Welcome to Mount Pleasant Limousins

Wow, can you believe this year is our tenth sale!! Time has gone so fast.

Our season here at Bedgerebong is a mixed one. It started off really well, but the rain has slowed to a stop and we have had big frosts with very warm days. The cattle are finally out on the oats.

We have been very busy with the boys and their football, so we haven't attended any shows this year. Luke and Jack went to the Sydney Royal Show for a few days and had a great time catching up with many of our fellow cattle breeders. Jack and I headed back to Canberra for the 2023 Starrs Limousin National Junior Show. Jack was fortunate enough to lead a heifer for Craig and Tamara Corby. We are trying to talk Harry and Tom into missing footy for a weekend and prepare a team for the next Junior Show.

We are now seeing our first drop of Mandayen Kingmaker R65 calves hit the ground, and boy are we impressed! We will post photos on our facebook page as they grow and fill out.

At this year's annual sale we have 16 bulls on offer. 12 blacks and 4 apricots, 2 of which are HP HB, and 7 HP. This sale will include some of our first Flemington Quick Fix Q19 calves. Lot 11 was broken in last year and shown at the Junior Show, but has not been shown since. Jack (JR Limousins) has Lot 5 on offer, a Red Rock Double Sprung M50 son who is one of the HP HB bulls. Tom and Harry (T'n'H Livestock) don't have any bulls for sale this year as their Dams dropped mainly heifers which has grown their herd size quickly.

Thank you to my 4 men, even though they are busy with work, sport and after school commitment they still manage to give me a hand on the farm. Thank you to Richard for all his help over the past 12 months with the cattle and to Christine from Redgum Graphic Design and Signwriting, who creates all our ads and sale catalogue. To all my helpers on sale day, thank you I really appreciate your help!

Topped price bull will receive a product, as well as the volume buyer. I would like to thank Walkers Ag N Vet for their generosity! They are open 5 days a week for all your livestock needs.

We trust you will find bulls in this year's line that will suit your program. Should you be successful in a purchase, we hope you are as happy with them as we are.

NOTE: *At the time of catalogue print, we were waiting Sire verification for Lot 7, Lot 10, Lot 13 and parent verification for Lot 16, who we think is an embryo calf adopted by a first calver. Please check the supplementary sheet for updated sire information. This will alter page 10 Reference Sires list as well.*

Sherrie (Luke and boys)
Mount Pleasant Limousins

The logo features the words 'Mount Pleasant' in a blue script font above a blue swoosh, with the word 'Limousins' in a bold, red, sans-serif font below it.

Limousins

Sale Information

Buyer Registration

Buyers number system will be in operation at the sale. All prospective buyers must register prior to the sale. GST will be added onto the price at the fall of the hammer.

Sale Order

The Vendors reserve the right to alter the sale order.

Supplementary Sheet

Will be available on the day

Health:

- All animals have been tested for Pesti virus
- Have had 2 vaccinations of 7 in 1, Pestigard and Vibrovax
- Back lined with Eprinex on 18th August 2023
- Back lined with Coopers Easy Dose 23rd July 2023
- Vet checked and semen tested

Sale Preparation

All the bulls on offer have been prepared on a lucerne pasture with the access to a creep feeder of oats and access to mineral lick blocks. There has been no hoof trimming.

Junior Members

Junior Limousin Youth Members will be offered a 5% discount on all purchases.

Catering

Lunch and refreshments will be provided by Mount Pleasant Limousins at 12 O'clock.

Stud Transfers

All animals are registered with the Australian Limousin Breeders Society and they are eligible for transfer within. We ask all purchasers of animals who require transfers to indicate this on your "Buyers Instruction Slip" (page 31 of the catalogue).

Rebate

A 2% rebate is offered to outside agents who meet the following conditions.

1. Introduce their client in writing to the vendor by 5pm on the day prior to the sale.
2. Accompany their client at the sale.
3. Settle within 7 days.

Insurance

Purchases become the responsibility of the buyer at the fall of the hammer.

While all care will be taken by the vendors we recommend buyers insure their purchases.

An insurance representative will be present at the sale.

Delivery and Transport

We are willing to hold bulls for a reasonable period after the sale to enable purchasers to coordinate the successful and efficient transport of the bull to their properties at the buyers risk, again all care will be taken by the vendor.

NOTE: On delivery of your new bull please ensure you have some steers or cows in the yards to ease the transition from the herd at home to their new environment. The bulls have been handled gently and moved by quad bike so with any new method of handling it should be taken slowly. There is no trailer loading facilities - only trucks

Guarantee

We guarantee the structural soundness and fertility of our sale bulls. If a bull proves to be infertile or incapable of natural service within 12 months of the sale date, the vendor will credit the purchase price less the salvage value of the bull provided the problem is not caused by injury, disease, misadventure or negligence incurred since taking delivery. Any claims must be accompanied by a relevancy veterinary certificate. The vendor reserves the right to obtain an independent veterinary assessment to confirm any claim.

What are scurs?

Some polled cattle have scurs. Scurs are incompletely developed horns that are generally attached only to the skin. They can range in size small scab like growths to large horn like protrusions. Therefore, polled cattle can either be smooth polled or scurred polled (polled but expressing scurs). Many breeders mistake the idea that scurs represent an error in transmitting the horned characteristic, but this is not the case:

Scurred cattle should be classified as polled since they do have the polled gene.

Only a polled animal can have the scurred trait.

Notices

Health and Safety of Visitors

Visitors enter the yards at their own risk. Children under 16 and people with reduced mobility, or require the use of aids are requested not to enter the yards.

Under normal conditions all animals are considered to be of docile temperament, however sale day is not considered 'normal' conditions.

Sale Catalogue

All reasonable care has been taken by the vendor to ensure that the information provided in the catalogue is correct at the time of publication. However, neither the vendor nor the selling agents make any other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information included in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information

Sale Catalogue Disclaimer

All care has been taken in compiling this catalogue however responsibility lies with prospective purchasers to determine it's accuracy.

Understanding EBV's

An Estimate Breeding Value (EBV) is an estimate of the genetic merit of that animal for each trait measured.

EBVs are provided for the following traits:

Gestation Length:

Ranks sires for the time between conception and the birth of a calf. Shorter gestation is indicated by negative EBVs and longer by positive EBVs.

Calving Ease Direct:

Indicates the influence of the sire on calving ease. Sires with positive EBVs for calving ease will increase calving ease and sire with negative EBVs will decrease calving ease.

Birth Weight:

Indicates the genetic potential for birth weight. Positive EVBs indicate higher birth weights and negative EBVs indicate lower birth weights of progeny.

200, 400 & 600 Day Weight:

Gives us an estimation of the animals genetic potential for growth.

Milk:

A key component of fast growth to weaning is the dam's maternal performance. A bull with a high milk EBV should produce daughters which milk well.

Scrotal Size:

Indicates whether the bull will produce sons with above average or below average scrotal sizes.

Docility:

Is expressed as the increase or decrease in the percentage of the progeny that will be scored as docile (score 1 or 2). Positive EBVs indicate higher proportion or progeny that will be scored as docile and negative EBV's indicate a lower percentage of progeny being scored as docile.

The EBVs for Limousins can not be compared with EBVs for an animal of another breed

Accuracies are presented with each EBV and give an indication of the amount of information that has been used in the calculations of that EBV. The higher the accuracy the lower likelihood of change in the animal's EBV as more information is analysed for that animal and its relatives.

The EBV contained within this sale catalogue were compiled by the ABRI (Agricultural Business Research Institute) from the data supplied by breeders. Neither the Australian Limousin Breeders' Society or ABRI oversee or audit the collection of this data.

New Suffixes for Limousin cattle

Following considerable research and consultation with a variety of stakeholders and consideration of member feedback on proposed changes to Limousin suffixes the Board is advising members of a new suite of suffixes that will come into effect as at 1 January 2023. Please note that whilst these suffixes officially take effect as 1 January 2023 they may appear on the database prior to this date or a short time after depending on ABR's work to transition us to the new suite of suffixes. The new suffixes will be used in all of the extracts prepared for the 2023 sale catalogues.

The review of the Limousin suffixes was initiated after a number of members noted that the existing suffixes had evolved over time with technological advances and breed advancement. Their concerns were that this evolution had led to the use of a number of suffixes being used to describe the same status, e.g. 3 suffixes to describe an animal as homozygous polled, that leads to some confusion within the marketplace and hinders clear and intuitive understanding of the suffixes. It was noted by members that all methods of determining horn/poll and coat colour status had reached similar and acceptable accuracy to no longer need to differentiate in suffixes as to how the status was determined. In reviewing the Limousin suffixes the Board considered:

1. Discussions with commercial buyers/users, agents and members who expressed opinions that our existing suffixes were confusing with a number of traits being represented by more than one suffix and some suffixes being less than intuitive.
2. Reflection on the purpose and use of suffixes in relation to providing information to non-members and members in their decision-making processes when considering purchases to suit their breeding objectives.
3. A view of a growing number of members that the current suffixes have served their purpose as technology and herd status has evolved over a period of time but are now in some cases unnecessary.

The Board arrived at its position with general member consensus on the new suite of suffixes believing the proposed changes to be simple to understand and more intuitive than the current suffixes and brings us in line with or closer to many other breeds that have similar traits that suffixes are used for.

The Board emphasises that there is no intention to change information available on the Animal Enquiry page relating to how the status of the various suffix traits were determined. Full details of DNA test results would also continue to be reported as they are now. All suffix traits will be available as Animal Search filters to support members and non-members to search the Limousin database for potential animals with desired traits that may suit their breeding objectives.

The Board is appreciative of the time taken by members and non-members to provide feedback, comment and suggestions to assist the development of the new simplified and more intuitive suite of suffixes. **See Opp. page for a summary of the new Limousin suffixes and how they will appear after animal names.**

Suffixes for Limousin cattle as at 01 January 2023.

Every animal will have 3 suffixes in brackets following its name, with the exception of Lim-Flex animals that will have 4 suffixes including the LF suffix. The suffixes will appear in the following order:

- (LF if it is a Lim-Flex animal, Poll status, Coat colour, F94L gene status)

LIMOUSIN SUFFIXES			
Trait	SUFFIX	STATUS	STATUS ARRIVED AT BY Details available for individual animals on Limousin database Animal Enquiry page.
Horn status	PP	Homozygous polled	DNA test confirmed homozygous polled, or Animal is homozygous polled by pedigree as both parents are confirmed homozygous polled, or Animal is confirmed homozygous polled by progeny analysis process.
	P	Polled	DNA test confirmed heterozygous polled, or Animal is untested, information was provided by breeder.
	Ps	Polled with Scurs	Identified by details provided by breeder, or DNA test confirmed heterozygous polled and breeder information indicates animal shows scurs.
	H	Horned	DNA test confirmed horned, or Animal is untested, information was provided by breeder.
Coat colour	BB	Homozygous black	DNA test confirmed homozygous black, or Animal is homozygous black by pedigree as both parents are confirmed homozygous black, or Animal is confirmed homozygous black by progeny analysis process.
	B	Black	DNA test confirmed heterozygous black, or Animal is untested, information provided by breeder.
	R	Red	Identified by details provided by the breeder.
	A	Apricot	Identified by details provided by the breeder.
	O	Other	Identified by details provided by the breeder.
F94L gene	AA	F94L 2 copies	DNA test confirmed animal carries 2 copies of the F94L gene, or Animal carries 2 copies of the F94L gene as both parents carry 2 copies of the F94L gene.
	AC	F94L 1 copies	DNA test confirmed animal carries 1 copy of the F94L gene
	CC	F94L 0 copies	DNA test confirmed animal carries no copies of the F94L gene
	U	F94L Status unknown	Animal is untested and parent status is unknown.
Lim-Flex	LF	Lim-Flex	Animal is identified as Lim-Flex by pedigree details in line with ALBS regulations.

What is the F94L Gene?

The mutation known as F94L which has a high frequency in the Limousin breed is one of three missense mutations which does not cause a loss of function of the myostatin gene. It appears not to cause an increase in the size of the muscle fibres but does cause an increase in the number of muscle fibres. It is not associated with high levels of calving difficulty or lowered fertility and longevity.

What Are The Effects Of The Limousin Muscling Gene?

The research conducted by the Adelaide University group led by Dr Wayne Pitchford has clearly documented the effects of the Limousin muscling gene as shown below.

	Two Copies Of The Gene	Zero Copies Of The Gene	% Difference
Hat Carcase Weight	390.8kg	380.2kg	+3%
Weight Of Silverside	11.58kg	9.76kg	+19%
Eye Muscle Area	102.0 sq cm	86.1 sq cm	+19%
Retail Beef Yield	73.4%	68.1%	+8%
Shear Force Of Loin Muscle*	4.06	4.30	-6%
Shear Force Of Silverside*	3.94	4.43	-11%

* lower shear force indicates more tender beef

How Big Is The Effect If I Use A Limousin Bull Over Cows Of Another Breed?

Most Limousin bulls carry two copies of the Limousin muscling gene so each of the progeny will get one copy of the Limousin muscling gene. Animals with one copy of the gene are likely to exhibit about half the differences shown above. A Limousin cross calf is expected to have about 9.5% more silverside, 9.5% more eye muscle area 4% more retail beef yield, with a 3% increase in tenderness of the loin muscle and 5.5% more tender silverside.

AuctionsPlus

How to Register and Bid on AuctionsPlus

1

Go to www.auctionsplus.com.au to register at least 48 hours before the sale.

7

Fill in buyer details and once completed go back to Dashboard.

2

Select “**Sign Up**” in the top right hand corner.

8

Complete buyer induction module (approx. 30 minutes).

3

Fill out your name, mobile number, email address and create a password.

9

AuctionsPlus will email you to let you know that your account has been approved.

4

Go to your emails and confirm the account.

10

Log in on sale day and connect to auction.

5

Return to AuctionsPlus and log in.

11

Bid using the two-step process – unlock the bid button and bid at that price.

6

Select “**Dashboard**” and then select “**Request Approval to Buy**”.

12

If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

DAM: *information to be advised*

DAM: *information to be advised*

Notes:

Our last bull on offer; this bull is a moderate framed sire with a strong top line and is structurally correct. He has that traditional Limo punch.

NOTE: *At the time of catalogue print, we were waiting for Parent verification for this bull, we think he was adopted by a first calver from a resp cow.*
