**CYDECTIN**

**The longest lasting protection going around.**

For long term protection against *Haemonchus*, *Ostertagia* and *Trichostrongylus* choose Cydectin® Long Acting (LA) Injection for Cattle. Just one small dose of Cydectin LA is enough to give long term protection against *Haemonchus* for 120 days, *Ostertagia* for 112 days and *Trichostrongylus* for 72 days.

That puts it in a world of protection all on its own. Insist on Cydectin Long Acting Injection and really protect your most important assets.

**CYDECTIN® LONG ACTING**  
INJECTION FOR CATTLE

No known impact on dung beetles\*

## Vendors Checklist

### STALL PLACEMENT & FITTERS

If fitters require different owner's bulls to be tied together, please notify Sally Packham by faxing 02 6889 4304 or email knspackham@bigpond.com or Andrew Rayner by phoning 02 6373 8677 or 0429 820 223 by 20th May 2016

### NECKTIES

The vendor of any animal that requires re-tying during or after the show will be charged a \$50 fine (plus the cost of the necktie). After the sale is completed, all bulls left for the buyer or their transport agent, MUST be fitted and tied with a necktie as well as the halter. This is the responsibility of the vendor. Failure to pay the fine will result in refusal of your entries in future years.

### INSPECTIONS

All inspections will be held Sunday 5th June 2016 ONLY from 9am to 1pm. At this time the completed Vendor Declaration and Herd Health Declaration forms must be submitted in order for inspection to be completed. Additional copies of these forms can be obtained by contacting HAL on 02 6772 1399. If your bulls will not be arriving at the showground before 2pm you must notify Sally Packham by phoning 0428 822 045 or Andrew Rayner on 0429 820 223.

### COMPULSORY UNIFORM

All people leading bulls in the ring must wear the compulsory breed uniform of denim jeans, maroon vest, new Herefords Australia shirt, a tie and for females a scarf or tie.

### ADVERTISING

No advertising is to be displayed for stud sponsors unless the sponsor is also an official sponsor of the Herefords Australia National Show and Sale (Dubbo) 2016. This includes promotional clothing.

BULL ARRIVALS Strictly no bulls are permitted to arrive at the Dubbo Showground prior to the morning of Friday 3rd June 2016 without prior approval.

### PRESSURE CLEANERS

No pressure cleaners of any sort to be used on the wash bays.

### ALL LOTS REGISTERED WITH HEREFORDS AUSTRALIA

## Purchasers Checklist

### ALL LOTS VET INSPECTED

### ALL LOTS FAT SCANNED ON-SITE

### ALL LOTS HA REGISTERED

### ALL LOTS SEMEN TESTED

### ALL LOTS TESTS PI NEGATIVE

### INSURANCE AVAILABLE ONSITE

### FREIGHT REBATE

will be available to the purchaser of five or more bulls at the 2016 sale. Contact your selling Agent.

### BRUCELLOSIS FREE

Dubbo Showground is provisionally 'Brucellosis Free' for this sale and animals may be moved to all areas.

### DELIVERY

All delivery instructions must be given in writing and signed by the buyer or the representative at the sale. A buyer's instruction slip is included in the back of this catalogue. NO VERBAL INSTRUCTIONS WILL BE ACCEPTED.

### Most Successful Exhibitor:

The Most Successful Exhibitor of the Show will be awarded to the Exhibitor who compiles the highest point score throughout the Show and Sale. Points will be allocated as follows:

<b>Show Classes:</b>	1st place 5 points	4th place 2 points
	2nd place 4 points	5th place 1 point
	3rd place 3 points	

**Sale Section:** Bulls selling above the previous years average, rounded to the nearest \$500, will get 5 points.

NOTE: In the event of a tie, 2 points will be awarded to each Champion, providing they have been sold to an outside buyer. Points shall not be allocated for Show and Sale in the event of an animal not being sold by the exhibitor at auction.

## Breedplan made easy

**Breedplan is a performance evaluation program that compares bulls “on a level playing field” for a number of important commercial traits.**

The difference between a bull's genetics and the breed benchmark for a range of traits is reported as an **Estimated Breeding Value (EBV)** – an estimate of how a bull will perform as a parent rather than how he looks on the day.

EBVs can be positive (+) or negative (-), ie, above or below the breed benchmark of zero.

EBVs are calculated from the available performance information on the animal, its parents, progeny and its close relatives within the breed.

The information is adjusted for age, dam age, and for differences between herds, years, season of calving, management effects and for mating and selection biases. The heritability of the trait is also taken into account.

**EBVs – what do they tell me about a bull**

### BIRTH

**Birth Weight:** The Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

### FERTILITY

**Scrotal Size:** The Scrotal Size EBV (cm) is an indicator of male fertility. Higher (positive) EBVs indicate higher fertility. Higher SS EBVs are also positively associated with female fertility through earlier age of puberty.

### GROWTH

**Milk:** 200-Day Milk EBV (kg) is an estimate of the contribution that a dam makes to the 200 day weight of her progeny. For sires, this is an indication of the contribution that his daughters will make to the 200 day weight of their calves.

**200-Day Growth:** The 200-Day EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages (ie. 8-10 months).

**400-Day Weight:** The 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600-Day Weight:** The 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

### CARCASE

**Eye Muscle Area:** The EMA EBV (cm<sup>2</sup>) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate better muscling on animals.

**Rib Fat:** The Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

**Rump Fat:** The Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

**Intramuscular Fat Percent:** The IMF% EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcass. More positive EBVs indicate higher marbling.

EBVs on sale cards displayed on sale day may vary from those published in this catalogue.

## Hereford group breedplan data:

### 1. Minimum Requirements

Bulls appearing in this catalogue are required to have current reportable Group Breedplan EBV's for 200, 400 and 600 day weights, fat depth (rib and rump), eye muscle area and intramuscular fat.

### 2. Traits Observed

The Breedplan data for each lot in this catalogue carries a “Traits Observed” indicator. This identifies those traits for which the animal has been directly measured and the animal's measurement has been included in the BREEDPLAN analysis. Where an animal has not been observed for a trait, the EBVs have been calculated from measurements on other related traits and the performance of the animal's relatives.

## Breedplan accuracy

### What is Accuracy?

By definition, an EBV is an estimate of an animal's true breeding value. The "accuracy" figure produced with each EBV provides a measure of the stability of the EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal, its progeny or its relatives.

Accuracy figures are reported as a percentage (%) between 0 – 99, with higher accuracy values indicating that more information has been used in the calculation of the EBV than a lower accuracy value.

### How do I interpret Accuracy?

The following guide may be useful for interpreting accuracy:

**Less than 50% accuracy** - the EBVs are preliminary. EBVs in this range will have been calculated based on very little information. These EBVs could change substantially as more direct performance information becomes available on the animal.

**50-74% accuracy** - the EBVs are of medium accuracy. EBVs in this range will usually have been calculated based on the animal's own performance and some limited pedigree information.

**75-90% accuracy** - the EBVs are of medium-high accuracy. EBVs in this range will usually have been calculated based on the animal's own performance coupled with the performance for a small number of the animal's progeny.

**More than 90% accuracy** - the EBVs are a high accuracy estimate of the animal's true breeding value. It is unlikely that EBVs will change considerably with addition of more progeny data.

Although the accuracy of an EBV should be considered, animals should be compared on EBVs regardless of accuracy. Where two animals have the same EBV however, the animal with the higher accuracy would normally be used more heavily than the bull with the lower accuracy because the results can be predicted with more confidence.

**Remember, all information that is known about an animal and its relatives is considered in the calculation of its EBVs. Subsequently, the EBV will be the best estimate available of an animal's genetic merit, regardless of accuracy.**

### TRAITS OBSERVED:

Identifies those traits for which the animal has been directly measured and the animal's measurement has been included in the BREEDPLAN analysis.

AVERAGE EBVS 2014 BORN CALVES

## Hereford selection indexes

There are currently four different selection indexes calculated for Australian Hereford animals. These are:

- Supermarket Index
- Grass Fed Steer Index
- Grain Fed Steer Index
- EU Index

Each selection index describes a different production/market scenario and relates to a typical, self replacing Hereford herd in temperate Australia targeting the following specifications.

**Supermarket Index** – Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting the domestic supermarket trade. Steers are either finished on grass or grain (eg. 50 – 70 days). Steers are assumed marketed at 450kg live weight (250kg HSCW and 12mm P8 fat depth) at 17 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

**Grass Fed Steer Index** – Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture finished steers. Steers are assumed marketed at 600kg live weight (33kg HSCW and 8 mm P8 fat depth) at 23 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

**Grain Fed Steer Index** – Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture grown steers with a 125 day feedlot finishing period for the grain fed markets. Steers are assumed marketed at 600kg live weight (330kg HSCW and 20mm P8 fat depth) at 20 months of age. Daughters are retained for breeding. There is a significant premium if steers reach a marble score of 2 or greater.

**EU Index** – Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture finished steers for the EU market. Steers are assumed marketed at 620kg live weight (340kg HSCW and 14mm P8 fat depth) at 24 months of age. Daughters are retained for breeding. There is no marbling requirement.

**Hereford Selection Indexes** make bull buying easier. They take the hard work out of knowing how much emphasis you should give to each of the available EBVs when selecting a replacement sire by weighting the available EBVs according to their impact on the long-term profitability of your herd, balancing fertility and maternal traits with growth and carcass traits. The index is in fact

a multi-trait EBV that estimates the relative value of each animal to your chosen market goal – reflecting the extra earning capacity per cow joined in a self replacing commercial herd.

Animals can be compared using Selection Index values in the same manner as comparing them using EBVs for single traits, but instead of looking at a large number of EBVs (up to 18) the first screening at least, can be on the single index value. You may then fine tune the match with your herd by considering individual EBVs.

Typical production statistics, prices and costs underlie each Index. Each index has subtly different input statistics appropriate to the market end-point, eg. age and weight at sale, marbling etc.

Benefits and costs evaluated include both those for the long-term sustainability of the cow herd and those for the sale animal from birth to slaughter. Essential compromises between traits such as the flow-on effects of increased growth on birth-weight & cow maintenance are accounted for when calculating indexes.

In pasture phases, feed is assumed to be a limiting factor for part of the year, and that any increase in feed requirement at herd level is a cost. The assumed herd calving rate and level of calving difficulty each reflect a moderate level of concern that these traits not change unfavourably from the selection of new sires.

Animals will have selection indexes reported only if sufficient information has been recorded for them. Specifically, an animal must have:

- performance recorded with BREEDPLAN or progeny with performance recorded
- one of the birth EBVs (B.Wt, CED) with an accuracy of 40% or higher
- one of the growth EBVs (200, 400, 600) with an accuracy of 40% or higher
- one of the scan or carcass EBVs (EMA, IMF, Fat Depth) with an accuracy of 40% or higher
- one of the fertility EBVs (DTC, SS, CEDtrs) with an accuracy of 30% or higher

Selection index values will not be reported for animals that do not meet these criteria.

# MULTIMIN<sup>®</sup>

Injection for Cattle

**OPEN THE WINDOW OF PRODUCTIVITY BEFORE JOINING.**

Deliver essential trace minerals quickly when they have the most impact.

MULTIMIN<sup>®</sup> is a multi-mineral injection designed to be used at critical times in the production cycle. One such window of productivity is the 30 days before joining. Given during this time, the minerals in Multimin can assist conception and embryo survival, leading to a tighter calving pattern.

- Contains selenium, copper, zinc and manganese, trace minerals that are essential for conception and maintenance of pregnancy.
- Improve fertility and improve your return.

**Contact your local area sales manager today.**

# RED + WHITE

A BANK BALANCE IN THE BLACK

**NEW  
HEREFORD  
RECORD SET**

- March - April 2016**
- ✓ Hereford steer weaners top the 2016 Mountain Calf sales on March 15-16 at \$1420.
  - ✓ Hereford steer weaners top the Bothwell weaner sale on April 7 at \$1530.

Herefords, the number one choice in any beef breeding program, deliver: Superior meat eating quality backed by MSA; Increased weight gain on grass; Docility and doability second to none; Eligibility for the new Hereford branded beef program; And that all adds up to higher profitability.
