

MOUNT RONAN

WHITE SUFFOLKS & MATERNALS

Specialising in the breeding of elite quality prime rams

TWENTY SIXTH ANNUAL
RAM SALE

Tuesday 26th September 2023

On-property at York

Commencing at 1.00pm

Inspections from 11.00am

BBQ lunch and refreshments provided

110 MATERNAL RAMS 110
70 WHITE SUFFOLK RAMS 70

SPECIALLY SELECTED FLOCK RAMS

ACCREDITED BRUCELLOSIS FREE FLOCK No. OV/AC/044

Typical Mount Ronan Spring Sale rams

....world class profit genetics in an athletic package.

"The profitability of our producers' prime lamb enterprises is the key to the future of Mount Ronan."

WELCOME TO MOUNT RONAN.....

There are many sheep producers, particularly in WA, who must be questioning the relevance of the sheep industry to their farming enterprises. One thing we know for certain is that things will turn around..... our customers still want sheep meat.... they just need to be able to readily afford it as before.

The downturn in the World economy is the main culprit. An upturn may not be too far away, and that would see an uplift in industry prospects. Producers need to remember that the purchase of quality rams now should be a five year investment, at least.

A highlight of this year is the commencement of a Sire Progeny meat eating quality and other production traits trial for our Maternal sheep. The genetic linkage between Mount Ronan Maternals and other sheep flocks recorded in the commercial maternal dataset is not particularly strong. We want to improve the accuracy of estimation for eating quality and production traits for our Maternals relative to others in that dataset.

Consequently we have invested in an MLA and Animal Genetics and Breeding Unit (AGBU)-approved satellite flock program. Semen from 11 Mount Ronan sires and two outside link sires were used to artificially inseminate an even line of 240 same-aged Mount Ronan commercial ewes in New South Wales. The lambs have been tagged, birth weighed and birth typed. Later on, they were DNA tested, for positive identification to their sires, and will be slaughtered on the same day at a nominated processing facility.

The carcasses will be viascanned, and then loin samples from each lamb will be taken for comprehensive testing at the University of New England.

Stay tuned for further feedback.

As usual, we have received wonderful, positive feedback from our producers. We anticipate this year's offering will uphold the Mount Ronan tradition of a long and active working life in the production of progeny with profit-maximising traits.

Good luck with purchases.

Lambs from the Sire Progeny meat eating quality and other production traits trial being conducted in NSW this year. This group includes single, twin, triplet and some quad born lambs.

Signing up with AuctionsPlus - www.auctionsplus.com.au

Please register 24 to 48 hours before the start of the sale.

1. Go to the home page and click 'sign up'

2. Fill out the required information to create an account. A confirmation email will be sent to your email inbox, which will need to be actioned.
3. Once you have created an account and confirmed your email, you then need to upgrade to a buyer on the system
 - a. Once logged in go to your dashboard
 - b. From your dashboard click on the green button "request approval to buy"
 - c. Enter your details, like PIC, Trading Name & Property Address
 - d. Complete the buyer training – this can take up to 30 mins

4. Once your buyer training has been completed, the AuctionsPlus office will be notified and will approve your request.
5. An email will be sent to you once it has all been approved.

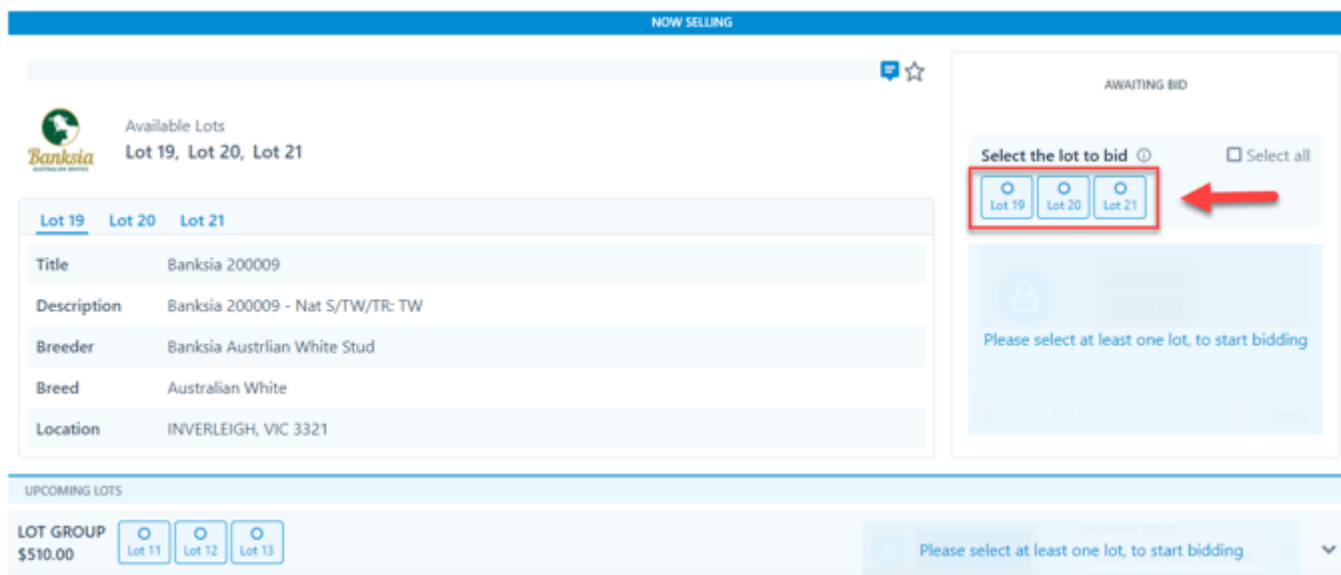

AuctionsPlus "PICK OF THE PEN" Bidding – this year's auction will run with the following format.

Importantly, in order to bid in the sale, buyers need to be registered with AuctionsPlus as a buyer.

The sale will be run in conjunction with a live sale, with two lots being offered at a time. Please bid early to avoid late bids.

On sale day, once connected to the auction as a registered bidder, the screen will display similar to the image shown below. This will show the individual lots which are available within the current pen or run being offered for sale. **(MOUNT RONAN sale is offering two lots at a time)**

To operate on the current offering, you must select a minimum of one (1) lot and then the ability to bid will open for you to commence bidding.

The screenshot displays the AuctionsPlus bidding interface. At the top, a blue bar indicates "NOW SELLING". Below this, the "Available Lots" section shows "Lot 19, Lot 20, Lot 21" under the "Banksia" logo. A table lists the details for Lot 19:

Lot 19	Lot 20	Lot 21
Title	Banksia 200009	
Description	Banksia 200009 - Nat S/TW/TR: TW	
Breeder	Banksia Australian White Stud	
Breed	Australian White	
Location	INVERLEIGH, VIC 3321	

Below the table, the "UPCOMING LOTS" section shows "LOT GROUP \$510.00" with buttons for "Lot 11", "Lot 12", and "Lot 13". On the right, the "AWAITING BID" panel shows "Select the lot to bid" with radio buttons for "Lot 19", "Lot 20", and "Lot 21", and a "Select all" checkbox. A red arrow points to the "Lot 19" button. Below this, a message says "Please select at least one lot, to start bidding" with "Cancel" and "Apply" buttons.

As the highest bidder at the fall of the hammer, you will be asked to confirm your selection from those available in a 5 second time period. Consequently, it is in your best interest to finalise your pen selection prior to bidding.

As the winner of the bid, you will be able to nominate the purchase of one or both the lots (each lot for the price bid). If you only select one of the lots, the remaining lot will then be auctioned again.

MOUNT RONAN GENETICS.....

.....DRIVING PROFIT!!!!

"We like the Mount Ronan sheep. They are everything we are chasing. The thing I like the most is their carcass type.

Despite the fact that a lot of work has been put into their maternal characteristics they still have very good carcass attributes.

The ewes produce very uniform lines of lambs with very well-muscled carcasses which yield really well. Their fat scores just seem to drop into the grid wherever you put them.

We turn off top-end supermarket lambs in the 2-3 scores. We take them out to heavy export weights around 32 kilograms and they are mostly 3-4 scores.

After more than 55 years of selection for resilience at Mount Ronan the ewes have the ability to do in tough conditions and keep bouncing back. That strong constitution is what you get in the Mount Ronan sheep.

Three years ago mature ewes scanned 194.3% after three years of drought and in 2021 they scanned 211.2% and hoggets 194.7%.

In 2022 adult ewes scanned 206% and hoggets 200.6% and no ewes received any supplementary feeding." This year 3444 adult ewes (including 907 hoggets) scanned 202.8%.

Andrew Hunter, Hills Park, Yerong Creek, NSW.

"Mount Ronan White Suffolks and Maternals are wonderful sheep. If you are looking for "bang for buck" and wanting maximum kilograms of lamb per hectare, then don't bother looking anywhere else."

Justy Fleay, Redgum Hills, Kojonup, WA.

"I think a massive advantage of these Maternals is their mothering ability. I see them physically counting their lambs, they are great milkers and they stamp their hooves at the dogs. The lambs have wonderful doing ability and are quicker maturing.

One of the main advantages is when I sell export lambs they are not bubbling with fat.

They make your mouth water just looking at them. They are very heavy but their leanness is very good."

Owen Blake, Tandari Pastoral, Harefield, NSW.

"We have been purchasing Mount Ronan Maternal and White Suffolk rams for the past three years with the view of creating a self-replacing meat flock which is sustainable and profitable.

I'm pleased with the results so far, particularly the mothering nature of the ewes and how protective they are of their lambs.

The lambs finish off well and the ewes also have good doing ability and fertility to return back in lamb.

Overall the sheep are a very well-balanced breed."

Ben Robilliard, Robilliard Ag, Old Junee, NSW.

New genetics - White Suffolks

We used a White Suffolk sire, FARRER 190111, in our artificial insemination program for the 2022 lambing. This ram has profound growth, exceptional worm resistance and eating quality genetics. We have used three of his sons for the 2023 lambing, and other sons are catalogued in this spring sale offering. Twin brothers are being offered in Lots 113 and 114. Lot 114 is particularly exceptional and probably should have been retained for our breeding program.

Other top artificial insemination sires represented are FELIX 200895 and LANGLEY HEIGHTS 180231. FELIX 200895 has low birthweight genetics, outstanding lambing ease, wonderful growth and muscling, high worm resistance, and excellent eating quality genetics. We used a top son for the 2023 lambing and his triplet brother is being offered in Lot 119.

LANGLEY HEIGHTS 180231 has low birth weight genetics coupled with strong growth and excellent muscling and eating quality genetics. We used a top son for the 2023 lambing and his twin brother is being offered in Lot 156.

New genetics - Maternals

We used maternal sire CLOVEN HILLS 180416, in our artificial insemination program for the 2022 lambing, to improve genetic linkage, as many other flocks in the Composite Maternal dataset are currently using CLOVEN HILLS genetics. These sheep are very different to the classic MOUNT RONAN carcass and wool type; however we used one son of CLOVEN HILLS 180416 to further enhance genetic linkage. Other sons of CLOVEN HILLS 180416 are included in the Spring sale offering.

We have also used for a second time, the Merino ram TRIGGER VALE 180576, because of the wonderful combination of carcass and production characteristics together with better wool quality. We are thrilled with the progress we have made with our "downstream" Merino-infused genetics. We are now seeing sheep with wonderful growth and carcass attributes which are carrying softer, more stylish wool, and still maintaining those MOUNT RONAN attributes of fertility, resilience, quiet temperament and wonderful mothering ability.

Not only are these refined MOUNT RONAN Maternals ideal for softening wool in composite maternal flocks, they are also ideal for mating with pure Merinos to enhance carcass quality in offspring, whilst retaining wool quality.

Maternal ewe with triplet lambs, at Mount Ronan, 8th September 2023.

Insurance Disclaimer

Stud Animals are not covered by commercial livestock insurance.

Insurance risk of stud animals sold at auction transfers to the purchaser at the fall of the hammer, including animals remaining on the vendor's property.

Purchasers therefore are advised to insure their animals at the completion of the sale.

Please note:

Mount Ronan stipulates that all rams which are to be registered and transferred into stud flocks will require a total payment of \$3000 (excluding GST).

If rams are purchased at the auction for less than \$3000 and the buyer wishes to have the rams transferred and registered for stud use, then the purchaser will be required to make up the difference between the purchased price and \$3000 (plus GST) before the transfer and registration can take place.

Semen marketing rights & collection:

Mount Ronan reserves the right to collect semen for our own use from any rams offered in the catalogue. Collection will be at Mount Ronan's expense and at the convenience of the purchaser.

Mount Ronan retains exclusive semen marketing rights for all rams offered in the catalogue.

The accuracies of most of the ASBVs are extremely high because Mount Ronan has measured so many sheep on LAMBPLANand

It is the wonderful balance between growth and muscling, and the outstanding resilience of the Mount Ronan sheep genotype which sets them apart from the rest.

Understanding LAMBPLAN Maternal ASBVs

Rams with a more positive weaning weight (WWT) will, on average, produce lambs that grow quicker to weaning. This ram will produce lambs that are, on average, 0.4kg heavier than a ram with a 0 ASBV for WWT.

Rams with more positive ASBVs for post weaning weight (PWT) produce lambs that grow quicker and reach target weights in a shorter time. This ram will produce lambs that are, on average, 1.25kg heavier than a ram with a 0 ASBV for PWT.

Rams with more positive ASBVs for eye muscle depth (EMD) produce lambs that have a higher lean meat yield. This ram will produce lambs that have a 0.2mm deeper eye muscle than a ram with a 0 EMD ASBV.

Rams with a higher clean fleece weight (CFW) ASBV will produce progeny that cut more wool. This ram will produce progeny that, on average, cut 2.5% more wool than a ram with an ASBV of 0.

Worm egg count (WEC) ASBVs estimate an animal's genetic potential for resisting worm burdens. Lower WEC ASBVs are desirable. This ram will, on average, sire progeny that have 10% fewer eggs/gram than a ram with an ASBV of 0.

Trait	WWT (kg)	MWT (kg)	PWT (kg)	FAT (mm)	EMD (mm)	NLW (%)	CFW (%)	SC (cm)	WEC (%)	INDEX
ASBV	0.8	1.0	2.5	-0.4	0.4	4	5	0.6	-10	105.6
Acc	51	53	61	45	38	33	37	44	37	

Rams with more positive ASBVs for maternal weaning weight (MWT) will produce daughters which will wean heavier lambs. This ASBV reflects a combination of the daughter's ability to milk and provide a better maternal environment.

Rams with a more negative ASBV for fat will produce lambs that are leaner, at the same weight. This ram will produce lambs that are, on average, 0.2mm leaner at the GR site when compared to a ram with a FAT ASBV of 0.

Rams with a more positive number of lambs weaned (NLW) ASBV will sire daughters that wean a higher percentage of lambs. This ram with an ASBV of 4 will sire daughters which, on average, will wean 2% more lambs.

Rams with higher scrotal circumference (SC) ASBVs will sire daughters that are, on average, more fertile.

An index is a guide to the value of a ram for a particular market. Rams with higher indexes will produce lambs that are more suited to that particular breeding objective. In many cases the indexes used for maternal breeds are in \$ terms.

• An ASBV of 0 is the average of the 1990 drop.

• Note: A useful rule of thumb for converting ram ASBVs into lamb production differences is to simply halve the ASBV (as rams contribute half the genetics of the lamb).

• Accuracy - published as a percentage, is a reflection of the amount of effective information that is available to calculate the ASBV. All ASBVs are now published with accuracies. The higher the percentage, the closer the ASBV is to the true breeding value of the animal. Breeding values without accuracies are Flock Breeding Values (FBVs) and can only be compared within the flock.

PREFERED LAMBPLAN INDICES for Maternals

(For more detailed information about ASBVs, go to the following website:

<https://www.sheepgenetics.org.au/getting-started/asbvs-and-indexes/>)

For our **MATERNAL CATALOGUE**, we prefer the **Maternal Carcase Plus** index (**MCP+**), as we believe it will generate a more profitable self-replacing lamb production system for producers. The **MCP+** index rewards a capped adult weight, increased early growth rate, increased eye muscle depth, better worm resistance and improving fertility. It only slightly rewards increasing clean fleece weight.

When selecting rams for breeding programs, buyers need to pay special attention to the ASBV's in order to choose the most appropriate ram for their individual enterprise. Indices are simply a guide for selection.

ADULT WEIGHT (AWT) ASBV

We are including the adult weight ASBV (AWT) in sale catalogues, because we have been weighing our sheep at 12 months of age for quite a few years now. In addition, collecting ewe weights annually at time of mating has built up a comprehensive weight profile behind our flock breeding data.

We are positively selecting for sheep with an early maturity pattern and a more moderate adult weight. This particularly applies to our Maternal sheep.

We do not want to breed sheep which have a genetically large adult size as these types of sheep require much more feed and are much less efficient from a feed conversion and profitability perspective.

WEANING RATE (WR), LITTER SIZE (LS) and EWE REARING ABILITY (ERA) ASBVs

The primary reproduction trait in the past for Maternal sheep was number of lambs weaned (NLW). **Since 1 May, 2022, number of lambs weaned (NLW) has been discontinued and replaced with a new trait, weaning rate (WR).**

We have had access to the new component traits of reproduction for a while now (conception CON, litter size LS, ewe rearing ability ERA), and NLW was not based around the component traits. The new WR trait has been developed to incorporate conception, litter size and ewe rearing ability into one ASBV.

Weaning rate is defined as the number of lambs weaned per ewe joined, and is expressed in the units of 'lambs', similar to the component traits. As an example, consider two rams, one with a WR ASBV of 0, and the other with a WR of 0.2. As rams make up half the genetic merit of their progeny, the ram with a WR of 0.2 will have daughters who on average wean 0.1 more lambs per ewe joined, than the daughters of a ram with a WR of 0.

Mount Ronan sheep perform exceptionally well for ewe rearing ability (ERA). This is the focus of our breeding program.

Mount Ronan genetics have clearly produced unparalleled prime lamb performance. Flock fertility is more than adequate, with pregnancy scanning results over 200% a readily achievable goal. The ewe rearing ability of Mount Ronan genetics allows producers to achieve outstanding weaning percentages.

Our breeding program is focussed on the development of genetics which can successfully rear high percentages of lambs with wonderful carcase weights and dressing percentages.

It is not a rabbit breeding program, and consequently we are not chasing after super-high litter sizes for obvious reasons. Selection emphasis on litter size (LS) will produce an increase in weaning rate, but is more likely to result in a higher percentage of triplet and quad births with resulting negative consequences, both from an economic and management perspective.

All Maternal sale rams will have the ASBVs for component traits LS and ERA, as well as WR provided in the sale catalogue.

LAMBPLAN'S TRAIT LEADERS

Many of our White Suffolk and Maternal sale rams are trait leaders. In other words, they are in the top 10% of the LAMBPLAN database for growth, leanness, muscling, or a combination of these traits. They are in the top 10% of all the rams of all terminal and commercial maternal breeds measured in the LAMBPLAN program in 2022 in Australia and New Zealand.

Trait leaders are noted in the comments for each ram and boxes are shaded to make them more visible.

SIRE:	TRIGGER VALE 180576		DAM:	MR 180031	SOD:	GATES 140069	

A Maternal artificial insemination son of Merino ram TRIGGER VALE 180576. A very interesting ram. Top of Merinotech Index for young Maternal rams at Mount Ronan for the 2020 drop. Has well-structured black hooves and predominantly breeds that way. Beautiful stylish wool and fleece weight genetics for an interbreed sheep.

MATERNAL SIRE REFERENCE

(With ASBVs as at 1/09/2023)

SIRE:	TRIGGER VALE 160058		DAM:	TRIGGER VALE 150918	SOD:	TRIGGER VALE 807300	

A specially selected Merino sire, which was reused for the 2023 lambing due to the superb ewe rearing ability (ERA) of daughter progeny.

Mated to specially selected Maternal ewes in an artificial insemination program. ASBVs have been affected by lack of linkage at this early stage, but progeny are impressive from a carcass and wool perspective.

Understanding LAMBPLAN ASBVs

Rams with lower ASBVs for birth weight (BWT) produce lambs with lower birth weight. Both low (lamb survival) and high (lambing difficulties) birth weights should be avoided.

Rams with more positive ASBVs for post weaning weight (PWT) produce lambs that grow quicker and reach target weights in a shorter time. This ram will produce lambs that are, on average, 3kg heavier at post weaning age (7.5 months) than a ram with an ASBV of 0.

Worm egg count (WEC) ASBVs estimate an animal's genetic potential for worm burdens. Lower WEC ASBVs are desirable. This ram will, on average, sire progeny that will have 5% fewer eggs/gram than a ram with an ASBV of 0.

Trait	BWT (kg)	WWT (kg)	PWT (kg)	PFAT (mm)	PEMD (mm)	WEC (%)	INDEX
ASBV	0.3	4	6.0	-1.5	1.0	-10	150
Acc	43	63	71	59	69	37	

Rams with a more positive ASBV for weaning weight (WWT) will, on average, produce lambs that grow quicker to weaning. This ram will produce lambs that are 2kg heavier than a ram with a 0 ASBV for WWT.

Rams with a more negative ASBV for post weaning fat (PFAT) will produce lambs that are leaner, at the same weight. This ram will produce lambs that are, on average, 0.75mm leaner at the GR site when compared to a ram with a FAT ASBV of 0.

Rams with more positive ASBVs for post weaning eye muscle depth (PEMD) produce lambs that have more muscle, independent of weight, and a higher lean meat yield. This ram will produce lambs that have, on average, a 0.5mm deeper eye muscle than a ram with a 0 EMD ASBV.

An index is a guide to the value of a ram for a particular market. Rams with higher indexes will produce lambs that are more suited to that particular market target. It is important to understand what market the index applies to before using an index.

- An ASBV of 0 is the average of the 1990 drop. It is important to compare ASBVs against current industry average.
- Note: A useful rule of thumb for converting ram ASBVs into lamb production differences is to simply halve the ASBV (as rams contribute half the genetics of the lamb).
- Accuracy - published as a percentage, is a reflection of the amount of effective information that is available to calculate the ASBV. All ASBVs are now published with accuracies. The higher the percentage, the closer the ASBV is to the true breeding value of the animal. Breeding values without accuracies are Flock Breeding Values (FBVs) and can only be compared within the flock.
- MLA acknowledges the contributions of the Australian Government and AWI in the development of this publication.

Understanding Carcass and Eating Quality Traits

Sheep Genetics report ASBVs for a number of carcass traits, including eating quality traits that can be estimated through using genomic information (DNA samples). As eating quality becomes increasingly important to consumers, it is important that we balance both carcass traits and eating quality traits in our breeding programs.

PREFERRED LAMBPLAN INDICES for White Suffolks

(For more detailed information about ASBVs, go to the following website:
<https://www.sheepgenetics.org.au/getting-started/asbvs-and-indexes/>)

For our **WHITE SUFFOLK CATALOGUE** we are listing **Lamb Eating Quality (LEQ)** and **Terminal Carcase Production (TCP)** index for each ram.

We use the **Lamb Eating Quality (LEQ)** index for our breeding flock selection because we consider it to be the most appropriate for our breeding goals.

The **Lamb Eating Quality (LEQ)** index is for a prime lamb operation where terminal sires are joined to ewes of a Merino/maternal base or crossbred ewes in high rainfall and/or high input management systems where internal parasites may cause significant economic losses.

Producers who select this index are interested in improving the eating quality of their lambs to a greater degree than is possible with the TCP index. Growth and carcase traits will still improve, and inclusion of worm egg count will aid in control of internal parasites.

Typical trait changes for the LEQ index include:

- increasing post weaning weight
- increasing eye muscle depth
- maintaining/small reduction in carcase fat
- increasing dressing percentage
- increasing lean meat yield
- large improvement in eating quality
- increasing resistance to worms.

Sheep with better eating quality will have higher ASBVs for intramuscular fat (more marbling) and lower ASBVs for shear force (better tenderness).

The **Terminal Carcase Production (TCP)** index is for a prime lamb production system where terminal sires are joined to ewes of a Merino/maternal breed or cross. The TCP index focuses on increasing weight and muscle while reducing carcase fat.

These are changes which contribute to higher lean meat yield. TCP also has emphasis on modest improvements in eating quality.

Typical trait changes for the TCP index include:

- increasing post weaning weight
- increasing carcase eye muscle depth
- decreasing carcase fat depth
- increasing dressing percentage
- increasing lean meat yield
- slightly improving eating quality

Sheep with better eating quality will have higher ASBVs for intramuscular fat (more marbling) and lower ASBVs for shear force (better tenderness).

INTRAMUSCULAR FAT (IMF) ASBV

This is a measure of the chemical fat percentage in the loin muscle of a lamb and is often referred to as marbling. IMF has been shown to have a significant impact on the flavour, juiciness, tenderness and overall likeability of lamb.

Rams with more positive Intramuscular Fat (IMF) ASBVs produce progeny with higher levels of intramuscular fat.

SHEAR FORCE FIVE DAYS (SHRF5) ASBV

Shear force is a measure of the force or energy required to cut through the loin muscle of lamb after 5 days of ageing. The ASBV is reported in deviations of kilograms of force.

Rams with more negative SHRF5 ASBVs produce lambs with more tender meat.

LEAN MEAT YIELD (LMY) ASBV

Rams with more positive Lean Meat Yield (LMY) ASBVs produce lambs that have a higher Lean Meat Yield percentage at slaughter. Lean meat yield is expressed as a percentage of the initial Hot Standard Carcase Weight after all bone and salvage fat is removed.

A ram with an ASBV of 2.4 will produce progeny that are 1.2 percent higher than progeny of a ram with an ASBV of 0.

LAMBING EASE DIRECT (LE DIR) ASBV

Previously none of the Terminal indexes contain birth weight, and as a result a lot of the higher indexing animals (with high growth traits) are high for birth weight. From 1 May lambing ease has been included in all Terminal indexes (TCP, EQ, LEQ) to assist in managing birth weight.

For flocks not directly recording lambing ease, lambing ease ASBVs will be influenced by correlated traits including birth weight and gestation length, but will be of lower accuracy than flocks who are recording the trait directly. It is important that buyers are aware if their breeder has been directly recording lambing ease, as this is the best way to get accurate ASBVs and indexes.

FROM SGA website:

UNDERSTANDING LAMBING EASE ASBVs Lambing ease has an obvious impact on the profitability of a flock. As lambing ease decreases, ewe and lamb mortality increases, which also increases additional labour requirements and veterinary expense.

Lambing Ease Direct (LE_DIR) LE DIR ASBVs are estimates of genetic differences in the ability of a sire's lambs to be born unassisted. LE_DIR is reported as the percentage difference in unassisted lambings. Higher, more positive, LE_DIR ASBVs are more favourable. For example, a ram with an ASBV of +5.0% would be expected, on average, to produce 3% fewer difficult lambings than a ram with an ASBV of -1.0% (6% difference between the sires, then halved as they only contribute half the genetics).

Mount Ronan has been recording and submitting lambing ease data to Sheep Genetics since 2009 (possibly longer but that's as far back as the report goes).

Very few flocks have been recording this data, so their accuracies for this trait will be very low.

All White Suffolk sale rams will have LE_DIR (lambing ease direct) ASBVs provided in the sale catalogue.

Extended Bowen Family – “Team Mount Ronan”

Joanne and Guy visited Ireland...to trace the Bowen convict descendant.

Bailey loves his Granddad.

April came from the Netherlands for her 4th visit in 10 years.

Granddad, Amelia, Bailey and Madison – burying Reg the dog’s cross.

Declan skillfully using a dingo to clean out the yards and sale shed.

Elise and Mark, who live in NSW.

Caught up with our German friend Sabina while we were in Kildare, Ireland.

The whole family gathered to celebrate Guy’s 70th Birthday. Not often that we are all together.

Hannah in Norway earlier in the year.

Hannah brought Brendan for a visit to the farm recently.

Kirby, Liam and the children. Children have grown since this photo was taken.

Amelia and Madison at their school sports day.
