## 21 Bulls

# More quality beef, Less Feed

# Welcome to our 2023 NSW Sale

**At Twynam we have been in the business of producing Angus genetics, that work for the commercial cattle breeders for 31 years.**

Today our focus is on feed efficiency, marbling, structure and producing calves. And, last but not least, we expect all our animals to be well mannered.

Our stud today comes from the background of the stud 2,000 cows that produced bulls for our 20,000 commercial cows. We know what economics mean and what drives profit.

Today we don't run a commercial herd, so all our bulls end up in the market.

## Feed Efficiency

Over the last 6 years we have embarked on testing nearly all our male and female progeny. No other Angus stud has been testing for as long as us and NO stud has been testing most of their female progeny as well as the males. This also makes us very unique in the whole world. Progress is evident and we are identifying animals that are genetically proven to be superior.

## Adaptable

Although we have been a NSW based stud, our cattle are well proven in the north with some of our cows being found in Consolidated Pastoral Company's stud as donors in their ET program.

## Composite

For many years Twynam had a large commercial Santa Gertrudis herd in central and northern NSW. Unfortunately, it wasn't very fertile. To create a better animal, we started a composite program introducing Red Angus and Gelbvieh. The calves were sensational. Unfortunately, the inherent infertility was going to take a very long time to overcome, so we did a wholesale change to Angus.

Above: Colt Kahlbetzer, Johnny Kahlbetzer & Roger Stanton

Today, reflecting on what we learnt, I believe that improvements can be made to any cattle breed, so we have embarked on a composite breeding program. We are breed agnostic and believe that the industry has lost sight of many of the benefits that can be gained from Hybrid Vigour. We are in the very early stages of its development, and you will find in the catalogue some great examples of where we are heading.

## Calving Ease

There is no future if cows or calves die. We aim to supply bulls that are reliable and are confident that our animals perform in line with their EBVs.

## Bull Guarantee

We will provide a replacement bull, for any bull that becomes infertile or breaks down due to reasons other than injury or misadventure within 18 months of the sale.

In summary we are bringing you animals that will produce more quality beef for less feed with impeccable temperament, marbling and high index rankings.

**Regards, Johnny Kahlbetzer**

# NSW Feature Sires

# Angus Bulls

## Glennoch Hinman – QBGH22

An Angus Benchmarked sire. A rare animal with high IMF at 5.1 and PROVEN feed efficiency (through the Benchmarking program) with an NFI of -0.41. His other traits being are very well balanced.

## Wrigley Q81 PV- JVCQ8

A bull we purchased for his combination of IMF and NFI. Still gathering data to determine how good he may be, but things are looking promising. IMF of 4.8, NFI of -0.62 and \$GN of \$315.

## Twynam K051 SV - NXTK051

A Twynam bred bull we have used a little bit of over the years with good structure and an IMF of 5.8.

## Twynam Q11 PV - NXTQ11

A great set of EBV 's with IMF of 5.4 and \$GN at 342. He came 6th in his test for NFI.

## Twynam Q24 PV - NXTQ24

A more moderate bull that came 10th in our test. Has an NFI of -0.54

## Twynam Q69 PV - NXTQ69

A growthy bull with a 600-day growth of 145 but with a Birth weight below 5. He came 2nd in our feed efficiency test.

## VSYQ140 Ballangeich Q140 SV - VSYQ140

This sire was used over some cows we purchased. His EBVs don't stand out but we believe he is better than the numbers are showing at this stage.

## Te Mania Perfectionism P1192 SV - VTMP1192

A higher birthweight bull, who otherwise bends the curve. A son of Te Mania Kirby with an IMF of 7.5.

## Banquet Garrett G272- VONG272

An Angus Benchmarked sire. An NFI of -0.79. His IMF is only 2.1 which is surprising considering his Benchmark results. A big bull with 600 Day of 143. Birthweight is 6.4, so not for heifers-saying that we haven't had any birthing problems with his progeny.

## Twynam L96 - NXTL096

A Twynam bred, Angus Benchmarked sire. A growthy bull (158 for 600 day) with good BW (2.7) and reasonable feed efficiency (proven through the Benchmarking program). A very solid bull with good structure, still working at 8 years of age.

# Composite Bulls

## Leachman Docs Remedy

A half Angus half Euro sire. From the Leachman 2023 catalogue.-"After extensive testing and progeny data Docs Remedy has come to the forefront of our breeding program. A top 1% \$Feeder, he will sire high value steers along with productive females. He is one of the most powerful, dense, yet moderate and free moving sires in our lineup. Complete sires like him are hard to find .. but very easy to use."

## Leachman Accelerate

9 breeds in his pedigree-37% Angus, 34% Euro, 16% South Devon. Physically consistent progeny. He is moderate, balanced, thick made, wide based and gentle.

## R&R Beefmaker 116D- 87% Limousin, 7% Angus

A bull whose semen we imported from the USA for feed efficiency and who is performing well. A very growthy sire with huge EMA. He has a high BW EBV, but we have had no issues with his calves, which we attribute to the weight coming from length of the calves versus thickness.

## Twynam P99

A great looking bull with structure. There are four breeds in his pedigree being 33% Charolais, 33% Senepol, 17% Shorthorn and 17% Belmont Red.
