**WILL ALSO BE AVAILABLE ON AUCTIONSPLUS**

## **FORWARD**

### ***Welcome to Talooby 2023 Spring Sale***

2022 is behind us after a tumultuous year in many respects. The October flood (biggest since 1958) has left a lasting legacy as many of our most productive paddocks turned into partial wetlands – a scenario not seen since 1953 on this scale.

The flood residue combined with the dry season has influenced my decision to not offer any females for sale this September 29<sup>th</sup>.

On a brighter note the bulls will be young (17-18months) and fit, ready for work. There will be an increased offering of Red bulls (2 year olds) having had their first vaccination for the North (tick & three day). If necessary we will hold them at Talooby for their second vaccination at no cost.

The future still looks positive despite current headwinds and recovery should commence later this year.

The U.S has record prices and extensive drought relief – a situation that will be to Australia's advantage in demand and price terms. The Australia dollar will also be a positive for exports.

U.S trip June 20 – July 11 was a massive trip, 10,000 kilometres in 20 days, 40 visits to ranches, AI Stations etc.

I was grateful to learn of the unanimous and positive reinforcement of the positive attributes of Tehama Patriarch, the highest selling ABS/USA bull over the last three years.

This bull was identified following our trip in 2018. We have yearlings here now and his first sons will be in the Autumn 2024 Sale.

The object of the trip was to find suitable AI sire for our program and catch up on latest developments in the U.S first hand.

I am pleased to say we found several bulls to use, two being T.D.DocRyan, the \$525,000 U.S top seller as TD's 2021 sale and Myers Fair 'M' Square, a high feed efficiency bull currently available in Australia.

We will monitor several other young bulls for future use.

My thanks to Dick Whale, IBMS, for organising a tremendous trip to the USA.

In conclusion I look forward to seeing many of you at the sale on September 29<sup>th</sup>.

## **GENERAL INFORMATION**

### **MANAGEMENT – BULLS**

Bulls will be in 3 mobs

#### **ALL BULLS WILL BE:**

Tested for Pestivirus

Vaccinated for Vibrio, Pesti & 7in1

Individually assessed by Dick Whale

Veterinary Inspected for soundness and fertility by W Rohr BVSV, Cudgegong Vet Services

Carcase continues to be a focus with EMA increasing while maintaining slightly positive fats for the supermarket trade, our main focus, whilst being necessary for good eating quality.

All of this combined with the independent grading by Dick Whale (I.B.M.S) have improved phenotype across the herd to the point where we now have the luxury of being able to retain GR5 or Better Heifers.

## AI SIRES OF THE SALE BULLS

### CHILTERN PARK MOE M6 – 8 SONS SELL

Moe has become an industry favourite with his outstanding Phenotype, marvellous temperament and moderate framed, high milking and low birthweight progeny. Breed plan rates calving ease as top 24%, growth top 16%, MCW below breed average, EMA top 41%, average IMF, top 1% docility \$A244 (top 9%) \$A-L \$402 (top 11%) Calves recorded to Jan 1, 2023 – 2758 in 166 herds.

### WATTLETOP Q41 – 5 SONS SELL

Top 7% low BW (1.3), EMA +9.6 – top 16% IMF top 5% - +4.6, very sound, top 12% \$A and top 30% \$A-L. Progeny are fine coated, well structured with a very useable EBV package.

### REILAND PEYMOUTH P960 – 3 SONS SELL

Top priced bull at the Reiland sale. Low birth weights (2.3) IMF top 6% @+4.5 with both indexes in top 16% (\$A233 & A-L\$392)

### MUSGRAVE 316 EXCLUSIVE

Just the one son representing Exclusive. One of the top selling AI bull in the USA – low birthweight (+3.5), good growth (+120) excellent milk and udder quality and top third (36%) indexes.

## WALKING SIRES

### TALOOBY LOCHINVAR L86 – 3 SONS SELL

Excellent calving ease with top 25% docility producing lovely daughters who will become great matrons

### TALOOBY MUGGER M19 – 5 SONS SELL

Now 7 years old with high accuracy figures – BW +2.8, moderate mature cow weight at +65, docility at top 34% EMA at 7.6 and positive fat. Daughters are showing great promise.

### TALOOBY MARQUIS M102 – 6 SONS SELL- THREE SEVEN GRADERS

“ANDY” Andy sires bulls with very excellent foot structure and grading 5 or below consistency. Has a higher birth weight than most of our sires but has flawless temperament, wonderful overall structure, excellent growth (+127) – top 30%, massive +4.1 – top 4% scrotal, top 32% NFI-F with excellent milk (+22). When mated right the results are really good.

### TALOOBY NEPTUNE N52- 3 SONS SELL

A son of the great Musgrave Big Sky. Solid growth with a little more birthweight than average. Below average NFI-F (41%) with a moderate maturity pattern. Out of a wonderful docile cow.

### TALOOBY PEERLESS P92- 2 SONS SELL

A super low birthweight bull (+1.3) and industry leading NFI-F at top 7%. A sound structured individual. One son S66 retained- top 6% NFI-F.

### TALOOBY POLKA P28- 3 SONS SELL

A moderate birthweight (+3.6) top retail beef yield (at top 14%) and excellent structure. Daughters are looking very promising. Top 35% EMA. P28 puts plenty of shape into his progeny.

## **RED SIRES**

### **WLF MERLIN 018A –5 SONS SELL**

This sire continues to impress leaving us lovely females with great versatility, beautiful skins and kind disposition. Very low birth weight (+0.5) EMA at +7.4 and top 11% for docility. Top 38% NFI-F and top 33% RBY

### **RED 6 MILE CUSTOM MADE –**

An older bull, the embryos having been collected some years ago, A blast from the past. The dam of the embryo calves T. Red Gold Y2 was a magnificent cow in any era, yielding embryos from three of four flushes at age 14 years. High RBY and great confirmation Custom Made was a high RBY bull from a highly respected Red Angus heard.

### **TALOOBY RED QUANTUM Q719-**

A lightly used son of Paringa Iron Ore, Low birthweight, good growth, top 32%, docility and excellent structure. A later maturing bull with excellent maturing traits.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

**PV:** both parents have been verified by DNA

**SV:** the sire has been verified by DNA

**DV:** the dam has been verified by DNA

**#:** DNA verification has not been conducted

**E:** DNA verification has been identified that the sire and / or dam may be possibly be incorrect, but this cannot be confirmed conclusively.

## UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

### What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcass, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

### What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

### Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcass than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

### Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

### Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

### Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcass merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

## UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Fertility	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Carcass	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
	CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
	EMA	cm <sup>2</sup>	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
Feed/Temp.	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
Structure	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate a lower score.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate a lower score.
Selection Index	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a lower score.
	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.  The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

This is information for bull buyers about the recessive genetic conditions, Arthrogyrosis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

**Putting undesirable Genetic Recessive Conditions in perspective**

All animals, including humans, carry single copies (alleles) of undesirable or "broken" genes. In single copy form, these undesirable alleles usually cause no harm to the individual.

But when animals carry 2 copies of certain undesirable or "broken" alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or "broken" genes.

Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

**What are AM, NH, CA and DD?**

AM, NH, CA and DD are all recessive conditions caused by "broken" alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

**How are the conditions inherited?**

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition.

For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as "carriers".

**What happens when carriers are mated to other animals?**

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele), and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

**How is the genetic status of animals reported?**

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on Pedigree AM free - Animal has not been tested
AM_%	_% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an "Database Search" from the Angus Australia website or looking up individual animals listed in a sale catalogue.

**Implications for Commercial Producers**

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia's Breed Development & Extension Manager on (02) 6773 4618.

**Attention Buyer**

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

**Parent Verification Suffixes**

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

- PV : both parents have been verified by DNA.
- SV : the sire has been verified by DNA.
- DV : the dam has been verified by DNA.
- # : DNA verification has not been conducted.
- E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

**Privacy Information**

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

**BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA**

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents.....

.....(name) do not consent to Angus

Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: ..... Signature: .....

Date: .....

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au
