

McLachlan Group Bull Sale

Wednesday 19th August 2015 , 1pm

33 Angus Bulls * 16 Charolais Bulls

'North Logan', North Logan Rd, Cowra NSW

It is with pleasure to present this year's catalogue and a draft of outstanding Angus and Charolais bulls.

All bulls have been crop or grass reared with no grain or protein supplements. All bulls have been run in one management group after weaning, giving you the advantage to judge the bulls in a like for like situation.

Our conviction is to offer bulls that give you an advantage, grass reared only bulls are one advantage with longevity the key factor driving this philosophy. We want our bulls ready to work and presented in a manner that replicates how they will perform in your operation when you have them at home.

The turn around in cattle returns in the last couple of months is certainly encouraging with the long-term forecasts looking extremely good. The question will be whether the cattle numbers will be there to take advantage. Now is certainly the time to look more towards a breeding operation to take advantage of situation.

We take pleasure in presenting this draft of bulls that we consider a step above last year's draft. The bulls are a little meatier and carrying a little more carcass, which we consider the effect of the prominent A.I sires that we have used. The Charolais bulls sired by LT Ledger will be among the first of his progeny for sale in Australia.

This year's sale will also be run in conjunction with Auctions Plus, if you need assistance please feel free to contact us.

If you require any further assistance or pre sale inspection please feel free to contact us as we are only too happy to assist.

Looking forward to catching up with you on sale day.

McLachlan Group Bull Sale

Wednesday 19th August 2015

'North Logan', North Logan Rd Cowra NSW

33 Angus Bulls
16 Charolais Bulls

For more information contact:

Sam Hunter: 0429 020 141

www.mclachlan.com.au

Sale Information:

SALE LOCATION: 'North Logan', North Logan Rd, Cowra NSW

INSPECTIONS: All bulls will be penned at 'North Logan' by 9 am on sale day. Private inspections can be arranged prior to the sale. This can be done by contacting Warren Miller on 0423 396 014.

REFRESHMENTS: Canteen will be in operation

INSURANCE: Ownership passes at the fall of the hammer. An insurance representative will be in attendance on sale day.

BID CARD SYSTEM: The sale will be conducted under the bid card auction system with all standard terms and conditions of sale as stated by NSW Livestock Agents Association, and all potential buyers should discuss the terms and conditions of sale with the selling agents prior to purchase and a delivery and instruction sheet upon completion of the sale for all purchasers. No verbal delivery instructions can be accepted.

REBATE: 4% rebate will be allowed to outside agents introducing approved purchasers, agent to accompany buyer to sale. Introduction to be received in writing or fax 24hrs prior to sale. Settlement within 7 days.

DELIVERY: McLachlan group will deliver bulls free in our own truck to within 300 km of Cowra or to our property at Bendemeer. Semi access required. Contact Warren Miller for more information, Mob: 0423 396 014.

PHONE BIDDING: Most phones work on site. Any hassle an agent will be able to assist.

GUARANTEE: All bulls have been soundness evaluated. To the best of our knowledge bulls are in sound working order at time of sale. Any claim against the breeding ability or a structural breakdown of any animal must be made in writing and accompanied by a veterinary Certificate within 12 months of the sale date. Any animal failing to breed may be either replaced with an animal of similar value or a credit made available to the value of the purchase price, minus salvage value, for use at future McLachlan Group sales. The purchaser will be responsible for any costs incurred.

Disclaimer: Whilst all due care and attention has been paid to accuracy in the compilation of this catalogue, neither the vendors nor the selling agents or representatives thereof assume any responsibility whatsoever for the correctness, use or interpretation of the information on animals included in this sale catalogue.

	CED	CEDT	GL	BW	200	400	600	MCW	MK	SS	DC	CWT	EMA	RIB	RMP	RBY	IMF
EBV	-0.3	+0.0	-3.3	+4.4	+40	+74	+96	+86	+14	+1.6	-3.5	+54	+4.2	-0.1	-0.1	+0.3	+1.5

*It is important to note that EBV's for Charolais cannot be compared with EBV's for Angus

Brief Description of EBV's:

Estimated Breeding Values (EBVs) are predictions of an animal's genetic merit, based on available performance data on the individual and its relatives.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences from the breed base. As the breed base is set to a historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic change within the breed. The current breed averages are shown below. These averages provide a useful benchmark for comparing EBVs for animals.

CALVING EASE TRAITS

Calving Ease (DIR): estimate of genetic differences among animals in the ability of their calves from 2 year old heifers to be born unassisted. Higher, more +ive, Calving Ease (DIR) EBVs are more favourable.

Calving Ease (DTRS): estimates of genetic differences among animals in the ability of their 2 year old daughters to calve without assistance. Higher, more +ive, Calving Ease (DTRS) EBVs are more favourable.

Gestation Length: estimate of genetic differences among animals in the number of days from the date of conception until the calf birth date. Lower, or more -ive, Gestation Length EBVs are generally more favourable.

Birth Wt: estimate of genetic differences between animals in kg of calf birth weight. Calf birth weight is the biggest contributing factor causing calving difficulty in heifers. While low Birth Wt EBVs are favoured for calving ease they are also often associated with lower growth potential. Small, or moderate, Birth Wt EBVs are more favourable.

FERTILITY TRAITS

Days to Calving (DC): estimate of genetic differences among in female fertility, expressed as the number of days from the start of the joining period until subsequent calving. Females with shorter DC EBVs tend to commence cycling earlier after calving and conceive earlier in the joining period. They also tend to attain puberty at a younger age as heifers. Lower, or more -ive, Days to Calving EBVs are more favourable.

Scrotal Size: estimate of the genetic differences among animals in scrotal circumference at 400 days of age. Increased scrotal size is associated with increased semen production in bulls, and earlier age at puberty of bull and heifer progeny. Larger, or more +ive, Scrotal Size EBVs are more favourable.

GROWTH TRAITS

200-Day Wt: estimate of the genetic differences among animals in weight at 200 days of age. This is a measure of an animal's early growth to weaning. It is an important trait for breeders turning off animals as vealers or weaners.

400-Day Wt: estimate of the genetic differences among animals in weight at 400 days of age. This is an important trait for breeders turning off animals as yearlings.

600-Day Wt: estimate of the genetic differences among animals in live-weight at 600 days of age. This is an important trait for breeders targeting the production of animals suited for heavy weight grass finished or grain fed market

MATERNAL TRAITS

Milk: estimate of the genetic differences among animals in milk production potential, expressed through variation in calf growth performance. Larger, more +ive, or moderate, Milk EBVs can be more favourable, depending on the environment.

Mature Cow Wt: estimate of the genetic differences among animals in cow weight at 5 years of age.

CARCASE TRAITS

Carcase Wt: estimate of the genetic differences among animals in hot standard carcass weight at 750 days of age. Larger, more +ive, Carcass Weight EBVs are more favourable.

EMA: estimate of the genetic differences among animals in eye muscle area (cm²) at the 12/13th rib site on a 400kg carcass. Larger, more +ive, EMA EBVs are generally more favourable.

Rib Fat: estimate of the genetic differences among animals in fat depth (mm) at the 12/13th rib site, measures on a 400kg carcass. More positive (+ive), or more negative (-ive), Rib Fat EBVs may be more favourable, depending on your breeding goals.

Rump Fat: estimate of genetic differences among animals in fat depth at the P8 rump site on a standard 400kg carcass. More positive (+ive), or more negative (-ive), Rib Fat EBVs may be more favourable, depending on your breeding goals.

IMF%: estimate of genetic differences among animals in percentage intra-muscular fat (marbling) in a 400kg carcass.

INDEX VALUES

Angus Breeding: estimates the genetic differences between animals in net profitability per cow, joined in a typical commercial self-replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. The index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.

Domestic: estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting the domestic supermarket trade, with progeny finished using either grass, grass supplemented by grain or grain finishing systems.

Heavy Grain: estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.

Heavy Grass: estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting pasture finished heavy steers.

UNDERSTANDING ACCURACIES

The accuracy associated with an EBV gives an indication of its reliability, and the likely extent of its possible change as more information becomes available. As more data becomes available on animals (or its progeny, or relatives) then the accuracy of its EBVs for particular traits will increase.

Accuracies are influenced by the heritability of traits and the genetic associations existing between them. For lowly heritable traits, more information is required to achieve a similar accuracy to that of highly heritable traits.

Accuracies are expressed as percentages. The higher the percentage, the greater the chance that the EBV is a close estimate of the animal's true genetic merit, and the less likelihood that the EBV will change as more information becomes available.
