RAMS FOR EARLY LAMBING FLOCKS

At Chrome we have put a strong focus and built a reputation for producing an even flock of sheep with predominantly black noses and black feet, which ideally prefer to lamb no earlier than 1st of June.

This emphasis has worked well as the majority of our clients are happy with their time of lambing or have come from a merino background.

Whilst 2 to 3 crosses of our Chromedales has worked fine to date we have a few clients wanting to continue lambing in May due to cropping programs etc. so, we introduced some "early lambing" genetics a couple of years ago to cater for the needs of these producers.

These are Chromedale rams in most aspects, except that they will produce ewes to lamb a bit earlier and have more pink noses and generally whiter feet.

VISUAL TRAIT SCORES

Due to the fact we are running our sale on line this year in conjunction with the on property auction we have included three visual trait scores on our Chromedale, Perendale and Coopworth rams to help buyers get as much information on the rams as possible. Without trying to complicate the selection process too much we have added 3 basic visual scores to aid in selection.

Pigment Scores

Score 1	Black nose and good pigment around eyes
Score 2	Partially black nose and generally less eye pigment
Score 3	Totally pink nose and no eye pigment

Foot Colour

B	= Black
S	= Striped
W	= White

Skin Type

Based on skin surface and type but not necessarily micron and are the range of skin types within our sale group. Have tried to make it as simple as possible with 3 easy to distinguish types

F	= Finest type skins
M	= Medium skins
C	= Coarse/Stronger, more open woolled types

ASBV ABBREVIATIONS IN THE CATALOGUE

BWT	Birth Weight
WWT	Weaning Weight (approx. 100 days of age)
PWWT	Post Weaning Weight (approx. 225 days of age)
YWT	Yearling Weight (approx. 360 days of age)
AWT	Adult weight (approx. 530 days of age). To reduce adult ewe size select rams with lower figures.
MWWT	Milk. Milking ability of a rams daughters
PFAT	Post Weaning Fat Depth (approx. 225 days of age)
PEMD	Post Eye Muscle Depth (approx. 225 days of age)
PFEC	Post Weaning Faecal Egg Count (approx. 225 days of age)
WR	Number of lambs weaned per ewe joined expressed in the units of 'lambs'
DAG	Dag Score - the lower the score the better
YWR	Yearling Number of Lamb Weaned - used for specifically mating ewe lambs
YFD	Yearling Fibre Diameter - Average fibre diameter of a representative sample of wool from a sheep
BCOV	Breecch Cover - The BCOV information is considered a research breeding value, as it is not a routine trait reported for the Maternal LAMBPLAN evaluation. Sheep Genetics' intention is to do further validation of this trait in Maternal breeds into the future, however can be a useful tool for within flock selection in those flocks who are recording the trait.

OTHER ABBREVIATIONS

tw or **tr** Rams that are born as twins or triplets. Shown following the ID number.

Note that the NLW breeding value is a more accurate reflection on the potential fertility of a ram's daughters.

Bold ASBVs in catalogue = traits in the Top 20%

SHEEP GENETICS UPDATES

Updates to the Maternal Indexes

Number of Lambs Weaned (NLW) has been replaced by an improved ASBV called Weaning Rate (WR). This new ASBV has been included in the indexes for Maternal breeds.

Sheep Genetics has released a new trait that measures reproductive performance called Weaning Rate (WR). WR combines the traits of Conception (CON), Litter Size (LS) and Ewe Rearing Ability (ERA) into a single ASBV for selection. WR has been introduced to replace Number of Lambs Weaned (NLW) and has been included in the Maternal Carcase Production Plus (MCP+) Index.

Updates to the Terminal Indexes

The TCP Terminal Index has been updated to include Lambing Ease

Sheep Genetics has updated the TCP Terminal index to include the Lambing Ease (LE_DIR) ASBV. Lambing ease was included in the index as a way to address industry concerns around lambing difficulties and dystocia while having minimal impact on the rate of progress for growth and other important production traits.

LE_DIR is a trait that defines the genes a ram's progeny will have for easy birthing. A higher LE_DIR value is more desirable.

The overall objective of the index remains the same, with only the addition of LE_DIR. The objective of the TCP index is TCP balances increased lean meat yield with modest improvements in eating quality.

The addition of LE_DIR in the Terminal indexes and other analysis enhancements implemented by Sheep Genetics in 2022 have resulted in changes to ASBVs. This ram sale season it is important to re-benchmark using the latest percentile band table which can be accessed using the QR code below.

As a result of the introduction and inclusion of WR and LE_DIR in their relevant indexes there have been changes in the percentiles. Other enhancements to the Sheep Genetics evaluations, have also resulted in changes to ASBVs, Indexes, and the percentiles. *Therefore, this ram sale season it is important to use the percentile band table to re-benchmark to inform your ram purchasing decisions.*
