# PERFORMANCE YOU CAN COUNT ON

## Dear Breeder,

Our 9th Walgett bull sale features sons of some of the most proven and high performance sires in Australia – bred with a focus on structure, fertility, calving ease, growth, carcase and temperament.

The average of the sale team is in the top 25% of the breed for gestation length, 200, 400 and 600 day growth, fertility, carcase weight, IMF% and all the \$Index values.

Since 2000, almost 45,000 individual scanning records for fat depth, IMF% and EMA have been collected by Te Mania Angus and Team Te Mania progeny test herds. We also have over 5,500 carcase records and this is increasing monthly as we continue to create ways of gathering the carcase feedback data. This information is commercially relevant data to connect the Te Mania Angus nucleus herd to profit drivers in commercial beef production.

Tuwharetoa Regent D145, is the most highly proven sire in Australia, as well as one of the highest marbling sires (+4.4%). Regent has 23 sons in this sale, and they stand out for growth, frame and carcase quality.

Te Mania Berkley B1 has a magnificent phenotype which is clearly shown in his progeny. One of the country's most popular sires, he combines high growth, calving ease and carcase weight and is the highest ranked sire for the Heavy Grain Index and the second highest for the Angus Breeding Index.

Other homebred Te Mania sires featured are the \$91,000 Te Mania Emperor E343, Te Mania Garth G67, Te Mania Gaskin G55, Te Mania Flame F565, Te Mania Fitzpatrick F528 and Te Mania Daquiri D19. They produce outstanding female lines and steers which excel – in the paddock, backgrounding, at the feedlots and on the plate.

Other sires include GAR Twinhearts. Our first offering of his sons in our March bull sale this year sold to \$21,000. Plus Docklands D62, Circle A Incentive and Werner Westward 357.

## Structure and Temperament

The best figures in the world don't add up unless conformation is king. This is why all Te Mania Angus cattle are independently assessed for structure by the most demanding benchmarks.

All bulls offered are out of an elite female herd that is formed by uncompromising standards. The 1,700 females are required to tick all boxes.

All females undergo the multitude of seedstock requirements and measurements (including structure and temperament assessments) in addition to passing commercial demands – calving at two-years-of age unassisted and rejoining annually whilst being managed under intensive commercial grazing conditions.

Progeny testing is also done under commercial conditions, through the 44 member herds of Team Te Mania, spread across SA, Victoria and NSW, providing enormous data from a range of climatic and geographic conditions.

Our aim is to provide and deliver the country's best genetics at commercially affordable prices, targeting:

- more calves on the ground
- that grow out faster
- comply at slaughter
- and produce productive female replacements

**You are invited to join the  
Gubbins and McFarlane families

# BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognized that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability.

Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

The current trend for improving consistency and quality of product has shifted producers' focus, towards selecting seedstock on carcass and growth genetic traits (EBV's). Whilst, this selection has been, and will continue to be pivotal in developing the Australian beef industry, we must not forget the fundamentals of livestock breeding.

The Beef Class Structural Assessment System was designed by the MLA, the BIA and several breed societies to address structural problems in the beef industry. Detailed analysis of three thousand animals in genetically linked herds indicated that structural characteristics such as leg and foot structure were moderately to highly heritable. BEEFXCEL now services many seedstock operations in their selection and grading of stock using the Beef Class Structural Assessment System.

Te Mania Angus is continually expanding their structural assessment program in order to optimise soundness and performance in their stock. The program involves an independent assessor from BEEFXCEL analysing the structural composition of the

herd on an individual basis. The program used at Te Mania comprises of:

- An annual assessment of all sale bulls;
- An annual assessment of all breeding females and donor cows
- All animals deemed inadequate are culled.

## An explanation of the Beef Class Structural Assessment System

The Beef Class Structural Assessment System uses a 1-9 scoring system for feet and leg structure;

- A score of 5 is ideal;
- A score of 4 or 6 shows slight variation from ideal, but this includes most sound animals. An animal scoring 4 or 6 would be acceptable in any breeding program;
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal;
- A score of 2 or 8 are low scoring animals and should be looked at cautiously and inspected very closely before purchasing;
- A score of 1 or 9 should not be catalogued and are considered immediate culls.

# SALE INFORMATION

# 111 BULLS

**NORTHERN SPRING BULL SALE  
TUESDAY 11 AUGUST 2015  
WALGETT SALEYARDS 11.30 AM**

## Our guarantee

Any Te Mania Angus bull that proves to be structurally unsound, infertile or incapable of service is guaranteed for up to three years from date of sale. Under these circumstances Te Mania Angus will:

- 1) Replace the bull with a satisfactory substitute if available, or
- 2) Issue a refund equal to the value remaining  
\*see below, less the salvage value.

*\*The guarantee covers the purchase value of the bull, without interest, cost and damages. The guarantee shall apply providing the bull's incapacity is not caused by injury or disease contracted since leaving Te Mania, the value remaining is calculated on the basis that the guarantee is reduced by one third of the purchase price for each year of service from the sale date. A veterinary certificate must be supplied by the purchaser on request.*

If any bull that is purchased does not possess a reasonable fertility, although not totally infertile, any dispute that may arise shall be settled by an arbitrator appointed by the auctioneers and must be lodged within 12 calendar months from date of sale.

We recommend that all purchasers discuss injury insurance of their bulls at the sale with their Agent. This guarantee is in addition to the normal terms and conditions governing auction sales.

## Health treatments

All the sale bulls are vaccinated for Vibriosis and Pestivirus (BVDV) prior to sale. We recommend that any bull that is purchased receives an annual booster for both these diseases.

All of our bulls receive 7 in 1 vaccinations at three-months of age, six weeks later and a booster as a yearling. They are drenched at weaning and periodically according to worm counts.

All Te Mania Angus bulls are examined by a veterinarian prior to sale day which includes palpation of the sexual anatomy and the circumference of the testicles. The jaw is checked for correct bite.

The Te Mania Angus herd is Monitored Negative Two (MN2) Status for Johnes Disease. Certificate Number is VC100, Te Mania Angus is Cattlecare accredited.

## Genetic disorders

ALL OUR SALE BULLS ARE TESTED FREE AND/OR PEDIGREE FREE OF:

Arthrogryposis Multiplex (AM),  
Neuropathic Hydrocephalus (NH) and  
Contractural Arachnodactyly (CA),  
formerly known as Fawn Calf Syndrome.

Some sale bulls carry the Developmental Duplications (DD) recessive gene, please refer to each lot for notification.

For more information on AM, NH, CA and DD visit our web site  
[www.temaniacom.au](http://www.temaniacom.au)

## Catering

Morning tea and lunch will be provided in support of Walgett Little Athletics

## Sale day phone numbers

Tom Gubbins	0429 952 197
Hamish McFarlane	0427 641606
James McCormack	0429 992 931
Chris Clemson	0428 287 222
Russell Hiscox	0428 281 248

## Pre – sale inspection

Bulls can be inspected at the Walgett Saleyards from Monday 10<sup>th</sup> August and from 7.30 am on the morning of the sale.

## Rebates

A rebate of 3% is allowed to all agents nominating and accompanying buyers to the sale and settling within 7 days of the invoice. All agents wishing to nominate buyers must do so in writing to the vendor by 5pm on Monday 10<sup>th</sup> August. Fax to Clemson Hiscox, Walgett 02 6828 3999.

## GST

Bulls will be sold GST exclusive ie. If the bull is knocked down for \$4,000, you will be charged \$4,400.

## Travel

All-weather airstrip at Walgett is available. Enquiries to Chris Clemson 0428 287 222.

## Walgett Accommodation

## Freight concession\*

Te Mania Angus will provide a free freight service to transport bulls between Roma, Queensland and Dubbo, NSW en route through Walgett. Onward freight arrangements from Dubbo or intermediate points will be the buyers' responsibility.\*

\* Conditions apply, see page 4 for more details

# FREE FREIGHT

Te Mania Angus will provide a free freight service to transport bulls between Roma, Queensland and Dubbo, NSW en route through Walgett.

Onward freight arrangements from Dubbo or intermediate points will be the buyers' responsibility.

To make use of this service, and to allow Te Mania Angus to organise it promptly and efficiently, it is essential buyers notify Te Mania Angus if they wish to use this service before making any other arrangements.

This service cannot be made available to buyers who have already contracted for freight before having made contact with Te Mania Angus.

All other destinations are arranged at low cost to the purchaser.

## Carriers

Dick Smith Transport of Dubbo have been invited to attend the sale to coordinate the delivery of stock. They can be contacted on 02 6882 2463 or 0428 636 236

# YOUR NEW BULL, HIS PAST AND FUTURE

The calves are weaned at four months of age. Early weaning was introduced a number of years ago to enhance rumen function and to allow the females a better run through the Autumn and winter.

At Te Mania Angus all calves are weighed and tagged with an NLIS tag and stud tag on the day they are born. They are weighed again at weaning and at 400 days, when they are ultrasound scanned for marbling, fat cover and eye muscle area. Testicle measurements are taken on the bull calves. Heifers are weighed again at 600 days and all this data is submitted to Breedplan.

Cows are weighed at weaning to contribute to the Mature Cow Weight EBV.

All the cowherd mating details are recorded with Group Breedplan, which calculates a gestation length EBV. Short gestation length is a crucial EBV to use along with Birth Weight when selecting young bulls to use over heifers.

All the bulls receive 7 in 1 vaccinations at three-months of age, six weeks later and a booster as a yearling. They are drenched at weaning and periodically according to worm counts. They will also receive a drench before leaving the property. All Te Mania Angus bulls are examined by a veterinarian immediately prior to sale day. This examination includes palpation of the sexual anatomy and measurements of the circumference of the testicles.

Pestivirus (also known as BVDV) is widespread in cattle herds worldwide. Te Mania Angus has taken three important steps to protect our clients:

- Cattle are all Ear notch tested before sale to make sure they are not PI
- A wide scale Ear notch testing/eradication program has been carried out – we believe Te Mania has no PI animals!
- Bulls are Vaccinated prior to sale so they are protected in the event they come in contact with the virus after leaving Te Mania.

**For information on BVDV go to [www.temaniacom.au](http://www.temaniacom.au)**

This is in line with world's best practice, and provides the highest level of protection possible against the terrible losses that Pestivirus can sometimes cause.

Structural assessments are carried out by Jim Green and are provided for each bull throughout the catalogue. This ensures that any bulls not meeting our uncompromising standards for structure are culled by an independent assessor.

## **Bull management**

When a bull leaves Te Mania Angus, he is leaving the security of a large mob and will arrive at unfamiliar territory at your property. If you can't put him into the bull mob straight away, unload him and make sure he has a steer or cow as a companion.

A young bull can move in with older bulls and settle in well, but remember, being the youngest he will get the last of the feed available because of the pecking order. The paddock needs to be reasonably large so he can keep away from the others and find adequate feed.

Young bulls are still growing fast and need enough feed to maintain their growth pattern and to be able to settle the cows quickly and efficiently.

Te Mania Angus bulls are accustomed to being handled by stockmen on motorbikes and with dogs. Most of the fences are electrified and the bulls treat them with respect. Always be considerate to your bull and handle him with respect and kindness. You will find you will receive these acts of respect back from him.

## **7 in 1 vaccination**

We recommend bulls be given a 7 in 1 vaccination annually, 2 to 4 weeks prior to joining.

## **Vibriosis vaccination**

Vibriosis is a common cause of infertility and is transmitted by bulls from one female to another. It is easily prevented by vaccination. Te Mania sale bulls have been given their primer and booster shots.

For future years we recommend your bull be given an annual booster 4 to 6 weeks prior to joining.

## **Bull:Cow ratio**

Under reasonable paddock conditions, a rising 2 year old bull should handle 40 empty cows on his own. An older bull can probably handle slightly more.

A synchronized AI program can decrease the number of bulls needed, because cows become pregnant to AI, but be aware that if the returns are returning over one week rather than three, then this will increase your bull requirement. Please contact Te Mania Angus for further clarification if required.

## **Before putting the bull out**

Before mating, cows should be seen cycling in groups with male calves also hanging around. The cows must be on a rising plane of nutrition, before you put the bull out, this ensures they have the optimum chance of cycling.

## **Observing the bull**

A bull is most likely to develop a condition or injury that causes infertility AFTER THE JOINING PERIOD HAS STARTED. It is vital that you monitor your bull at least twice weekly to ensure that he is able to mount cows and that he looks physically normal and is not lame.

Towards the end of the mating period, you should spend some time watching the cows to make sure that large numbers of cows are not cycling. Set aside half an hour one afternoon when the cows are at rest to make sure that most of the cycling activity has stopped, and give yourself some peace of mind! Writing down the cows number at service and observing them 21 days later is the most thorough infertility check.

## **After mating season**

When the season is finished, the bull should be drenched and put away on good feed. Adequate feed will help stop fighting and help the bulls settle into their groups.

## **Pestivirus (BVDV)**

The bulls were all given a vaccination prior to sale and we recommend annual boosters be given.

# WHAT ARE EBVS & HOW TO USE THEM?

Angus Group Breedplan is an advanced genetic evaluation system that provides a genetic description of Angus cattle for a large range of traits influencing fertility, growth and carcass performance. It provides predictions of the genetic merit of individual animals called Estimated Breeding Values (EBVs).

EBVs are based on all the available pedigree and performance records provided by breeders in Australia and New Zealand, along with available overseas genetic information.

EBVs are expressed in the units of measurement for each particular trait, and are shown as +ive or -ive values. The average EBV for different traits changes over time as the breed makes genetic progress. The averages for calves born in 2013 are shown at the bottom of each page. The averages are the easiest way to compare the merits of particular animals.

**ACCURACY (%)** Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal, its progeny and relatives, the accuracy of its EBVs for particular traits increases. The higher the accuracy, the less chance that the figure for each EBV will vary.

**CALVING EASE DIRECT (%)** CE (dir) tells us the amount of calving ease we can expect from a particular bull, relating directly to the females he is joined to. The calving ease figures will generally only appear on the chart of a sire, but can also appear on a younger bull's chart if there has been a lot of information gathered on his relatives. A positive value here is better.

**CALVING EASE DAUGHTERS (%)** CE (dtrs) tells us the amount of calving ease we can expect from a particular bull's daughters. A positive value here is better.

**GESTATION LENGTH (DAYS)** This figure gives us a value relating to the number of days from the date of conception to the calf birth date. A shorter gestation length is better as it gives more time for the cow to get back in calf and there is less chance of the calf getting too big in the uterus and increasing the chances of calving difficulties. A negative value here is better.

**BIRTH WT (KG)** Birth weight gives us an indication of how much the calves of a particular animal will weigh at birth. This figure should be monitored, but be careful not to go too low as this can cause problems with calf mortality and calving ease down the track. We must also remember that only a small percentage of calving ease is related to birth weight.

**200-DAY WT (KG), 400-DAY WT (KG) AND 600-DAY WT (KG)** Estimates the genetic differences between animals in liveweight at 200, 400 and 600 days of age. For example, if you have two bulls, one with a 600 day weight figure of +70 and the other with a figure of +80, you would expect the bull who is +80 to sire calves that would average 5kgs heavier at 600 days than the other (the sire provides 50% of the genes to the calf, 10kgs divided by 2). A positive value for these growth figures is better.

**MATURE COW WEIGHT (KG)** This figure provides an estimate of the genetic differences between animals in cow weight at 5 years of age. We try and keep this figure below the 600 Day Weight figure.

**MILK (KG)** The Milk figure provides an estimate of the genetic differences between animals in milk production, expressed as a variation in the 200-day weight of their daughter's calves. Angus cattle generally don't have a problem providing enough milk for their offspring, so we don't really need to worry too much about pushing this figure. Too much milk can lead to udder problems and difficulty in getting back in calf, so try to keep it positive, but remember the implications of too much milk.

**SCROTAL SIZE (CM)** This figure tells us about the scrotal circumference of an animal at 400 days of age. We measure scrotal size because there is a strong, positive correlation between scrotal size and fertility in the male and female offspring. The larger the testicles, the higher the likelihood of that bull siring more fertile daughters and getting more females in calf. A positive figure here is better.

**DAYS TO CALVING** DC tells us about female fertility, it is expressed as the number of days from the start of the joining period until subsequent calving. A more fertile cow, i.e. one that gets in calf earlier is obviously more beneficial in a breeding program. A negative value here is better.

**CARCASS WEIGHT (KG)** Carcass weight provides us with an estimate of the variation in carcass weight of a particular animal's progeny at slaughter (this figure is adjusted to 650 days of age), the higher the number the better.

**EYE MUSCLE AREA (CM<sup>2</sup>)** Results from ultrasound scanning of cattle at 15 – 18 months of age is used to calculate the expected genetic differences between animals in eye muscle area at the 12/13th rib site, in a 300kg carcass. This figure gives us a good idea of the muscling ability of the animal, the more muscling an animal possesses the better, so the higher the value here the better.

**RIB AND RUMP FAT (MM)** Ultrasound scanning is also used to calculate these figures which estimate the genetic differences between animals in fat depth at the 12/13th rib site (Rib Fat) and P8 rump site (Rump Fat), in a 300 kg carcass. Very fat cattle may produce less yield, however cattle that are too lean, may run into fertility problems, so these figures need to be monitored. The best way to monitor yield and fertility however, is by not necessarily concentrating on fat, but by keeping an eye on yield and fertility!

**RETAIL BEEF YIELD % (RBY%)** RBY% tells us the expected genetic differences between animals in percentage retail beef yield, in a 300kg carcass. A positive figure here is better.

**Intra-Muscular Fat % (Imf%)** ~ Marbling is very important for the premium markets. We can use ultrasound scanning (highly correlated to actual marbling score) to provide us with an EBV that estimates the genetic differences between animals in marbling at the 12/13th rib site, in a 300 kg carcass. A positive value here is better.

**NET FEED INTAKE (NFI)** Estimates of the genetic differences in the feed intake for animals adjusted to the same growth rate and weight base. Feed efficiency is one of the most economically important production traits. It particularly affects profitability of feedlots, but is also significant for grazing enterprises.

For three years now we have been taking blood samples of our herd for the purpose of testing Insulin-Like Growth Factor (IGF-1) which is moderately heritable (0.4) and correlated to NFI.

A negative value here is better.

## Understanding Selection Indexes

\$Index values were developed to make it easier to determine which animals are more suited to particular markets. Breedobject creates these indices, where it places relative emphasis on particular traits suited to each particular market. In this catalogue we have listed the new \$Index Values which replace the previous four \$Index Values. The new \$Indexes are:

**ANGUS BREEDING INDEX** This is a general purpose selection index that is suitable for use in the majority of commercial beef operations. It estimates the genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. It is particularly suited to producers who sell into a variety of different markets.

**DOMESTIC INDEX** Estimates the genetic differences between animals in net profitability per cow joined for a commercial self replacing Angus targeting the domestic supermarket trade. Steers are assumed to be finished using either grass, grass supplemented by grain or grain (eg 50 – 70 days) with steers slaughtered at 490 kg live weight (270 kgs carcass weight with 12 mm P8 fat depth) at 16 months of age. Daughters are retained for breeding and therefore maternal traits are of importance. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.

**HEAVY GRAIN INDEX:** Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 760 kg live weight (420 kg carcass weight with 30 mm P8 fat depth) at 24 months of age. Daughters are retained for breeding and therefore maternal traits are of importance. There is a significant premium for steers that exhibit superior marbling.

**HEAVY GRASS INDEX** Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 620 kg live weight (340 kg carcass weight with 12 mm P8 fat depth) at 22 months of age. Daughters are retained for breeding and therefore maternal traits are of importance. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.

## Red Colour Gene (RC)

The red colour gene is a simple recessive gene. Red Angus animals have two copies of the red gene (remember all genes come in pairs). Animals with only a single copy of the red colour gene will be black in colour, but can have red progeny if joined to other animals carrying the red colour gene.

If a Red Angus male and Red Angus female are mated, then 100% of the resultant progeny are expected to be red in colour. If a Black hidden red gene carrier is mated to a Red Angus, then 50% of the progeny are expected to be Red and the remaining 50% are expected to be Black animals carrying a single copy of the Red gene (i.e Red gene carrier animals). If two Red gene carriers are mated, 25% of the progeny are expected to be Red in colour, 25% will be Black non-red carriers and 50% will be Black carrier animals.

At Te Mania Angus we DNA test animals we know could carry the Red Gene. The DNA results are available upon request.

## Trial Structural Trait EBVs

the Beef Class Structural data was re-analysed following submission of further records scored by accredited assessors. At present, there are five traits analysed for over 9000 animals which were scored before they were 750 days of age. The number of traits analysed is likely to be expanded as further research is conducted on the structural scores available.

The five traits analysed (and the flags associated with the EBV) are:

**FA:** Front Feet Angle (ST indicates steep angle, SH indicates shallow angle)

**FC:** Front Feet Claw Set (OD indicates open divergent claws, SC indicates scissor claws)

**RA:** Rear Feet Angle (ST indicates steep angle, SH indicates shallow angle)

**RH:** Rear Leg Hind View (BL indicates bow legged, CH indicates cow hocked)

**RS:** Rear Leg Side View (SR indicates straight rear legs, SI indicates sickle hocked)

More positive EBVs indicate a higher genetic potential for the desirable form of the structural trait compared to the average for the analysis.

The EBV flags only appear against animals that have more extreme, negative breeding values. The flags indicate the type of undesirable structural variation the animal tends to have. For example, a bull with a flag of 'ST' next to its FA EBV may produce about 35% or more progeny with steep feet angle; while a bull with a flag of 'SH' may produce 35% or more progeny with shallow feet angle. Therefore, using EBVs and flags in combination will assist breeders in making the right decision to improve the structural soundness of their herd. Sires with at least 40% accuracy for a Structural EBV are reported.

Further information on Structural Scoring and the analysis of the structural traits can be obtained from the Angus Australia web site.

## Trial Docility Trait EBVs

Docility EBVs are expressed as differences in the percentage of progeny that will be scored with acceptable temperament (i.e. either "docile" or "restless").

Higher, more positive, Docility EBVs are more favourable. For example, a bull with an EBV of +20 would be expected to on average produce 15% more progeny with acceptable temperament than a bull with an EBV of -10.

# PERCENTILE BANDS FOR 2013 CALVES

Te Mania Berkley B1 has magnificent phenotype which breeds through into his progeny. He is very balanced with natural thickness and good length of body. He combines high growth and carcase weight with good calving ease.

Berkley is the highest ranking sire on Australian Breedplan for the Heavy Grain Index, and the 2nd highest for the Angus Breeding Index.

Te Mania Berkley has progeny throughout 140+ herds, and they stand out for muscle pattern and capacity, blending calving ease with high growth and carcase weight. He is the sire of Te Mania Emperor E343 who sold at auction in 2011 for \$91,000.

In November 2010, possession and 50% of semen marketing rights were purchased by Hazeldean Angus for \$65,000. Semen has been sold to Europe, the UK and Ireland and extending his global influence, he is now registered with the American Angus Association.

This true super sire is a large framed, athletic bull who provides a boost to growth and carcase quality, without sacrificing shape in his progeny. Ranked first in Australia for the most progeny performance recorded in the last two years, his balanced EBVs endorse his performance, as a trait leader for 400 and 600 day growth, plus carcase weight and IMF%. Regent was selected by Andrew Gubbins for his carcase quality, fertility and very sound structure. Purchased in partnership with Te Mania NZ and Dunoon Angus in 2010 for \$50,000. In 2013, he was sold to Peakes Angus with semen rights retained by the existing partnership. Regent is in increasing demand internationally, with semen exported to NZ, The USA and UK.

In our March 2015 bull sale, our first offering of GAR Twinhearts 8418 sons sold to \$21,000. This very exciting, handsome outcross sire was bred by Gardiners Angus Ranch, Kansas. He has \$Index values topping Australian Group Breedplan, with a good combination of calving ease, high growth, fertility and carcase qualities. We are one of the only herds in Australia where you can purchase one of his sons.

Angus Breed Trait Leader for 400 and 600 day weight, milk, scrotal size, days to calving, EMA and IMF%. Daiquiri D19 is moderately framed with plenty of shape, depth and stretch. His grand dam on the maternal side, X540 is a big framed cow with disposition and massive capacity. Everywhere you look in this pedigree there is a great female, with five guns of the Te Mania herd involved, R312, U275, Q42, Y32 and X540. Te Mania Daiquiri D19 comes with a home grown, highly proven pedigree going back for three generations. Possibly the best son of Te Mania Africa A217. Daiquiri has been heavily used in both the Te Mania Angus herd and throughout Team Te Mania where we have had 32 sons out working. Te Mania Angus have sold 61 sons of Te Mania Daiquiri in bull sales, for an average of \$6,985 and an equal sale high of \$25,000. Tested red gene carrier.

Te Mania Fitzpatrick F528 is ET conceived. He is a trait leader for seven traits, 200, 400, 600 day weight, milk, scrotal size, carcass weight and IMF%. His dam, Te Mania Mittagong B112 has been through our donor program in 2009 and 2012 and 2014. He has been heavily used both by AI and naturally within the Te Mania Angus and Team Te Mania herds and currently has in excess of 400 progeny recorded on Breedplan. His progeny are soundly structured, moderately framed and express good natural thickness. Sire pictured.

Te Mania Garth G67 is a versatile, multi-purpose sire with exceptional EBVs. He is a moderate to large framed son of Te Mania Africa, with the same outstanding temperament. He has good body length, is free moving with slick skin and fine hair, tight sheath and outstanding structure. Garth is ideal for heifer joinings with high accuracy, low birth weight and short gestation length EBVs. He has exceptional carcass qualities, with very high Index values, all in the top 5% of the breed. He bends the growth curve with moderate birth weight to high 600-day growth and has very good fertility. Te Mania Garth's maternal grand-sire is Te Mania Yorkshire VTMY437, sire of Te Mania Berkley VTMB1. His pedigree includes longevity and some of the great female lines of the Te Mania Angus herd, including Te Mania Beeac W112 and Te Mania Jedda Y32, who bred in the stud herd to 10 years of age.

Te Mania Gaskin G555, son of Tuwharetoa Regent D145, is a stylish and balanced bull who possesses good body length with heaps of natural thickness. Gaskin has fantastic phenotype and placid temperament. He has very good EBVs and sound structure. Te Mania Gaskin's pedigree is packed with performance and includes some of the great donor cows of the Te Mania herd - Te Mania Barunah R312, Te Mania Beeac R342 and Te Mania Beeac U343.

We have had good interest in this bull and we are excited about his progeny. We purchased an interest in his sire from New Zealand as an outcross option. Flame himself is a well framed bull with heaps of capacity, butt shape and body length together with a placid temperament. Many of these attributes he has passed onto his sons. Flame is a trait leader for gestation length, 400 day growth, scrotal size, carcass weight and IMF%. He has been heavily progeny tested through Te Mania Angus and Team Te Mania herds.

Te Mania Governor G576 is the first calf out of a two year old heifer. He possesses high calving ease together with good growth and a moderate mature cow weight EBV's. Governor has some of the great matrons of the Te Mania Angus herd in his pedigree, namely Te Mania Jemma W85 and his dam, Te Mania Dandloo E95. She is a larger frame cow with a feminine outlook, good body with plenty of length. Governor is well balanced and possesses good shape and body length and is well suited for use over heifers. He has high Index values and good carcass traits and has been used within the Te Mania Angus herd and progeny tested through Team Te Mania herds.

Te Mania Fenian F259 is a calving ease sire with outstanding fertility and carcase figures. Trait leader for calving ease (dir), calving ease (dir) and gestation length. A larger framed B1 son with lots of eye appeal. F259 exhibits plenty of muscle in a very free moving animal. He has combined the best attributes of an "easy on the eye" pedigree.

Te Mania Forgo F893 is an ET conceived son out of one of our top donor cows, Te Mania Dandloo C404. C404 has been through the donor mob in 2010, 2012 and 2014. This sire has been heavily used and progeny tested through Te Mania Angus and Team Te Mania herds. Forgo is a stylish, balanced sire who has good body length. His progeny are moderately framed with good natural thickness and easy doing ability and very soundly structured. Tested red gene carrier.

# HEALTHY HEIFERS. MATERIALISED INVESTMENT.

Heifers are the future of your herd. They hold the genetic potential of your operation. That's why it's important to protect them from Pestivirus. It's well known that Pestivirus can reduce your reproductive performance. Just a small drop in conception and calving rates can have a significant impact on your bottom line. That's why you should vaccinate all heifers with Pestigard. Vaccinate twice within 6 months, prior to joining, to get the best reproductive performance from your heifers.\*

**Protect your heifers potential. Vaccinate with Pestigard.**
