Vendors Checklist

STALL PLACEMENT & FITTERS

If fitters require different owner's bulls to be tied together, please notify Brooke Rayner 0427474 804 or email grathlyn@gmail.com or Andrew Rayner by phoning 6373 8677 or 0429 820 223 by 18th May 2023

NECKTIES

The vendor of any animal that requires re-tying during or after the show will be charged a \$50 fine (plus the cost of the necktie). After the sale is completed, all bulls left for the buyer or their transport agent, **MUST** be fitted and tied with a necktie as well as the halter. This is the responsibility of the vendor. Failure to pay the fine will result in refusal of your entries in future years.

INSPECTIONS

All inspections will be held Monday 4th June 2023 **ONLY** from 9am to 11am. At this time the completed Vendor Declaration and Herd Health Declaration forms must be submitted in order for inspection to be completed. Additional copies of these forms can be obtained by contacting HAL on 02 6772 1399.

COMPULSORY UNIFORM

All people leading bulls in the ring must wear the compulsory breed uniform

ADVERTISING

No advertising is to be displayed for stud sponsors unless the sponsor is also an official sponsor of the Herefords Australia National Show and Sale (Dubbo) 2023. This includes promotional clothing.

BULL ARRIVALS

Strictly no bulls are permitted to arrive at the Dubbo Showground prior to the morning of Saturday 3rd June 2023 without prior approval.

PRESSURE CLEANERS

No pressure cleaners of any sort to be used on the wash bays.

ALL LOTS REGISTERED WITH HEREFORDS AUSTRALIA

Buyer Assurance

All bulls offered for sale in this catalogue have passed the following Quality Assurance measures:

- ☑ Independent Vet Inspection for structural & reproductive soundness.
- ☑ Semen Test to meet Australian Cattle Veterinarians Standard for natural service. Test results are available for inspection from the vendors or at the agents' office in the Sales Complex.
- ☑ Tested PI negative.
- ☑ Vendors Guarantee.
- ☑ All bulls catalogued have been sire verified using DNA and have been tested free of the following Genetic conditions - hypotrichosis, dilutor, idiopathic epilepsy, maple syrup urine disease.

Explanatory Notes for Horned Status of Animals

Please note that as per the Regulations of Herefords Australia Ltd.

“Description of Animals”

Polled, Horned, Scurred or H# animals shall be eligible for registration; and the letter P, H, S or H# shall be shown in the Company's records and on the Registration Certificate, as the recorded phenotype as provided by the breeder at the time of registration.

Any animal that has been DNA tested for Poll/Horn status and is found to be homozygous polled will automatically receive PP as a horn status:

(PP) – Homozygous Polled

(The animal has been DNA tested and the test result indicates that it is Homozygous Polled)

(P) – Polled

(H) – Horned

(S) – Scurred

(H#) – is a Horned animal either containing Polled genetics OR is missing a percentage of its four generation Horned pedigree

Any lots that have been tested for their Poll Gene Marker have their results printed in the catalogue. The results will show whether the bull is Homozygous (PP) or Heterozygous (PH) Polled.

A Homozygous Polled (PP) animal is a 'True Polled' animal and will only produce Polled (or Scurred) calves. They will not produce Horned calves.

A Heterozygous Polled (PH) animal carries a Polled and Horned gene and can produce Polled, Horned (or Scurred) calves.

Johne's Beef Assurance Score (J-BAS)

J-BAS is a risk profiling tool developed for use in the new approach to Johne's disease (JD) in beef cattle. The scoring system is from 0 (being 'Unmanaged risk') to 8 ('High Assurance'). Vendors of the Show and Sale are required to have a minimum of a J-BAS 6 in order to exhibit at the event. For more information please go to www.animalhealthaustralia.com.au

It is the responsibility of all potential purchasers to conduct their own due diligence regarding the Johnes disease status of the lots that they are interested in purchasing.

Herefords Australia Ltd and the Herefords Australia National Show and Sale (Dubbo) Management Committee take no responsibility for the J-BAS status of any of the listed herds or cattle.

Sire Verification and Genetic Conditions

All bulls catalogued have been sire verified using DNA and have been tested free of the following Genetic conditions - hypotrichosis, dilutor, idiopathic epilepsy, maple syrup urine disease.

FOR A SUCCESSFUL STUD STOCK BUSINESS

Our experienced and professional network, located across Australia, are dedicated to achieving the best results for your stud stock business.

Elders Stud Stock provide superior marketing packages, professional auctioneering services, as well as dedicated pre and post-sale customer support. This is backed by an extensive commercial client base throughout Australia. We work closely with stud stock breeders, providing tailored services to achieve your agribusiness goals.

Most Successful Exhibitor

Most Successful Exhibitor:

The Most Successful Exhibitor of the Show will be awarded to the Exhibitor who compiles the highest point score throughout the Show and Sale. Points will be allocated as follows:

Show Classes: 1st place 5 points 4th place 2 points
 2nd place 4 points 5th place 1 point
 3rd place 3 points

Sale Section: Bulls selling above the previous years average, rounded to the nearest \$500, will get 5 points.

NOTE: In the event of a tie, 2 points will be awarded to each Champion, providing they have been sold to an outside buyer. Points shall not be allocated for Show and Sale in the event of an animal not being sold by the exhibitor at auction.

Most Successful Exhibitor:

Sponsored by Nutrien

Top Price:

Sponsored by Elders – John Horne Memorial Trophy

AuctionsPlus[®]

Australia's Livestock Marketplace

Can't make the sale?

Purchase online in eight simple steps!

Log on to AuctionsPlus and bid on your phone, tablet or computer.

- 1 REGISTER ONLINE**
Free once off registration for all auctions.
- 2 COMPLETE BUYER INDUCTION**
The buyer induction will help you understand the roles and responsibilities of everyone on the AuctionsPlus system.
- 3 VIEW CATALOGUE**
View photos, videos, pedigrees and more.
- 4 ENTER AUCTION**
Log into the auction anytime, anywhere and bid on your mobile, tablet or computer.
- 5 AUTO BID**
Can't stay for the whole sale? Set your maximum bid on the lot that you want to purchase and let the computer bid for you.
- 6 CONTACT SELLING AGENT**
If successful, contact selling agent to arrange payment and delivery. The agent contact details will be available in the catalogue header.
- 7 PAYMENT**
Via the selling agent's terms and conditions.
- 8 DELIVERY**
Arrange transport of livestock at your expense.

Contact AuctionsPlus on (02) 9262 4222
or email studsales@auctionsplus.com.au
or www.auctionsplus.com.au

AuctionsPlus

How to Register and Bid on AuctionsPlus

1

Go to www.auctionsplus.com.au to register at least 48 hours before the sale.

2

Select “**Sign Up**” in the top right hand corner.

3

Fill out your name, mobile number, email address and create a password.

4

Go to your emails and confirm the account.

5

Return to AuctionsPlus and log in.

6

Select “**Dashboard**” and then select “**Request Approval to Buy**”.

7

Fill in buyer details and once completed go back to Dashboard.

8

Complete buyer induction module (approx. 30 minutes).

9

AuctionsPlus will email you to let you know that your account has been approved.

10

Log in on sale day and connect to auction.

11

Bid using the two-step process – unlock the bid button and bid at that price.

12

If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

Email: info@auctionsplus.com.au

NLIS APPROVED ENVIRO TAGS

100% RETENTION GUARANTEE:

ASK YOUR LOCAL RESELLER FOR
THE BEST PRICE GUARANTEE*

*Conditions Apply. See in-store for details or ask your reseller.

**LEADER PRODUCTS
NLIS ENVIRO TAGS** are
designed in Australia
specifically for today's
farming conditions.

Benefit from:

- Lifetime retention guarantee*
- Durable hard-wearing design
- Quick and easy application
- No lump or damaged chips
- Exceptional read range
- Smooth easy-clean surface

CATTLE MANAGEMENT TAGS

- For use on all livestock
- High-retention rates
- "Reinforced Strength Bars" for reliability and longevity

Breedplan made easy

Breedplan is a performance evaluation program that compares bulls “on a level playing field” for a number of important commercial traits.

The difference between a bull’s genetics and the breed benchmark for a range of traits is reported as an Estimated Breeding Value (EBV) – an estimate of how a bull will perform as a parent rather than how he looks on the day.

EBVs can be positive (+) or negative (-), ie, above or below the breed benchmark of zero.

EBVs are calculated from the available performance information on the animal, its parents, progeny and its close relatives within the breed.

The information is adjusted for age, dam age, and for differences between herds, years, season of calving, management effects and for mating and selection biases. The heritability of the trait is also taken into account.

EBVs – what do they tell me about a bull

BIRTH

Birth Weight: The Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

FERTILITY

Scrotal Size: The Scrotal Size EBV (cm) is an indicator of male fertility. Higher (positive) EBVs indicate higher fertility. Higher SS EBVs are also positively associated with female fertility through earlier age of puberty.

GROWTH

Milk: 200-Day Milk EBV (kg) is an estimate of the contribution that a dam makes to the 200 day weight of her progeny. For sires, this is an indication of the contribution that his daughters will make to the 200 day weight of their calves.

200-Day Growth: The 200-Day EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal’s genetic merit for growth to early ages (ie. 8-10 months).

400-Day Weight: The 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal’s genetic merit for yearling weight.

600-Day Weight: The 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal’s genetic merit for growth beyond yearling age.

CARCASE

Eye Muscle Area: The EMA EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate better muscling on animals.

Rib Fat: The Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Rump Fat: The Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Intramuscular Fat Percent: The IMF% EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcass. More positive EBVs indicate higher marbling.

EBVs on sale cards displayed on sale day may vary from those published in this catalogue.

Hereford group breedplan data:

1. Minimum Requirements

Bulls appearing in this catalogue are required to have current reportable Group Breedplan EBV’s for 200, 400 and 600 day weights, fat depth (rib and rump), eye muscle area and intramuscular fat.

2. Traits Observed

The Breedplan data for each lot in this catalogue carries a “Traits Observed” indicator. This identifies those traits for which the animal has been directly measured and the animal’s measurement has been included in the BREEDPLAN analysis. Where an animal has not been observed for a trait, the EBVs have been calculated from measurements on other related traits and the performance of the animal’s relatives.

Breedplan accuracy

What is Accuracy?

By definition, an EBV is an estimate of an animal's true breeding value. The "accuracy" figure produced with each EBV provides a measure of the stability of the EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal, its progeny or its relatives.

Accuracy figures are reported as a percentage (%) between 0 – 99, with higher accuracy values indicating that more information has been used in the calculation of the EBV than a lower accuracy value.

How do I interpret Accuracy?

The following guide may be useful for interpreting accuracy:

Less than 50% accuracy - the EBVs are preliminary. EBVs in this range will have been calculated based on very little information. These EBVs could change substantially as more direct performance information becomes available on the animal.

50-74% accuracy - the EBVs are of medium accuracy. EBVs in this range will usually have been calculated based on the animal's own performance and some limited pedigree information.

75-90% accuracy - the EBVs are of medium-high accuracy. EBVs in this range will usually have been calculated based on the animal's own performance coupled with the performance for a small number of the animal's progeny.

More than 90% accuracy - the EBVs are a high accuracy estimate of the animal's true breeding value. It is unlikely that EBVs will change considerably with addition of more progeny data.

Although the accuracy of an EBV should be considered, animals should be compared on EBVs regardless of accuracy. Where two animals have the same EBV however, the animal with the higher accuracy would normally be used more heavily than the bull with the lower accuracy because the results can be predicted with more confidence.

Remember, all information that is known about an animal and its relatives is considered in the calculation of its EBVs. Subsequently, the EBV will be the best estimate available of an animal's genetic merit, regardless of accuracy.

TRAITS OBSERVED:

Identifies those traits for which the animal has been directly measured and the animal's measurement has been included in the BREEDPLAN analysis.

Log-on to www.herefordsaustralia.com.au for a full description and explanation of all Breedplan, EBVs, Accuracies, Selection Indexes and Comparing Animals.

Hereford selection indexes

Hereford selection indices are calculated for four production/market specifications, namely, Southern Self Replacing, Northern Self Replacing, Southern Baldy Maternal and Northern Baldy Terminal.

Each selection index describes a different production/market scenario and relates to a typical commercial herd using Hereford bulls. Producers are advised to use the selection index that most closely aligns to their production system. All four selection indexes are focussed on maintaining and improving eating quality. Significant premiums are applied for increasing marble score up to a marble score of 3. Pressure is also applied to early life growth to maintain low ossification scores and good MSA compliance. In addition, each selection index targets the following specifications.

Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system. More information is available on selecting animals using a selection index.

The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

Southern Self-Replacing Index - Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing straight bred Hereford herd targeting the domestic market. Daughters are retained for breeding and so maternal traits are of importance. Steers are slaughtered at 20 to 22 months of age to produce 300 kg carcasses with 10 mm P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period.

Northern Self-Replacing Index - Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting the domestic market. This index is suitable for use by both straight bred Hereford herds and in crossbreeding

programs where Hereford bulls are being used over a Bos indicus based cow herd (e.g. flatback). Daughters are retained for breeding and so maternal traits are of importance. Steers are slaughtered at 20 to 22 months of age to produce 340 kg carcasses with 12 mm P8 fat depth. A high cost is applied for cow feed costs during the annual feed shortage period.

Southern Baldy Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd using Hereford bulls over Bos taurus females (e.g. Angus). A portion of the heifers are retained for breeding and so maternal traits are of importance. The steers and surplus heifers are destined for slaughter at 20 to 22 months of age. Steers produce 300 kg carcasses with 10 mm of P8 fat depth, while heifers produce 270 kg carcasses with 12 mm of P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period.

Northern Baldy Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd (e.g. flatback) using Hereford bulls over Bos indicus/Tropical females (e.g. Santa Gertrudis) where all progeny (male and female) are destined for slaughter. Steers and heifers are slaughtered at 20 to 22 months of age. Steers produce 340 kg carcasses with 14 mm of P8 fat depth while heifers produce 300 kg carcasses with 17 mm of P8 fat depth.

Note that \$Index values for individual animals are sensitive to the assumptions used in the BreedObject analysis to calculate the selection index. More information is available on the weightings used in the Hereford Selection Indices.

SELECTION INDEX VALUES – BREED AVERAGES
