TALGOONA CHAROLAIS

We wish you a warm welcome to our 2nd annual production sale, following on from our successful inaugural sale last year. Thank you to all purchasers from last year, we appreciate your support and wish intending purchasers this year all the best.

Once again we will be offering a very even, consistent draft of moderate framed, well muscled, very easy doing bulls. We believe our focus of breeding consistent easy doing bulls is really evident in this years draft, where the spread of weights is very narrow, especially when weight per day of age is taken into account. The EBV's across the bulls are very similar showing the consistency of breeding and quality throughout the draft. We are of the opinion that even though there are slight variations between each bull, their progeny will be of similar quality due to the consistency within their breeding. Also the fact that our fat and IMF EBV's are all above breed average indicates that they are easy doing, easy finishing cattle. This not only means they lay down fat easier, but they are also more resilient when things get a bit tough.

Rockwood Magics influence on the herd is once again very evident in this draft of bulls. His excellent muscle pattern and exceptional softness can be seen in the bulls, and many people have commented on the great quality of his heifers, making him an all round great stud sire.

Our herd of consistent, easy calving fertile cows with good doing ability is still the backbone of our operation and we are looking forward to the arrival of calves this year by our new stud sire, Mt. William Rome (top priced bull at the 2022 Mt. William production sale) .

If you have any questions feel free to call Bryce on 0409169712

Bryce, Melissa, Sophie, Rachael and Jessica

Talgoona Charolais

Sale Information

Conditions of sale

- *all animals will be offered at auction. If not sold, they will be retained by the stud.
- *inspection any time before the sale can be arranged with Bryce Galvin 0409169712
- *Bulls will be on display from 9am on the day of the sale
- *Telephone bidding is available by contacting Anthony Cummins 0428457204
- *registration transfer fees are the responsibility of the vendor

Fertility Guarantee

Bulls are sold as fertile and capable of natural service. Any claim on a bull must be made within 12 months after sale date and be accompanied by a Veterinary certificate. The veterinary report must state that the bull has not suffered any injury or maltreatment which could have affected his breeding ability since delivery to purchaser. Bulls which do not breed will be replaced by a bull of equal value or a credit less salvage value at the next sale. Any issues please contact Bryce.

Health

The Talgoona herd is J-Bas 7. All animals derive from an accredited free T.B. and Brucellosis herd. Bulls were drenched at the beginning of March.

Delivery

Talgoona is offering free delivery within 200km of the property. Outside this delivery may be possible, contact and arrange with Bryce.

Insurance

Insurance is available, please speak with the agents, Nutrien or ABCummins.

Rebate

The vendor agrees to a rebate of 2% to outside agents who attend the sale or buy on behalf of their clients and settle within 7 days.

Address

Talgoona Charolais 33 Mittagong-Yerong Creek Rd. Yerong Creek N.S.W 2642.

Directions

From Yerong Creek take the Osborne Rd. for 3km, turn right into Mittagong-Yerong Creek Rd. go 300 metres and turn left into Talgoona Charolais.

Disclaimer: Any persons entering this property for any purpose what so ever including the attendance at cattle auctions do so at their own risk. We are not liable to you for any personal injury or death suffered by you and for the theft, loss or damage to any property caused or contributed to by us or by negligence deliberate act or unlawful conduct. "We" or "us" or "our" refer to the owners their employees contractors or agents and each of them. Whilst all care and attention has been paid to the accuracy in the compilation of this catalogue, neither the vendor nor the agents or representatives thereof assume any responsibility whatsoever for the correctness use or interpretation of the information included in this sale catalogue.

Estimated Breeding Values (EBVs)

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

CE % Dir = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

CE % Daughters = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination & hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length & therefore easier calving & increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic

differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

Selection Indices

Domestic Terminal Index (\$) [DTI] - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial herd where Charolais bulls are joined with a British breed cow base (e.g. Angus) targeting the domestic trade. This index assumes all progeny will be marketed with steers finished in the feedlot for 90 days, and weighing 450 kg (250 kg HSCW and 7 mm P8 fat depth) when marketed at 12 months. Heifers will be in the feedlot for 75 days, and weigh 430 kg (230 kg HSCW and 9 mm P8 fat depth) at 12 months. In response to industry feedback, positive emphasis has been placed on finishing ability.

Northern Maternal Index (\$) [NMI] - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial self-replacing herd where Charolais bulls are joined with Bos indicus cows in Northern Australia targeting the grass fed Jap Ox market. Selected heifers are retained for breeding and so maternal traits are of importance. Steers target 650 kg live weight (360 kg HSCW and 12 mm P8 fat depth) and heifers 630 kg (340 kg HSCW and 14 mm P8 fat depth), at 26 months of age. In response to industry feedback; positive emphasis has been placed on finishing ability.

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives R particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

For further information, contact the Charolais Society (02 6771 1666) or Charolais BREEDPLAN (02 6773 3059).

Comments: Rosedale Goolie was a long smooth bodied easy calving Poll bull with very good finishing ability. He has left a fantastic herd of females here at Talgoona, many of which are dams of the bulls in this sale. He also has one son in work at Mount William Charolais and his legacy will live on for many years to come.

Comments: Seth is a very smooth bodied stylish Poll bull with a great topline and excellent carcass. He is very clean through the shoulders and has great length with good structure and good carcass attributes. Another great Magic/Goolie combination and goes back to the great cow Heather who is still producing magnificent calves at 10 years of age. He has moderate birth weight with good growth and excellent fat EBV's.

Comments: Shelby is another typical Rockwood Magic son, with great length, good muscling and is very easy doing. He was a very good calf out of a 2 year old heifer, with a good weaning weight. He has a good temperament and will produce great vealers. EBV's indicate low birth weight, good growth and excellent fat and IMF.

Comments: Spencer is the youngest bull in the draft at just 17 months but takes on all with his presence and style. This young Poll bull is very clean through the shoulders, has great muscling, excellent finishing ability with a smooth deep body. He has low birth weight, good growth and excellent fat EBV's. Definite stud sire potential and could definitely be used over heifers.

How to Register and Bid on AuctionsPlus

1

Go to www.auctionsplus.com.au to register at least 48 hours before the sale.

2

Select “**Sign Up**” in the top right hand corner.

3

Fill out your name, mobile number, email address and create a password.

4

Go to your emails and confirm the account.

5

Return to AuctionsPlus and log in.

6

Select “**Dashboard**” and then select “**Request Approval to Buy**”.

7

Fill in buyer details and once completed go back to Dashboard.

8

Complete buyer induction module (approx. 30 minutes).

9

AuctionsPlus will email you to let you know that your account has been approved.

10

Log in on sale day and connect to auction.

11

Bid using the two-step process – unlock the bid button and bid at that price.

12

If you are successful, the selling agent will contact you post sale to organise delivery and payment.
