022 Ram Sale*

Enquiries

Studmaster: Allan Dawson

02 6344 1653

0427 441 653

E: winyar@bigpond.com

Nutrien

Livestock

Studstock:

Billy Gilbert 0407 440 563

Rick Power 0437 131 925

Dale Bowers 0437 525 381

*The Sale Team are looking good considering they have
come through an exceptionally wet winter.*

The rams are well developed with well-nourished wool.

Inspections

From 10.00am on Sale day
Sale Commences 1.00pm

Directions

Winyar is located 7km from Canowindra on the
Belubula Way (Mandurama Road).
Watch for signs and flags.

Rebate

2% to outside agents settling within 7 days of sale.

Raw wool data taken at 12 months of age

Carcass data taken at 10months of age

Merino select ASBVs and indexes current as 7th July

Disclaimer

*Measurements provided to be used as a guide only.
The vendor and their agents accept no responsibility for the
accuracy nor the repeatability of the results.*

EXPLANATION OF TERMS

RAW WOOL DATA

From samples taken on 30th June.

Micron

The mean fibre diameter of all the fibres measured, taken from a midside sample. This is generally the accepted region for sampling individual animals.

SD

The standard deviation of the fibre diameter. The lower the SD the more desirable, as there is less variation in fibre diameter around the mean.

CV%

The coefficient of variation of fibre diameter. This is expressed as a percentage of the standard deviation and mean fibre diameter. The lower the CV% the better, figures less than 20% are desirable.

CARCASE ASBVs

Generated from body weight and carcass scan data collected on 21st June.

Australian Sheep Breeding Values (ASBVs) are an estimate of an animal's true breeding value based on pedigree and performance recorded information. They are essentially a projection of how that animal's progeny will perform for a range of traits. ASBVs are expressed as either positive or negative deviations from an average. In the MerinoSelect database, an ASBV of 0 is the average of the 1990 drop.

YWT

Yearling weight, expressed in kg. Rams with a more positive ASBV for YWT will produce lambs that grow quicker and reach target weights in a shorter time.

YFAT

Yearling fat, measured in mm at the GR site via ultrasound scanning. Rams with a more negative ASBV for YFAT will produce lambs that are leaner, at the same weight.

MERINOSELECT INDEXES

Current as of MerinoSelect run on 7th July.

An index is a guide to the value of a ram for a particular market. Rams with higher indexes will produce lambs that are more suited to that particular market target. It is important to understand what market the index applies to before using an index.

YEMD

Yearling eye muscle depth, measured in mm at the GR site via ultrasound scanning. Rams with a more positive ASBV for YEMD will produce lambs that have more muscle, independent of weight, and a higher lean meat yield.

EMD is an actual measure for eye muscle depth. It has the relevance to the merino industry for kg of meat doing ability, constitution and fecundity. It is part of the M.P and D.P index .

These figures were taken at 10 months average age. The higher the EMD figure to bodyweight equals higher dressing percentage in carcass.

Merino Production +

The MP+ index ranks animals on their ability to produce progeny for a fine wool operation that has significant surplus sheep sales. The index is aimed at those producers whose sheep income is a balance of both wool and surplus sheep sales. It is for self-replacing Merino flocks who do not keep their wethers to produce wool.

Dual Purpose +

The DP+ index ranks animals on their ability to produce Merinos for a dual purpose operation. This index is aimed at those producers whose majority of sheep income comes from sheep sales. It is for self-replacing Merino flocks that do not keep their wethers and also join a portion of their ewes to terminal sires for lamb production.

After 10 years of using either the FP+, MP+ or DP+ indexes, you would be likely to get the following gains in production:

Trait	FP+	MP+	DP+
Fleece weight	+2.0 %	+5.1 %	+3.0 %
Fibre diameter	-0.7 um	-0.3 um	0 um
Body weight	+0.2 kg	+1.4 kg	+2.3 kg
Staple strength	+1.2 N/ktex	+1.4 N/ktex	+0.5 N/ktex
Eye muscle depth			+0.5 mm
Worm egg count	-9 %		
Number lambs weaned	+1.5 %	+2.4 %	+4.5 %

COMMENTS

Measurements are influenced by the age of the sheep, the site from which the sample is taken, and the length of wool (wool growth) and nutrition.

We recommend that when selecting your rams you take these factors into consideration and combine this information with a balanced 'hands-on' approach.
