Stud Stock GDL

Do it simply. Do it well.

Ruralco agents sell more cattle than any other agency in Queensland. GDL Stud Stock services our large client base of breeders. Harvey, Mark and Peter have the expertise, knowledge and integrity to provide the very best customer service to stud and commercial cattle breeders. We offer stud breeders a fresh and dynamic service to market their genetics. We advise buyers on selecting the best cattle to meet their requirements. **More and more breeders are using us — are you?**

Supported by 15 GDL Branches serviced by a dedicated team of local livestock agents in Blackall, Cunnamulla, Dalby, Goondiwindi, Kingaroy, Longreach, Meandarra, Miles, Mitchell, Moura, Quilpie, Roma, St George, Taroom and Wandoan.

Supported by Ruralco "Our national strength is the best local service" with over 500 outlets across Australia, each operating under it's own brand, with it's own culture, service model and unique value proposition.

Stud Stock GDL... Trait leaders for growth, performance and commitment.

And much More...!

Welcome to the Burenda Angus Annual Roma Bull Sale

A spectacular offering of 124 well grown good Angus bulls will be offered for our eighth Annual Roma Sale. The presentation of these bulls comprise of 83 2 year olds and 41 18 month old. Genetically these bulls represent some of Queensland's best bulls on offer with progeny by some of Australia's best AI sires together with several outstanding Burenda sires. 113 of the 124 catalogued Angus bulls are better than breed average for Angus Breeding, Domestic, Heavy Grain and Heavy Grass. The number of bulls in the top 20% for each Market Index are 70 for Angus breeding, 66 for Domestic, 57 for Heavy Grain and 71 for Heavy Grass. For your convenience we have shaded the EBV's of each sale lot in the top 10% blue and top 20% yellow. These bulls are bred in Queensland conditions and come with a full 2 year fertility guarantee which is detailed in the sale information pages in this catalogue.

Like last year's sires we have been particularly impressed again with the improvements in the doing ability of the bulls. The bulls with the better rib and rump fat levels have performed the best and we feel this is important as feedback had indicated that in certain environmental conditions such as wetter than normal years and drier years that it was difficult to maintain good herd fertility and achieve the minimum fat specifications for grass fed product. Currently we are working on lifting our eye muscle area and intramuscular fat levels as these two carcass traits play a major role in the feedlot industry. We feel that a good run of these sale bulls possess this easier doing ability, improved carcass traits and quality calving genes that we have been working towards. With the failure of our oats crop and it being particularly dry for most of the bull's life we have had to supplement them more than normal with a silage based ration with barley hay and molasses leading up to this year's sale.

We are currently running around 800 registered Angus breeders, 70 commercial Angus cows and 140 registered Brangus females. Over the last 12 years we have made good gains on fertility and progeny performance by being tough on fertility and temperament. Both of these traits are directly related to performance in the herd and there is no doubt the Burenda herd has benefited by the high standards we set ourselves for these two traits. The Burenda females are AI'd once and have only 6 - 8 weeks joining followed by pregnancy testing 40 days after bull removal. Empty females are fattened and sold direct to works.

We have again included the actual calving interval or ACI in our catalogue comments for those that use this information. Most lots have good ACI's of around 365 days. There are also others marked as Donor (AI ET) and 365/recipient. The recipient means his dam has had both natural and embryo calves. Around 80% of our females are 6 years and younger as we find these cows have the

improvements of fertility, calving ease, growth, and carcass data that we are looking for. Our improvement in EBV's has been very noticeable in both our cows and the 2016 sale bulls. The combination of improvements in the fertility, EBV's and raw data performance within the Burenda herd has led to improved profitability through attention to these genetics. The Burenda females are run as if they were a commercial beef herd with around 8 months of the year spent on agistment country spread around the Darling Downs and Eastern Maranoa areas. The remainder of the time is spent at Dalby Downs for calving and the AI process.

In the last twelve months we have made a concerted effort to enter Burenda bred or sired progeny into various carcass and show sale competitions with the aim to see how the progeny perform. A pen of Burenda sired Brangus heifers took out first place in the Pen of Trade Grain/Crop Assist Heifers at the Clermont Beef Expo late last year. A pen of Burenda Angus and Brangus sired steers came first in their class at the Biggenden Show Steer Sale earlier this year. Currently we have a pen of Angus cross steers entered into the RNA Paddock to Palate competition and for the first 50 days on feed we have managed a 2.73kg/day weight gain which is up with the best. Other achievements include Queensland Top 100 MSA Producer of the 2014-2015 year and Burenda sired Angus progeny win 1st Milk Tooth Heifer, 1st Milk Tooth Steer, 1st Pen of Three Milk Tooth Heifers and a 3rd in the Pen of Three Replacement Heifers at the Eidsvold Show in May.

We were privileged to have visits from the Chinese and Indonesian delegations during the year to view our operations and inspect the herd. Both parties were very complimentary on the day.

The beef industry is experiencing much improved prices of late but is still faced with numerous hurdles, the main one being the effects of drought, and as a Stud and commercial breeder we are fully aware of the problems experienced by our clients. As a consequence we are again offering some special conditions for this year's sale and these are detailed in the sale information pages in this catalogue. Briefly they offer extended terms for payment and volume buy discounts.

Manager Jonathan Schmidt has the bulls in great shape and they are doing well on the silage ration. There are photos of many of the bulls on our website. Please contact Jonathan on 07 4663 4002 or 0429 067 313 for any further details. Auctions Plus will be active again this year with Live Streaming attached for those unable to make the sale and who would like to see the bulls go through the ring. Our insistence on breeding for fertility, growth and carcass quality is paying dividends. We believe buyers will be impressed when they assess this year's draft. The 2 year old bulls will average over 750kg and have plenty of length, strength and fleshing ability. The catalogue includes plenty of sires suitable for use on heifers. Please view full details of each bull on our website www.burendaangus.com.au and remember - you are always welcome at Burenda to check out our herd and operation.

SPECIAL ALLOWANCES FOR 2016 SALE

Even with solid returns for beef cattle in the last few months, 2016 has still been a difficult year for beef producers in many parts of drought affected Queensland. Burenda recognises this and has decided to keep offering assistance to those producers who are considering purchasing bulls at our 2016 Roma Sale. After a reasonable start to the spring we have since had to experience possibly our driest late summer into autumn spell and our blessing has been the fortuitous conservation of silage and hay in late 2015. This has allowed us to continue normal operation of the Burenda Stud's as it would in a normal year. While we cannot influence weather conditions in other areas of Qld and Dalby Downs has not benefited from a better season we would still like to offer the below special allowances to purchasers. It is our sincere hope that all sections of the beef industry will benefit from improved conditions in the coming year.

EXTENDED PAYMENT AND TERMS UP TO 1 YEAR

Buyers of 2 or more bulls are offered extended terms as follows:

1. One half of the total purchase price plus full GST on sale day (or within 7 days through agents) and the balance payable on or before the 24th February 2017.
2. If the buyer is located in a drought declared area and the bulls are despatched to that location then one half of the total purchase price plus full GST is payable on sale day (or within 7 days through agents) and the balance payable on or before the 25th August 2017.

VOLUME DISCOUNTS

Buyers of 2 or more bulls purchased at this year's Roma Sale will qualify for discounts as follows:

For 2 bulls purchased receive a 2% discount on total purchase price
For 3 bulls purchased receive a 3% discount on total purchase price
For 4 bulls purchased receive a 4% discount on total purchase price
For 5 bulls purchased receive a 5% discount on total purchase price
For 6 bulls purchased receive a 6% discount on total purchase price
For 7 bulls purchased receive a 7% discount on total purchase price
For 8 bulls purchased receive a 8% discount on total purchase price
For 9 bulls purchased receive a 9% discount on total purchase price
For 10 or more bulls purchased receive a 10% discount on total purchase price

Upcoming Burenda Sales

Clermont Angus & Brangus Bull Sale 6th October 2016 at 10am
60 2 year olds comprising of 40 Angus bulls and 20 Brangus Bulls.

SALE INFORMATION

Sale location and inspection times

The Burenda Angus Bull Sale 2016 will be held at the Roma saleyards, Warrego Hwy Roma Qld 4455. Sale time is 11:00am and inspections can be made from 8am on sale day. We will also be at the yards the day before if you are in the area for early inspections

Identification

All bulls have NLIS tags, lot numbers and freeze brands.
The Burenda PIC number is QAWB0619
All bulls are registered with the Angus Society of Australia

Safety Rules & Recommendations

We are confident all our bulls offered for sale are quiet and of sound temperament and are used to being handled in yards. However sale day brings a differing set of conditions and the bulls are subjected to unusual levels of noise and pressure with many people invading their space. Even the quietest bull is still an unpredictable animal who can misbehave. Visitors entering pens do so at their own risk and are subject to conditions set out by the Roma Saleyards.

Buyer Registration

A buyer registration system will apply. Please register with the selling agent well before the auction commences. AuctionsPlus will be running in conjunction with this sale and registration must be completed within the conditions set out by AuctionsPlus. For these terms and conditions please visit www.auctionsplus.com.au

Sale Conditions

All lots will be sold subject to the usual conditions governing auction sales which will be displayed on the day and are detailed in the back of this catalogue. The auction price is **exclusive of GST**

Rebate

The vendor has agreed to allow 6% rebate to outside agents introducing the approved buyers no later than 24 hours prior to the sale, accompanying their buyer to the sale and settling on their behalf within 7 days of the sale. For outside agents introducing approved buyers within 24 hours prior to the sale **BUT NOT** attending the sale with their clients, a 3% rebate will be paid

TERMS

Any buyer purchasing 2 or more bulls may pay one half of the purchase price on sale day (or within 7 days through agents) and the other half on or before 24th February 2017.
Buyers need to accept these terms on sale day when settling their account

Delivery and Transport

Free transport and delivery to selected Major centres is available by negotiation with Burenda Manager Jonathan Schmidt after the sale has concluded.

Volume Discounts

For buyers who purchase 2 or more bulls a discount will be allowed as follows:

Buying 2 bulls = 2% discount on total purchase price
Buying 3 bulls = 3% discount on total purchase price
Buying 4 bulls = 4% discount on total purchase price
Buying 5 bulls = 5% discount on total purchase price
Buying 6 bulls = 6% discount on total purchase price
Buying 7 bulls = 7% discount on total purchase price
Buying 8 bulls = 8% discount on total purchase price
Buying 9 bulls = 9% discount on total purchase price
Buying 10 or more bulls = 10% discount on total purchase price

Health Treatments

All Burenda Angus Bulls presented at the sale have been treated for the following :
Pestiguard Vaccine, 7-in-1 Vaccine, Botulism Vaccine, 3 Day Sickness Vaccine, Vibrio Vaccine, Tickfever Blood, and pre treated for lice

INSURANCE

Ownership passes at the fall of the hammer. Insurance can be arranged on the day through GDL or your own agent

Breeding Soundness & Semen Test

All bulls have been semen & morphology tested and passed satisfactorily for soundness by John Chapman of South East Qld Genetics. Full details will be available on sale day

Raw Data

All bulls will be selling with full information on weights, scrotal measurements and ultrasound scanning details. Enquiries prior to the sale regarding raw data can be made by contacting Jonathan Schmidt on 0429 067 313 also raw data will be posted on our website prior to sale day at www.burendaangus.com.au

Semen Interest In Bulls

Burenda will retain a half interest in any semen sold from bulls in this sale. Because Burenda sells most of their top bulls it is possible they may wish to collect semen at some future date for their own use or for sale. This is a revenue sharing opportunity for buyers. We retain the right to access bulls at a negotiated time and place and at Burenda's cost. Owners have the right to use their half share in their own herds or revenue share with Burenda in semen sold to other users.

2 Year Guarantee

In addition to the standard warranties provided in stud stock auction terms, Burenda is proud to provide a 2 year guarantee for all bulls sold at this sale. We warrant that the bulls are fertile and capable of natural service at the time of the sale. Should a bull become infertile or break down within 2 years for reasons other than injury or misadventure from August 31st, 2016 Burenda will:
1. Provide you with a satisfactory replacement
OR
2. Provide you with a credit equal to the purchase price of the bull less salvage value and less seasonal value. This credit may be used at any future Burenda Bull Sale.
Burenda WILL require you to provide a veterinary report.

SALE CATALOGUE DISCLAIMER

All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor nor the selling agents make any other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information included in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

DNA PATERNITY VERIFICATION

It is a requirement of Angus Australia that all bulls used to sire calves for registration in the Angus Australia Herd Book Register, Red Angus Register or Angus Performance Register must have been DNA paternity verified if they are born in or after the 'Y' year (2003). Buyers intending to use bulls listed in this catalogue to produce calves to be registered in these registers should obtain DNA paternity verification on those bulls before they are used for breeding.

PRIVACY INFORMATION

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYER'S OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO THE ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its databases and disclosing that information to its members on its website.

I, the buyer of animals with the following registration numbers from member (name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the following animal(s) that I have purchased, maintaining its databases and disclosing that information to its members on its website.

Signature:

Date:

Please forward this completed consent form to Angus Australia, Glen Innes Road, Locked Bag 11, Armidale NSW 2350. If you have any queries, please telephone 02 6772 3011 or e-mail office@angusaustralia.com.au.

UNDERSTANDING ANGUS BREEDPLAN EBVs

What is Angus BREEDPLAN?

Angus BREEDPLAN is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. Angus BREEDPLAN uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

Angus BREEDPLAN includes pedigree, performance and genomic information from the Angus Australia and New Zealand Angus Association databases to evaluate the genetics of animals across Australia and New Zealand.

Angus BREEDPLAN analyses are conducted by the Agricultural Business Research Institute (ABRI), using software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England. Ongoing BREEDPLAN research and development is supported by Meat and Livestock Australia.

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

Using EBVs to Compare the Genetics of Two Animals

Angus BREEDPLAN EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia and New Zealand.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to:

- ◆ the breed average EBV
- ◆ the percentile table

The current breed average EBV and percentile table is provided in these explanatory notes.

Considering Accuracy

An accuracy value is published in association with each EBV, which is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50- 74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of Angus BREEDPLAN EBVs

EBVs are calculated for a range of traits within Angus BREEDPLAN, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this sale catalogue is provided on the following pages.

BIRTH			
Calving Ease Direct	(%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease Daughters	(%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Gestation Length	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Birth Weight	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
GROWTH			
200 Day Growth	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day Weight	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day Weight	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Mature Cow Weight	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY			
Days to Calving	kg	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Scrotal Size	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASE			
Carcase Weight	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
Eye Muscle Area	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
Rump Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
Retail Beef Yield	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
Intramuscular Fat	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.

FEED EFFICIENCY			
Net Feed Intake (Post Weaning)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a growing phase.	Lower EBVs indicate more feed efficiency.
Net Feed Intake (Feedlot)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
TEMPERAMENT			
Docility	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
STRUCTURE			
Front Feet Angle	%	Genetic differences between animals in desirable front feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Front Feet Claw Set	%	Genetic differences between animals in desirable front feet claw set structure (shape and evenness of claw).	Higher EBVs indicate more desirable structure.
Rear Feet Angle	%	Genetic differences between animals in desirable rear feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Rear Leg Hind View	%	Genetic differences between animals in desirable rear leg structure when viewed from behind.	Higher EBVs indicate more desirable structure.
Rear Leg Side View	%	Genetic differences between animals in desirable rear leg structure when viewed from the side.	Higher EBVs indicate more desirable structure.
SELECTION INDEXES			
Angus Breeding Index	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
Domestic Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indicate greater profitability.
Heavy Grain Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indicate greater profitability.
Heavy Grass Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indicate greater profitability.

Feeding for Lifetime Performance

Supporting the structural integrity of the young bull during development not only delivers immediate health benefits, but directs lifetime production. The ultimate aim of every good bull producer should be to support their young animals growing to genetic potential using a well-managed plane of nutrition rather than relying on a high impact, high starch diet in a race to the auction ring.

The problem in a nutshell for competitive breeders is that preparation for the bull sale period has long been seen as a bull fattening competition and observed with concern by potential buyers. However there is a good argument and solid science to support animal development for lifetime performance in this period of critical growth.

While mature bulls are remarkably resistant to nutritional stress, maintaining fertility, condition and vigour in very poor conditions. Young bulls can suffer 'whole of life' consequences if fed too much, too little or given feed of poor quality. Underfeeding can retard growth rates, delay puberty and affect fertility. Overfeeding can result in decreased testicular size, reducing sperm reserves and seminal quality. Both can affect eventual digestive tract integrity and capacity. Balanced minerals and vitamins are also crucial in this phase as are freedom from rancidity and mycotoxins in feeds.

When seasonal conditions are optimal, there is no constraint to development. However, an animal's potential is often not met because pasture quality, quantity and digestibility decline as seasons progress. Failure to grow close to potential during development can permanently retard many crucial performance factors including testicular function and digestive tract capacity.

Although we often measure performance over scales, it's what is happening inside the animal that is most important. You don't have to be on the end of an autopsy knife for very long to experience the impact a poorly developed liver will have on an otherwise healthy

animal. The heart, kidneys and lungs are also critical organs but no more important than the growth and development of four stomachs working in unison to break down the structural carbohydrate in grasses. It's also very important not to ignore the critical endocrine (hormone) cascades developing in a young animal that ensure they are able to properly govern things like blood sugar, inflammatory responses and sexual competence.

Exercise is also imperative both inside and out. Just as a growing animal cannot attain full structural tone without exercise, the digestive tract also requires a full rumen and adequate fibre base to fully develop for lifetime performance.

The point being, the genetic material your clients are purchasing requires a fully functioning beast to present to cows in the paddock.

The difficulty is to balance a rumen full of fibre with the demands of a fast-growing young animal. Although it is wise to talk with a nutritionist and your feed supplier, the goal can be lost if you ignore your own common sense. Fad diets exist in all species.

- The younger the bull is, the more protein he requires as protein is a higher proportion of the weight he is putting on right? Organ and tissue development.
- The longer you can use highly digestible pasture to grow these bulls the better, if not you must mimic as closely as possible the profile of an ideal pasture. Think about what that looks like in the rumen.

- Start offering small amounts of quality supplement from a young age. Your overall expense will be very similar

to a 3 month race to the finish on a high volume high cereal ration trying to make up growth lost in development post-weaning and the animal will be far more structurally sound.

Remember the same specifications can be met with a wide variety of ingredients. Use cottonseed meal and Urea as an example, they can both deliver Crude Protein into the diet, but could not be considered interchangeable. You must work closely with your feed supplier to guarantee that there are no major changes in grains or protein meals between loads.

Let's move away from the feeding competition, and develop bulls that will serve cattle for many years, doing nothing but good for your reputation, your breed and the industry.

Matthew Bekker MAgP PAS
Novus International
Regional Manager, Northern Australia

"...Failure to grow close to potential during development can permanently retard many crucial performance factors including testicular function and digestive tract capacity."

Traits Observed: BWT,200WT,400WT(x2),SS,FAT,EMA,IMF,Genomics

Possibly our most outstanding sire with 223 angus progeny on the ground. Excellent temperament, fertility, calving ease, and gestation length all coupled with growth, EMA, and IMF. A relentless worker who is easy to handle and easy doing. Fourteen progeny oozing in charm with length in the sale with last years twenty yearling sons averaging \$5237 and topping at \$8000.

14 Sons Lots 24,39,53,59,61,64,65,67,71,79,98,103,116 & 119.

Docklands has been used in the Burenda herd to improve calving ease, fertility, all growth traits and particularly our rib and rump fat levels. With the injection of these higher fats his progeny have excelled in their ability to do well under all environmental conditions. 18 sons averaged \$7444 with a top of \$10500 twice at the 2015 sale.

15 Sons Lots 6,16,17,23,29,32,35,37,70,74,76,81,92,105 & 106.

Emperor has over 4460 progeny and is the top selling son of Berkly for \$91000. His progeny stand out for muscle pattern and capacity, blending calving ease with high growth and carcass weight. The use of Emperor in the Burenda cow herd has produced thick meaty progeny with sire looks and exceptional doing ability. Nine sons averaged \$8555 with a top of \$13000. 10 Sons Lots 3,4,10,11,13,14,22,25,69 & 86.

BarTEL semen was introduced into the herd for his great calving ease, gestation length, birth weight, scrotal and days to calving figures whilst improving carcass weight, EMA and IMF. His progeny have been moderate in growth with fantastic doing ability on grass, grass and leucaena pastures or on crop. Ten sons averaged \$6950 with a top of \$11000 last sale. 5 Sons Lots 78,80,89,90 & 91.

A favourite of mine that is only base APR as he was born in a group of 140 angus heifers and we could never mother him up. He was a survivor and drank from all cows. He would be by AI at the time by a number of possible sires used over the H heifers that year. We will have DNA information and EBVs available on sale day. Possible sires include - Ayrvale Bartel E7, Carabar Docklands D62, SAV Mustang, SAV Thunderbird, Gobongo Bulletproof and Burenda Geiger Counter.

Notes:

Weighing Equipment

We stock a wide range of weighing equipment and are suppliers for Tru-Test and Ruddweigh.

With the Tru-Test XR5000, management decisions are made easy. Amongst many other features, it allows you to capture a wide range of animal information needed to help you make the right decisions. It can be used to quickly identify poor-performing animals, optimise your breeding programme and catch animal health issues early.

Fencing & Steel Supplies

Want the world's
most powerful
Energizer?
Problem solved.
M10,000i Fence Energizer

Made from low tensile wire in a continuous twist pattern, Iowa offers:

- A more effective option in fire prone areas compared to high tensile wire
- Continuous twist pattern locks the barbs in place to reduce any movement with stock pressure
- Easier to handle along the fence line than high tensile wire
- Consistent barb-spacing of 10cm

LONGLIFE BLUE IOWA BARBED WIRE
