

96 BreedersBEST Genetics Prolific Rams

Prolific - The fine wool high fertility Maternal Composite

The Prolific is the only Maternal composite in Australia where wool quality has been a key focus selection criteria.

This year's ram sale team is averaging 23.4 micron.

NB TYPE

ET is Progeny by embryo transfer - from a donor ewe that reared twins from her mating at 7 to 8 months of age

Late Drop - Progeny dropped in July / August with majority out of a ewe lamb mated at 7 - 8 months of age.

NM - Natural Mate progeny

All Prolific lambs are DNA pedigree & Genomic tested ensuring absolute integrity of parental data.

All Prolific progeny have their raw data submitted to Sheep genetics and utilise the Maternal Carcase Plus index (MCP+) to maximise fertility and productivity.

The MCP+ index focuses on growth, carcass and reproduction traits, while aiming to maintain mature size. It also includes faecal worm egg counts. Early growth contributes most to the indexes with significant contributions from eye muscle depth, and reproduction ie number of lambs weaned from adult ewes and the number of lambs weaned from ewe lambs
