# Quamby Plains

THIRTY NINTH ANNUAL  
QUAMBY PLAINS  
POLL HEREFORD SALE

at

**“QUAMBY PLAINS” HAGLEY, TASMANIA**

THURSDAY 13<sup>TH</sup> APRIL, 2023  
commencing 1.30pm

**61 PERFORMANCE TESTED BULLS**

*LOT 3 - OPCS047*

*LOT 4 - OPCS054*

*LOT 6 - OPCS091*

*LOT 10 - OPCS107*

# 2023

## THIRTY NINTH ANNUAL QUAMBY PLAINS POLL HEREFORD SALE

Comprising: 61 Registered Poll Hereford Bulls

at

### “QUAMBY PLAINS”

1714 Meander Valley Road  
HAGLEY, TASMANIA

Thursday 13<sup>TH</sup> APRIL, 2023  
commencing 1.30pm

Helmsman Sale

# SALE INFORMATION

## **AUCTIONSPLUS**

This sale is interfaced with AuctionsPlus and will be conducted live online in real time. To bid you must register with AuctionsPlus and preferably 24 hours prior to the sale.

**VIDEOS:** Videos of the sale team will be available early March on our website - [www.quambyplains.com.au](http://www.quambyplains.com.au) or AuctionsPlus - [www.auctionsplus.com.au](http://www.auctionsplus.com.au)

## **INSPECTION:**

The Sale Bulls can be inspected from 10 am on sale day. Prior inspections are welcome and need to be arranged with vendor.

## **HEALTH:**

Quamby Plains' Johnes Beef Assurance (J-Bas) score is 7.

All bulls have had the following treatments:

- Vaccinated with 7-in-1
- Vaccinated with Pestivirus
- Vaccinated with Vibrovax
- All bulls are individually ear notched and tested negative as pestivirus carriers.

## **STRUCTURAL ASSESSMENT:**

All bulls were inspected by Dr Chris Donaldson in January 2023. All bulls were normal and sound in limbs. All bulls had normal testicles of good tone and consistency. All bulls exceed minimum standard of scrotal circumference.

All bulls were independently structurally assessed by Roger Evans, Bovine Scanning service in January 2023.

## **HEIFER BULLS:**

In the sale team there are a number of bulls that we believe are suitable for mating with Heifers. These are marked with a **H**.

- This selection is based on birth weight EBVs, positive Calving Ease and the bull's structure.

**GENOMICS:** All sale bulls have been genomically tested and sire verified. This gives greater accuracy in their EBVs.

## **POLLED GENE MARKER TESTS:**

We have tested all bulls for the Polled Gene test. The Poll Gene test identifies those that are Homozygous Polled (PP). There are 47 Homozygous Polled in our sale team. All progeny from Homozygous Polled bulls will be polled. The test also identifies those bulls that are Heterozygous Polled (Ph). Heterozygous Polled bulls are polled, but carry a horned gene. They can throw horned progeny if the horn gene is present in the cow. Largely, in a strong poll herd the poll gene is dominant to the horned gene. This test is a very useful tool for those herds who wish to genetically dehorn progeny.

## **COMPLETENESS OF PERFORMANCE:**

The 'Completeness of Performance' herd rating system has been introduced to assess the quantity of pedigree and performance information that has been submitted to BREEDPLAN by individual seedstock herds. A simple 1 to 5 scale star rating is calculated based on the proportion of calves and number of performance traits recorded. Quamby Plains has a star rating of 4.5 out of 5.

## **REBATE:**

A rebate of 4% will be available to all outside registering agents, introducing their buyers in writing 24 hours prior to the commencement of the sale and settling within seven days of the date of invoice.

## **FREIGHT:**

Free freight is provided to Flinders Island, King Island and Melbourne for bulls sold at the sale.

## **LIABILITY:**

Please note that any person entering Quamby Plains for any purpose do so at their own risk. The owners, employees and representatives, accept no responsibility for any accidents that occur.

## **ACCOMMODATION:**

Transport and accommodation are available in Launceston or through the agents, Nutrien Livestock.

## **CATERING:**

Morning tea and Lunch are supplied by the St Mary's Church Hagley, at a small cost.

## **DISCLAIMER:**

Whilst all care and attention has been paid to accuracy in the compilation of this catalogue, neither the vendors nor the selling agents or representatives thereof assume any responsibility whatsoever for the correctness, use or interpretation of information on animals included in this sale catalogue.

**COVID-19:** Current protocols will be adhered to at Quamby Plains regarding COVID-19.

# THE QUAMBY PLAINS EDGE

## STUD PRIORITIES

- The Quamby Plains Stud is committed to total performance. We have been performance recording for 41 years. This form of objective measurement has enhanced predictability and accuracy in the Estimated Breeding Values of our bulls and thus helping to meet market specifications and the breeding objectives of our clients.
- Fertility is still the number one priority in the breeding program.
- Quamby Plains places very high importance on carcass data. It is firmly believed that the commercial cattleman running high growth cattle with excellent eye muscle area and IMF and a higher than average yield, will generate a premium in all markets for MSA graded cattle.
- Quamby Plains runs a commercial herd of Poll Hereford cattle. This enables the stud to keep abreast of the commercial cattle industry and the changing market specifications.

## BREEDING OBJECTIVE

- Quamby Plains aims to consistently breed cattle that return the highest return per hectare under commercial conditions.
- The stud strives for excellent structural soundness. Dr Chris Donaldson annually assess each catalogue bull for this very important characteristic.

## COMMERCIAL QUALITY

- All the sale bulls are run in a large contemporary group on grass from the time of weaning to the day of the sale.
- The catalogue bulls are selected from 250 performance tested females. Such a large number from which to choose 61 sale bulls allows for a better selection process and more objective screening to complete the final list of top quality bulls.

# BREEDPLAN SELECTION INDEXES

SELECTION INDEXES WERE UPDATED IN NOVEMBER 2019. Selection indexes rank animals for single selection goal – **profit**. An index gives you a **single EBV** that reflects the value of an animal, to your breeding objective, in dollar **terms**.

Indexes apply different selection pressure for growth, maternal, carcass and fertility traits to give you the most profitable herd over the long term. Therefore an index is a composite EBV of traits best suited to a particular production system and target market.

**Southern Self-Replacing Index** : Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing straight bred Hereford herd targeting the domestic market. Daughters are retained for breeding and so maternal traits are of importance. Steers are slaughtered at 20 to 22 months of age to produce 300kg carcass with 10mm P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period.

**Northern Self-Replacing Index**: Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing straight bred Hereford herd targeting the domestic market. The index is suitable for use by both straight bred Hereford herds and in crossbreeding programs where Hereford Bulls are being used over a Bos indicus based cow herd (e.g. flatback). Daughters are retained for breeding and so maternal traits are of importance. Steers are slaughtered at 20 to 22 months of age to produce 340kg carcass with 12mm P8 fat depth. A high cost is applied for cow feed costs during the annual feed shortage period.

**Southern Baldy Maternal Index**: Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd using Hereford bulls over Bos taurus females (e.g. Angus). A portion of heifers are retained for breeding and so maternal traits are of importance. The steers are surplus heifers destined for slaughter at 20 to 22 months of age. Steers produce 300 kg carcass with 10mm P8 fat depth, while heifers produce 270kg carcass with 12 mm of P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period.

**Northern Baldy Maternal Index** :- Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd (e.g. flatback ) using Hereford Bulls over Bos indicus/Tropical females (e.g. Santa Gertrudis) where all progeny (male and female) are destined for slaughter. Steers and heifers are slaughtered at 20 to 22 months of age. Steers produce 340kg carcass with 14mm of P8 fat depth while heifers produce 300kg carcass with 17mm of P8 fat depth.

# Breedplan Explanation

## Estimated Breed Values (EBVs):

The EBV is the best estimate of an animal's genetic merit for that trait.

**Accuracy** An accuracy figure is presented with every EBV. This gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

## Birth:

**Calving Ease EBVs (%)** are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

**CE % Direct (DIR)** indicates how this animal influences the birth of its progeny.

**CE % Daughters (DTRS)** indicates how well the animal produces daughters that have easier calving.

**Gestation Length EBV (days)** is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

**Birth Weight EBV (kg)** is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

## Growth:

**Milk 200-Day Milk EBV (kg)** is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability, as it affects the 200-day weights of their calves. For dams, it indicates her milking ability.

**200-Day Growth EBV (kg)** is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

**400-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

## Fertility:

**Scrotal Size EBV (cm)** is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size.

## Carcase:

**Carcase Weight EBV (kg)** estimates the genetic differences in carcass weight at a standard age of 650 days.

**Eye Muscle Area EBV (cm<sup>2</sup>)** estimates the genetic differences in the eye muscle area at the 12<sup>th</sup>/13<sup>th</sup> rib site of a 300kg dressed carcass. More positive (+) EBVs indicate better muscling on animals.

**Rib Fat and Rump Fat EBVs (mm)** estimates the genetic differences in fat depth at the 12<sup>th</sup>/13<sup>th</sup> rib and P8 site in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

**Intra-muscular Fat EBV (%)** is an estimate of the genetic differences in the percentage of intra-muscular fat at the 12<sup>th</sup>/13<sup>th</sup> site in a 300kg carcass. Depending on market targets, larger more positive values are generally more favourable.

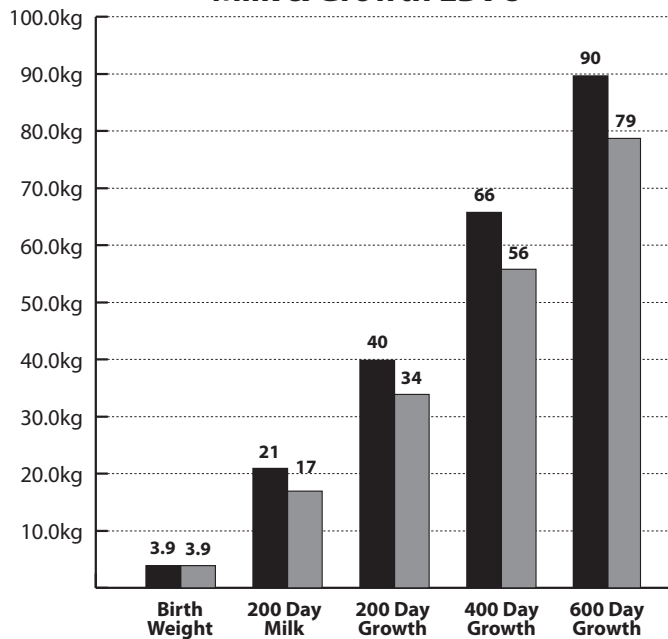

**Retail Beef Yield Percent EBV (%)** represents total (boned out) meat yield as a percentage of a 300kg dressed carcass. A more positive EBV indicates higher percentage yield for a 300kg carcass.

## Percentile Bands for 2021 Born Calves
