

Yanco White Suffolks

Seventh Annual Performance Ram Sale

11:00am EST Wednesday 21st September 2022

On-Farm Helmsman Auction interfaced with Auctions Plus

75

**WHITE SUFFOLK
PERFORMANCE RAMS**

YANCO AGRICULTURAL HIGH SCHOOL

259 Euroley Road, Yanco, 2703

YAHS staff marking 2021 lambs in COVID lockdown

Year 10 Animal Management muscle and fat scanning lambs

Year 9 Agriculture weighing ewes

Year 10 Animal Management pregnancy scanning ewes

Year 10 Animal Management speaking with consultant about pasture assessment and worm control

Year 11 Agriculture programming ewes for AI

YANCO SHEEP STUDS

SEVENTH ANNUAL

PERFORMANCE RAM SALE (Est. 2003, Flock No. 524)

75 WHITE SUFFOLK RAMS

Held on-site, interfaced with Auctions Plus

Yanco Agricultural High School

259 Euroley Road, Yanco, 2703

Wednesday 21st September 2022
11:00 am EST

Inspection prior to sale by appointment only during
the week prior to the sale

Web site: <http://www.yancoag-h.schools.nsw.edu.au/agriculture-and-equine/yanco-white-suffolk-stud>

Contact: Ellie Quinn
0429317738

Please call Ellie on her mobile to book an inspection time with at least 2 business days notice

Sale Information

PRE – SALE INSPECTIONS:

Please contact Ellie Quinn on 0429317738 to schedule an inspection.

RAM HEALTH:

Yanco's White Suffolk Stud (Flock No. 0542) is an:

Accredited Ovine Brucellosis Free (Cert. No. Y478) Expiry: 30/04/2023
Accredited Ovine Johne's Disease MN3V (NS13071) Expiry: 30/04/2023

A vendor declaration will be supplied for:	Footrot Status
	Lice
Booster vaccination:	23rd August 2022
Shorn:	July 2022
Veterinarian Checked:	
Full Ram Breeding Soundness Assessment performed by Colac Veterinary Services on 1 st August 2022	

LOT ORDER:

All rams are lotted in birth order only. Lots 1 to 67 are Grade 1 Rams (suitable for mating at a ratio of 1:100), Lots 68 to 75 are Grade 2 Rams (suitable for mating at a ratio of 1:50).

NOTE:

Lambplan Data reported is from the 15th August 2022 run and raw weights are from the 29th August 2022. Please access the Ramselect webpage, Sheep Genetics catalogue and AuctionsPlus for the most up-to-date figures.

DELIVERY:

Free delivery will be offered to purchasers who live within 300km of the School. Alternatively, pickup of rams can be organised by appointment by contacting Stud Manager, Ellie Quinn on 0429317738 or Farm Foreman, Bianca Smith on 0427498788.

AGENTS:

Elders Narrandera - Dominic O'Mahoney
137/149 Audley Street, Narrandera

Mobile: 0427 931 533

Welcome to Yanco's Seventh Annual Ram Sale 2022

Welcome to the Seventh Annual Yanco White Suffolk Performance Ram Sale.

Highlights of 2021 and 2022 include:

- In September 2021, Year 10 Animal Management hosted our sixth ram sale, for the first time with AuctionsPlus, clearing a total of 45 rams at an average of \$1850 and a top of \$6100.
- Students in Year 10 Animal Management in 2022 assisted in selecting the sires for use in the 2022 AI program and continued this by assisting in implementing the AI program.
- The AI program continued to be a success with a 75% conception rate to the AI, and an overall pregnancy scanning rate of 170%

Yanco has on offer rams by leading White Suffolk Lambplan performance sires from across Australia. These include; SuperWhites Young Sires Ella Matta 190030, Langley Heights 190090, Farrer 190111, Gemini 190450, industry leading sires Woolumbool 173980, Poll Dorset industry leading sire Linton 160625, all used in the AI program.

Several of our own rams from the 2020 artificial insemination program, Yanco 200156 (top price ram in 2021 sale at \$6100), Yanco 200070 and Yanco 200129 have bred on very well, with some excellent progeny in the sale demonstrating outstanding figures.

Finally, thank you to the 2022 Year 10 Animal Management students who have been actively involved in the direction and management of the stud. Their contributions include; sire selection, crutching, vaccinating, drenching, scoring, regular weight monitoring. I thank them for their commitment, effort and interest in striving to continually improve the Yanco White Suffolk sheep and stud.

Ellie Quinn
White Suffolk Stud Manager

Yanco's Breeding Program

Using LAMBPLAN to make consistent genetic improvement.

The Yanco breeding program is centred on a sound combination of genetic principles and practical experience with the aim of breeding modern, profit-making sires for commercial lamb production.

Yanco uses **LAMBPLAN** to provide accurate information on the genetic merit of individuals in our flock. In LAMBPLAN, performance and pedigree information is combined to give Australian Sheep Breeding Values. **ASBV's** are calculated from systematic combinations of performance information on individuals plus their relatives. They are expressed as the difference between an individual's genetic merit and the genetic base to which the animal is compared.

Australian Sheep Breeding Values are provided in this catalogue for NINE main traits:

- **Birth weight (BWT):** Estimates the genetic difference between animals in liveweight at birth.
- **Weaning weight (WWT):** Estimates the genetic difference between in liveweight at 100 days of age.
- **Post Weaning Weight: (PWWT):** Estimates the genetic difference between animals in liveweight at 225 days of age.
- **Fat: (PFAT):** Estimates the genetic difference in GR fat depth at 45kg liveweight.
- **Eye Muscle Depth (PEMD):** Estimates the genetic difference in eye muscle depth at the C site in a 45kg liveweight animal
- **Worm Egg Count: (PVEC):** Estimates the genetic difference between animals in worm burden at 225 days of age.
- **Lean Meat Yield (LMY):** Estimates the genetic difference in the percentage of lean meat at slaughter.
- **Intramuscular Fat (IMF):** Estimates the genetic difference between the chemical fat percentage in the loin muscle of a lamb, and is often referred to as marbling. IMF has been shown to have a significant impact on the flavour, juiciness, tenderness and overall likeability of lamb.
- **Shear Force (SHEAR F)** Estimate the genetic difference in the force or energy required to cut through the loin muscle of lamb after 5 days of ageing, the ASBV is reported in deviations of kilograms of force.

In addition, the catalogue includes 1st August 2020 index values on Lamb2020 + Eating Quality (LEQ) and Terminal Carcase Production Index (TCP).

LAMBPLAN reports are prepared using data supplied by breeders and/or accredited operators. **LAMBPLAN** cannot guarantee the accuracy of this data. **LAMBPLAN** ASBV's are designed to estimate genetic merit of sheep from data supplied. **LAMBPLAN** reports are provided to assist breeders but no liability is accepted for any outcomes resulting from the use of this information.

Yanco's genetic progress against the White Suffolk Breed

The graph below indicates Yanco's genetic progress compared to the White Suffolk breed average for all animals measured by LAMBPLAN for the Lamb2020 + Eating Quality (LEQ index). The blue columns are Yanco, Terminal-23 (white columns) is the White Suffolk breed and the gold columns represents all terminal breeds performance recorded on LAMBPLAN. Yanco continues to be above the average for both the White Suffolk and other terminal breeds for LEQ, owing to an emphasis on improving eating quality, growth and muscling in the breeding objectives.

The Genetic Progress of Yanco White Suffolks Compared to the average of the White Suffolk and Terminal breeds

LEQ (LAMB2020+Eating Quality) Index Progress of Yanco White Suffolk Stud (230542)

Note that 2022 data has not gone into the system as yet

Selecting an Individual Ram Using ASBVs for Your Market Specifications

Step 1. Understand your market requirements/specifications

Example:

Market Specifications: 18 - 24 Kg carcass and 2 fat score, positive muscling

Marketing Option: Over the Hook on the Grid

Dams: Medium framed Merino ewes

Step 2. Select the most appropriate ASBV's for your market requirements.

It's is **extremely important** to check the individual ASBV's to select your ram(s):

Birth Weight ASBV (BWT)

This trait is becoming increasingly important as birth weight is positively correlated with post weaning weight. This means as post weaning weight ASBV's increase there tends to be a slight increase in birth weight ASBV's. To negate this phenomenon producers should aim to select rams with lower birth weight ASBV's compared to the current years terminal sire average.

- **Weaning Weight ASBV (WWT)**
The higher the ASBV figure the better for superior earlier growth (100 days) of lambs.
- **Post Weight ASBV (PWWT)**
The higher the ASBV figure the better for superior later growth (225 days) of lambs.
- **Post Weaning Fat ASBV (PFAT)**
The general rule is the higher the growth rate of the ram the less emphasis may be placed on Post weaning fat.

Factors where **increasingly positive ASBV's** for fat are possibly required;

- Extremely lean dams e.g. Finns and East Friesians.
- Lambs have trouble "finishing" at the desired market weight
- Targeting the domestic trade market

Factors where **increasingly negative ASBV's** for fat are possibly required;

- Fatter type dams e.g. Crossbreeds
- Lambs are commonly marketed at 8 – 11 months of age
- Heavier carcass weights (24+ Kg CWT)
- Lambs often receive a discount due to excessive fat.

Note: Please ensure your selected ram(s) fit into your target market as each individual producer's requirements will be slightly different depending on their individual circumstances.

- **Post Weaning Eye Muscle Depth (PEMD)**
This trait is especially important for producers involved in over the hook (OTH) sales of elite carcasses that require a positive grade for muscling. They will need to select animals with above average post weaning eye muscle depth ASBV's compared to the current years Terminal Sire average in an effort to help meet the market specifications.
- **Post Weaning Worm Egg Counts (PWEC)**
This trait is important for producers who are concerned about worm burdens and wish to decrease their future reliance on chemicals. Select those animals with a **negative** PWEC.

Step 3. Check if an Index is appropriate to your market requirements.

Lambplan indices are developed to meet the requirements of selecting animals for different production systems. You should use the index that best suits your production systems, environment and market requirements.

- **LEQ index** is targeted at progressive terminal lamb producers interested in improving the meat eating quality of their prime lambs while continuing to improve production in a balanced way including Birth Weight (BWT) and Worm Egg Count (WEC). Yanco now selects and breeds using LEQ index as meat eating quality is becoming increasingly important to consumers.
- **TCP Index** is the replacement for Carcase Plus index which was retired in March 2020. The TCP index has been created to assist producers to achieve both gains in their major production traits, such as post-weaning weight and muscling, as well as ensuring consumer satisfaction from lamb is maintained through focusing on key eating quality traits such as shear force (tenderness) and intramuscular fat (marbling).
- If your production system is **significantly different** (i.e. requires **positive** fat ASBV's, earlier or later turn off, lighter or heavier carcase weights) go to step 4.

Step 4: Final assessment

The ASBV figures are important and an index (TCP and LEQ) can be useful, but they are only a tool in helping you select the best ram(s) suited to your production system. Therefore, you should always check that the animal meets your requirements for maturity pattern, conformation and structural correctness.

Finally, remember if you are unsure **please don't hesitate to ask**.

Australian Sheep Breeding Values for Lean Meat Yield and Meat Eating Quality

Lean Meat Yield (LMY %)

This trait is a measure of the commercial yield of lean meat as a percentage of hot carcase weight. Lean meat yield is estimated from a combination of weight, muscle and fat dimensions and has been validated by either CT scanning or through direct commercial bone-outs. Select those animals with the most **positive** LMY.

Intramuscular Fat (IMF %)

This trait is a measure of the chemical fat percentage in the loin muscle of a lamb and is often referred to as marbling. IMF has been shown to have a significant impact on flavour, juiciness, tenderness and overall likeability of lamb. Select those animals with the most **positive** IMF

Shear Force (SHEARF5 kg)

This trait is a measure of the force required to cut through the loin muscle of a lamb after 5 days of ageing, and is recorded in kilograms of force. The trait has moderate / high heritability and a moderate correlation with tenderness in lamb. Thus, the most negative SHEARF5 figure indicates more tender lamb loin muscle. Select those animals with the most **negative** SHEARF5

Sheep Structural Assessment

The Yanco Sale rams have been structurally assessed in August 2022. The system uses the Researcher Version of Visual Sheep Scores developed by Australian Wool Innovation Limited (AWI) and Meat and Livestock Australia (MLA). All females have been and will continue to be structurally assessed to ensure the Yanco flock maintains a structurally sound breeding base. Any animals deemed inadequate will be culled.

The Visual Scores are reported alongside the animal data in the catalogue in 2022 and was conducted on the 1/8/2022. Please note, these are a snapshot score at that point in time. Some scores may change. All toe scores were performed prior to trimming of feet due to wet conditions.

Please note, these scores are performed subjectively by students, under the guidance of stud manager, Ellie Quinn.

How to use The Visual Sheep Scores

The Sheep Structural Assessment System uses a 1-5 scoring system for each conformational trait. A score of 3 is usually ideal, with 2 and 4 being slight-moderate deviation from the ideal conformation and 1 and 5 being extremes of the trait. Yanco does not catalogue animals with these extreme conformational issues.

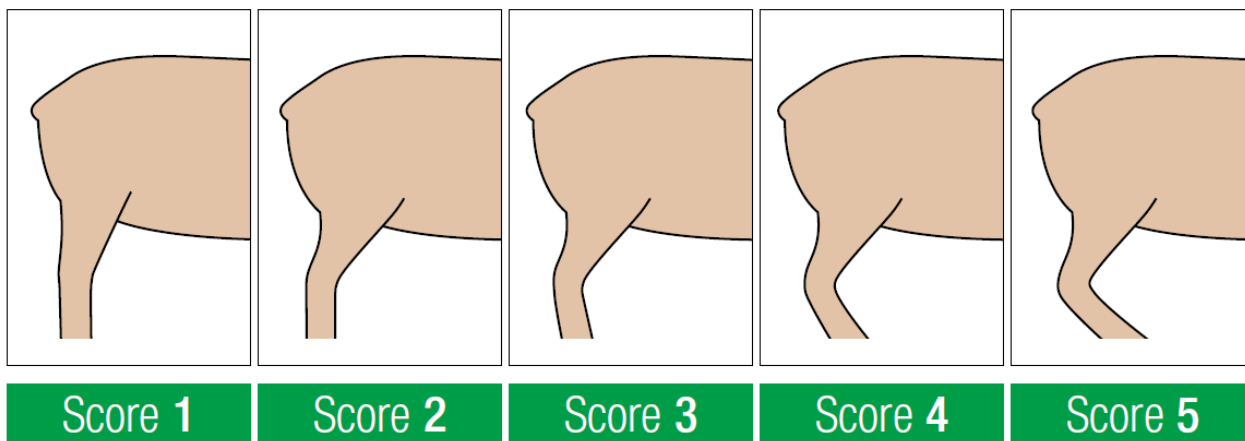

Hocks

Hocks refers to the soundness of leg structure, in particular the angulation of the hocks joint.

Score 1: Very little or no hock angulation, i.e. post-legged

Score 3: Moderate hock angulation (ideal)

Score 5: Extreme hock angulation, i.e. sickle-hocked

Pasterns

Pastern refers to the soundness of structure, in particular the angulation of the pastern joint.

Score 1: Very little of no angulation of the pastern, i.e. walking on the front of the toe

Score 3: Moderate angulation of the pastern

Score 5: Extreme angulation of the pastern, i.e. pasterns resting on the ground

Front Legs

Front legs refers to the soundness of leg structure, in particular the orientation of the front legs and feet.

Score 1: Extreme inward orientation (pigeon-toed) of the pasterns and feet

Score 3: Pastern and feet have no orientation, i.e. point squarely forward

Score 5: Extreme outward orientation (splayed) of the pasterns and feet

Back Legs

Back legs refers to the soundness of the hind leg structure, in particular the orientation of the back legs and angulation of the hock joints in relation to the feet.

Score 1: Upper hind legs close together and orientate inwards; hocks touching and feet splayed; extreme angulation of hocks

Score 3: Good width of stance; straight hind legs that stand squarely over feet.

Score 5: Hind legs that 'bow' outwards at the hocks, pasterns and feet 'pigeon toed', extreme angulation of hocks

Toes

Toes refers to the direction and the degree of the growth of the toes on all four feet.

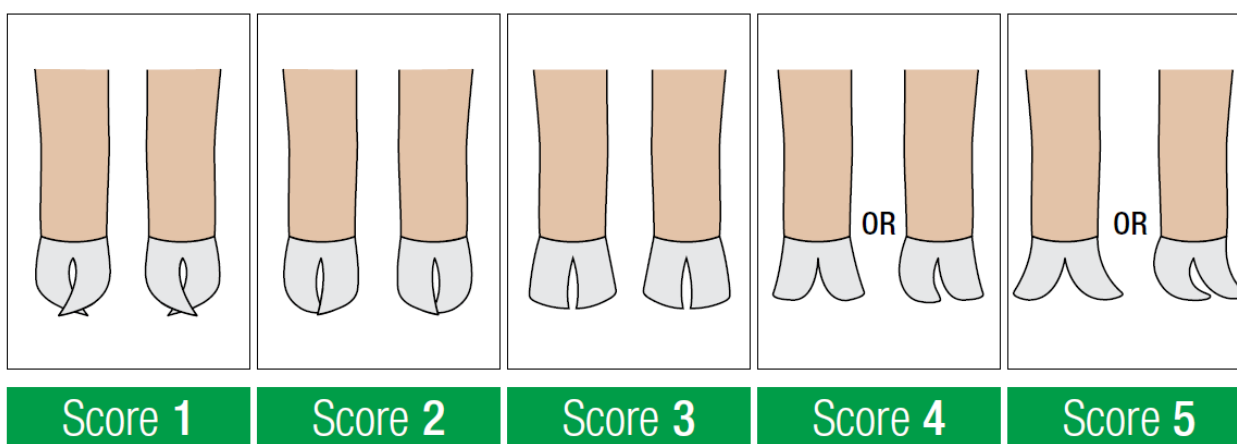

Score 1: Long or very long toes that curl severely inwards and crossover

Score 2: Long or very long toes that curl slightly inwards and touch.

Score 3: Toes growing straight and do not touch one another; are square and normal length.

Score 4: Long or very long toes that open slightly outwards or are slightly rolled over (either inward to outward).

Score 5: Long or very long toes that open severely outwards or are severely rolled over (either inward to outward).

Shoulders

Shoulder refers to the soundness of the shoulder blades and their positioning in relation to the neck and spine.

Score 1: Extremely low and narrow shoulder blades that create a sharp 'ridge' above the spine; back dips severely behind the shoulders.

Score 2: Shoulders positioned slightly below the spine to create a 'ridge'; back dips slightly behind the shoulders.

Score 3: Shoulder blades sit squarely either side of the spine i.e. no trough or ridge between the shoulders; back straight between shoulders and hips.

Score 4: Shoulders positioned slightly above the spine to create a 'trough' between the shoulder blades; back dips slightly behind the shoulders.

Score 5: Extremely high and wide shoulder blades that create a deep 'trough' above the spine; back dips severely behind the shoulders.

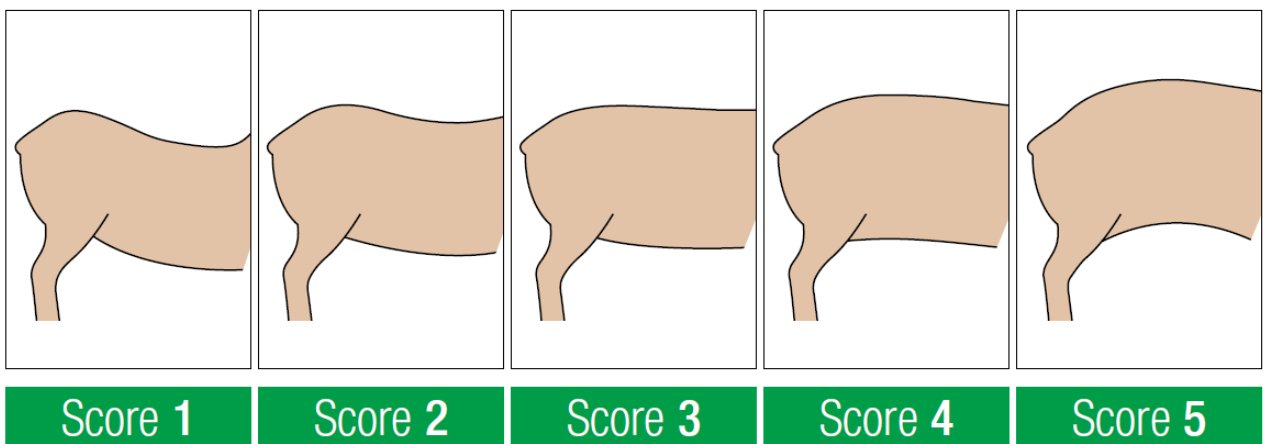

Back

Back refers to the soundness of the back structure, in particular the degree of 'dip' or 'arch' in the sheep's backline.

Score 1: Extremely 'dipped' backline; back is severely swayed downwards.

Score 3: Back straight between shoulders and hips.

Score 5: Extremely 'arched' backline; back is severely arched upwards.

Re: Yanco Agricultural High School rams pre- sale fertility check

Dear Yanco team,

Please see below a letter from Coolac Veterinary Services to use as you like for your upcoming sale.

On the 2nd of August 2022 we inspected the Yanco ram group. The goal of this is to provide a pre-sale fertility assessment of individual rams, so that their clients can be confident that rams purchased should be fertile, functional, and ready to work. To our knowledge the protocol undertaken is leading the sheep seedstock industry in doing more rigorous fertility assessments as a baseline for all ram's pre-sale.

Each ram is examined for several fertility traits, which have all been recorded with the rams individual ID and are available to buyers if needed. These traits include scrotal circumference, testicle tone and palpation of structures associated with the testicle, penis examination (which in general has not been practiced by industry to date), teeth assessment including jaw alignment, and leg and feet assessments.

Fertility assessment is a single point in time activity. The vendor has done everything possible to provide rams that are ready to work. However, we strongly advise that once the ram is home and settled, it is wise to check them before their first joining, and EVERY year 6-8 weeks pre-joining. A lot of work is expected of rams, and their functionality is paramount to your flock's fertility. They are a high value animal, but only if they are in working order. Please don't let them get over-fat, aim to keep them in body condition score 3, look after their feet, practice good biosecurity, be aware of Brucellosis risks, and have an accredited veterinarian assess their reproductive potential each year, so that EFFECTIVE rams are being put to work.

Please feel free to call with any questions of if further information is required.

Regards,

Tom Graham – VSB registration N9050

Simon McPhee – VSB registration N10543

Using LAMBPLAN to compare individual animals

The table below allows the comparison of individual rams against the performance of all other 2022 drop terminal Sire animals measured on Lambplan irrespective of breed.

Percentile Bands

* Lowest values are more desirable

** Varies with the genetic potential of the dam, target market specifications and your enterprise production system

For Example: Lot Number 1: YANCO 210004

Lambplan Characteristics	ASBV's	Percentile Band
Birth weight (kg)	0.28	Top 30%
Weaning Weight (kg)	12.54	Top 5%
Post Weaning Weight (kg)	20.28	Top 1%
Post weaning fat (mm)	0.37	Top 10%
Post Weaning Eye Muscle Depth (mm)	3.31	Top 10%
Post Weaning Worm Egg Count (%)	-63.40	Top 5%
Lean Meat Yield (%)	3.53	Top 50%
Intramuscular Fat (%)	0.22	Top 5%
Shear Force (%)	-1.15	Top 5%
Terminal Carcase Production Index (TCP)	163.54	Top 5%
LAMB2020 Eating Quality Index (LEQ)	170.36	Top 5%

How to Maximise the Potential from your White Suffolk Rams

These Yanco White Suffolk rams have been recently checked by a veterinarian and are free of disease but are still actively growing. On arrival home we suggest they are kept away from older rams to avoid any risk of injury from fighting.

YEAR ROUND MANAGEMENT

- Maintain weight within \pm 10 Kilograms of the rams individual optimum weight .(i.e. 100 Kilograms) and a fat score of 3 all year round. Thus this ram should stay between 90 – 110 Kilograms. Over-fat rams are more prone to breakdown due to excessive weight on limbs and are less mobile around the paddock.
- Shearing rams 8 - 10 weeks prior to joining is recommended. Shearing too close to joining can be detrimental to semen quality in hot weather, as the fleece protects the animal against high radiant temperatures.
- Ringing around the pizzle is warranted especially if belly wool is burry.
- Ensure rams are drenched (with an effective drench) at strategic times along with the rest of the flock.
- Maintain an annual booster vaccination of 6 in 1.
- Keep rams feet trimmed if necessary to reduce the risk of lameness or foot abscess. A ram with feet problems will seek out and mount ewes less actively than normal.
- Jetting ram on the poll during fly season may help to avoid strike and losses.
- Avoid handling of rams in such a way they are “tonguing” within 6 weeks before mating as this may cause reduced fertility. These practices include; excessive speed in moving the rams or limited rest periods especially in hot weather, shearing, crutching and foot trimming.

PRE-MATING MANAGEMENT

- Carry out a pre mating physical examination prior to mating to ensure there are no problems with feet, teeth, testicles, penis and scrotum
- Supplementary feeding of rams 6 - 8 weeks prior to joining can have a marked effect on the semen quality and volume. Feeding lupins approximately 0.5 - 1 Kg / head / day after an initial introduction program should be plenty to achieve a result.
- Ideally, ram should be in condition score 3.5 - 4 prior to joining.
- If joining rams after a long dry spell without green feed, supplementation with vitamin A may be necessary 8 weeks prior to joining and just before mating.
- Yanco White Suffolk rams can be safely joined at 1.5 - 2 % unless the geography, pasture availability, paddock size and high ambient temperatures require an increase in the ram percentage. The optimum joining period is for 2 cycles: that is five weeks. Longer joining period may be required for autumn drop lambs. e.g. 8 weeks
- If possible, do not mate old rams and young rams together because of domination. Also, mate older rams with maiden ewes and young rams to older ewes

We hope the above information helps you to get the best from your Yanco White Suffolk rams. For more detailed information please don't hesitate to ask.

Rams are bred for high growth.
After all, weight is what you get
paid for!

Rams are
selected for
muscling in
the loin and
leg. They are
the most
expensive
cuts.

Rams are bred
from the best
genetics in
Australia and then
performance
tested to identify
the best

About Superwhites:

- The SuperWhites genetic improvement group was formed in 1995 and comprises 20 members across Australia
- The group has a strong commercial focus and is committed to producing the highest performing White Suffolk rams in Australia
- The group select rams that perform in the paddock under commercial conditions
- The group identify the best genetics in Australia each year and use these within member flocks
- Collectively the group represent 5,000 breeding ewes and produces around 15% of

ENROLMENT INFORMATION

YEAR 7

Applications need to be lodged **on line** with the Selective Schools Unit in the November when students are in Year 5

Selective Schools Test is in March of Year 6 and offers are made in June of Year 6

YEARS 8 TO 11

Applications are made **directly** to the school and are available in June each year.

Interviews are held in July - August

TRANSITION PROGRAM

All students who have accepted places for the coming year are invited to come to YAHS with their parents in late November to participate in the Transition Program. This involves the student spending 3 days and 2 nights at the school meeting their peers and learning about how the school and hostel operate.

YANCO WHITE SUFFOLKS

DIRECTIONS

Yanco Agricultural High School is located 10 kilometres from Yanco and 24.4 kilometres from Narrandera on Euroley Road. It can be reached from Leeton by travelling down Irrigation Way, through Yanco and turning right onto Euroley Road, then turning left after approximately 2km at the second entrance to the School. Inspections by appointment only.

Special thanks goes to the Staff and Students of Yanco Agricultural High School, Tim Hutchinson from Breed and Hutchinson and Dominic O'Mahoney from Elders Narrandera, Stuart McVittie and Annabel Lugsdin from Bel's Rural Photography for assisting with the preparation for the sale.
