

# WILLANDRA

SIMMENTAL & RED ANGUS

WILLIAMS

## THIRTY FIFTH ANNUAL ON PROPERTY BULL SALE

TUESDAY, FEBRUARY 21ST 2023  
AT 12:30PM

COMPLIMENTARY BBQ LUNCH 11:30AM

OFFERING  
44 SIMMENTAL BULLS  
25 RED ANGUS BULLS  
4 ANGUS BULLS

JBAS 8

SELLING AGENTS

INSPECTION FROM 10AM

# AuctionsPlus

*Buy and Sell stock nationally*

**Buyers unable to attend the Willandra Sale will be able to bid on AuctionsPlus. Prospective bidders and purchasers must register with AuctionsPlus or contact their local agent prior to the sale.**

## **Willandra Simmental and Red Angus**

would like to acknowledge the generous support from our sponsors.

# WILLANDRA

**SIMMENTALS Founded 1972**  
**RED ANGUS Since 2000**

**Account**

**C.A.S. Cowcher & Son**  
**246 Kennedy Road**  
**Williams 6391**

**All bulls are diligently performance recorded and are offered for sale under the Zoetis Star quality assurance program. Bulls fertility tested by Nutrien Breeding Services.**

**Guarantee:** Bulls purchased at auction are guaranteed for fertility, temperament and structural soundness. The guarantee does not cover injury or disease incurred after delivery. Any claim must be accompanied by a relevant veterinary certificate.

## **National Bovine Johnes Assurance Score:**

Willandra is a JBAS 8 property. Bulls are eligible for entry into all states.

**Delivery:** The vendors at their expense, will deliver bulls purchased at auction to the purchaser's property. A rebate of 50% of the freight will be offered to interstate purchasers.

SIMMENTAL  
BULLS

# BREEDPLAN EBVs – HOW TO USE THEM

## **ESTIMATED BREEDING VALUES (EBV's)**

EBV's for growth traits are shown as + or – kg.s liveweight. The animals are ranked in comparison to a breed baseline of 0 for each trait. The EBV is the best estimate of an animal's genetic merit for that trait.

## **ACCURACY**

Accuracy (%) are presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV. As a general indication, accuracy below 75% should be regarded as low, 76%-85% as medium, and above 85% as high.

## **BIRTH WEIGHT EBV (kg)**

Use this EBV to select lighter birth weights. The lower the EBV, the lighter the calves are expected at birth.

## **200 DAY MILK EBV (kg)**

The EBV for 200 Day milk should be considered in breeding replacement females to ensure reasonable milking ability in the herd.

## **200 DAY GROWTH EBV (kg)**

An estimation of the bull's genetic merit for growth to weaning, calculated independently of the maternal milk effect. Use the EBV in selecting bulls for vealer production.

## **400 DAY WEIGHT EBV (kg)**

This EBV gives an estimation of the yearling weight potential. Steer and feeder producers should place most emphasis on this EBV.

## **600 DAY WEIGHT EBV (kg)**

This EBV is an estimation of the bull's genetic potential beyond yearling age.

## **CARCASE TRAITS**

### **EMA – EYE MUSCLE AREA EBV (cm<sup>2</sup>)**

Estimates genetic differences in eye muscle area at the 12th/13th rib of a 300kg carcass. More positive EBVs indicate better muscling on animals.

### **RIB – RIB FAT EBV (mm)**

Estimates the rib fat depth at the 12/13th rib of a 300kg carcass. More positive EBVs indicate more fat and earlier maturity.

### **RUMP – RUMP FAT EBV (mm)**

Estimates the fat depth at the P8 site.

### **RBV – RETAIL BEEF YIELD (%)**

Represents quantity of boned out meat from a carcass. Higher EBVs indicate better yielding carcasses.

## **PERCENTILE BANDS**

This table shows where a bull's EBV is ranked against the rest of the Simmental breed in Australia and New Zealand.

## Australian Simmental Selection Indexes

There are four different selection indexes calculated for Australian Simmental animals.

These are:

- Domestic Maternal Index
- Export Maternal Index
- Northern Terminal Index
- Vealer Terminal Index

Each selection index describes a different production/market scenario and relates to a typical commercial herd using Simmental bulls and targeting the following specifications.

**Domestic Maternal Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 60-70 days). Steers are marketed at 430 kg live weight (240 kg HSCW and 6 mm P8 fat depth) at 14 months of age. Daughters are retained for breeding.

**Export Maternal Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the export trade. Steers are finished on grain (e.g. 120 days) and marketed at 700 kg live weight (380 kg HSCW and 8 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

**Northern Terminal Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (e.g. Brahman cows) targeting the export trade. Steers are finished on grass and marketed at 630 kg live weight (345 kg HSCW and 12 mm P8 fat depth) at 28 months of age. This is a terminal production system therefore no daughters are retained for breeding.

**Vealer Terminal Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the vealer trade. Vealers are weaned and sold at 8 months of age weighing 350 kg (195 kg HSCW and 6 mm P8 fat depth). This is a terminal production system therefore heifers are not retained for breeding purposes.

All selection indexes are reported as an EBV, in units of relative earning capacity (\$) for a given production/market scenario. They reflect both the short term profit generated by a sire through the sale of his progeny, and the longer term profit generated by his daughters in a self replacing cow herd (where applicable).

# January 2023 SIMMENTAL TRANS TASMAN BREEDPLAN - for all 2021 born animals

Use this table as a guide to compare individual animals with the current genetic level of the breed

RED  
ANGUS  
BULLS

## Selecting Animals Using Red Angus Selection Indexes

The Selection Index value for an animal is effectively an EBV of the animal's **profitability in a defined commercial production system and market**. Ranking seedstock animals on their Selection Index value sorts them **based on their progeny's expected profitability for the targeted production system**.

### Red Angus Selection Index Descriptions

Supermarket (SUP) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 70 days). Steers are marketed at 450 kg live weight (250 kg HSCW and 12 mm P8 fat depth) at 15 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

Vealer (VLR) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting vealer production. Vealers are finished on grass and are marketed at 320 kg live weight (180 kg HSCW and 4 mm P8 fat depth) at 9 months of age. Daughters are retained for breeding. No marbling is required

Northern Steer (NTH) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia with *Bos indicus* cows targeting grass finished steers for export. Steers are marketed at 600 kg live weight (330 kg HSCW and 10 mm P8 fat depth) at 27 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.
