42nd Annual Sale

IRONBARK HEREFORDS 1933 to 2015 - 82 YEARS

The Ironbark Stud is in its 82nd year and this will be our 42nd Annual Bull Sale, a milestone in the beef cattle industry in Australia.

What a difference a year makes; the cattle market is at an all time high, the future looks bright for the beef industry and for agriculture in general. The season is in much better shape and continuing to improve so good times ahead. I attended Beef Week in Rockhampton in May; 85,000 beef enthusiasts from Australia and around the world attended the event over 6 days. It was certainly an uplifting experience. If the market and opportunities are half as good as what they say, it will be very good.

I brought back a high degree of confidence in the Ironbark program after meeting with feedlotter and processors throughout the week; they certainly like the consistency of the Ironbark blood cattle. They continually tell me "don't change what you're doing because consistent performance in the feedlot and processing sectors is where the profitability lies." Recently I went to the launch of JBS Great Southern grass fed brand at their newly acquired Scone facility. It's a brand that will suit Hereford cattle. They source 3000 cattle a week and kill at their Brooklyn facility in Melbourne VIC and their Scone facility in NSW, for this particular grass fed brand which is exported into the US. They have a sensible animal welfare farm accreditation where calves are to be dehorned under 5 months of age. (See JBS Great Southern ad in this catalogue)

Significant numbers of Ironbark bred feeder steers end up at the Whyalla feedlot at Texas in QLD. Ironbark has a very good relationship with this particular feedlot. I strongly encourage producers, if they're not already EU accredited, to look into it as the premiums are mostly 20c above the normal feeder rate (see Whyalla ad in this catalogue).

This year I would encourage you to trade your old bulls in, they are worth between \$2000 and \$3000 in the fat market, and invest in a younger bull with fresh genetics.

30 sires are represented in the catalogue so a very large gene pool of genetics is on offer. Be very careful not to outcross for the sake of outcross; that is the quickest way you can lose uniformity and consistency in your program. Look at the consistency Holden and Cooper have bred into their world renowned herds by continually stacking the pedigrees with genetics that they are familiar with.

New sires: HH Advance 0002X, HH Advance 1098Y and HH Advance 0132X have some outstanding bulls in the sale. They're uniform and consistent and backed up by one of the top Hereford cow herds in the world. They are real world cattle with great EBVs and Phenotype. 0002X sons sold up to \$80,000 at Holden's record breaking 2014 sale. They deliver calving ease, growth, carcass and eye appeal. HH Advance 9169W and HH Advance 7101T are having a major impact on our female herd. You'll see a number of outstanding bulls in the sale out of cows by these bulls.

New Australian sires this year are Mawarra Yesteryear, purchased at Hereford National for \$30,000 and Wallan Creek Victory Blend who was purchased for \$11,000. Both bulls have done an outstanding job.

Ironbark uses the bloodlines of Montana-based studs Cooper and Holden, both worldwide industry leaders. Being older programs, they've got a lot of depth to their breeding. Both the Holden and Cooper programs have tremendous uniformity – their cattle all breed the same. Both studs concentrated on birth weight and maternal traits. They've been measuring birth weight for every animal on each side of the pedigree for 40 years. If you buy out of a uniform program with a very strong cow base you'll win and improve your cattle. If it's a shallow cow base, that's how a bull is going to produce, even if he looks unreal. You've got to have the cow in mind as much as the progeny. If you get your females right, the rest will follow.

We feed a significant number of our own steers and Ironbark-blood steers for the domestic and export trade and we have a lot of information on carcass assessment of these bloodlines. The results are outstanding, giving us full confidence to push ahead with the program.

Consistency is key to our breeding decisions. Throughout the draft there are many quality low birth weight heifer bulls. We urge producers to use good bulls on their heifers as they represent the best genetics. It will enable far greater selection for genetic strength when yearly selecting your heifer replacements.

The Sale bulls are a tremendous draft of high quality genetics, the best we have presented. They have been running on oats since the middle of April. They are well grown and in ideal working condition. The bulls are semen tested and ready for the cows. I believe we have as much depth in the 2015 offering as any that I have been involved with.

Come along and have a look – They are a magnificent line of bulls.

Adrian Spencer

Performance Uniformity Consistency
IRONBARK BLOOD IS WHAT THE INDUSTRY WANTS.

Landmark, your stud stock specialists.

At Landmark, the people you deal with have the combined years of experience buying and selling livestock to add real value to your business. With access to the best livestock network across the country, we can help you drive your stud stock business and provide more marketing opportunities. That's why more Australian farmers look to us.

MOBILE PHONES ARE NOW USABLE AT THE SALE BARN

2% Rebate to outside agents introducing buyers in writing 24 hours prior to the sale. Fax details to Elders Tamworth - 02 6765 5690.
 FERTILITY: Bulls have been semen tested.

All bulls offered for sale were tested for Pestivirus (BVDV) antigen using DNA hair testing to detect presence of the virus in the animals. All bulls were test negative for pestivirus and therefore we declare that none of the bulls is a Persistently Infected (PI) Pestivirus (BVDV) carrier. At the request of some clients, all lots will be vaccinated with 7 in 1. Ironbark has never had any infection from these diseases. Bovine Johne's Disease: There is no restriction on the movement of cattle from the LLS - North West and they require no testing to go anywhere within Australia with the exception of Western Australia where appropriate paperwork is still required.

Lot 2 - INB J024 is sired by HH Advance 0002X who was brought to Australia by Vern Younger. The following is what Jack Holden has to say about this outstanding sire "0002X topped our 2011 sale at \$55,000 for 1/2 interest to Le Force Herefords. He has truly exceeded all of our expectations in his great combination of calving ease, growth, maternal and carcass strength. He is a proven heifer bull whose progeny also have power, rib, eye appeal and extra length. He is a trait leader for Calving Ease, BW, Milk, M&G and Scrotal EPDs along with \$CEZ, \$BMI and \$BII He has average progeny ratios of BWR 95.3; NR 100.3; YR 100.4. He has been used AI on many Angus heifers with great success. We have sold 13 sons for an average of \$28,000 and his first daughters are now in production and they are awesome. Look for lots more from this great young sire that combines what we all need in the beef industry." INB J024 is in the top 3% of the breed for 200, 400 day weight and EMA. He is also in the top 1% of the breed for 600 day weight and milk. His Dam is a Rambo bred cow with a milk figure of +22 an outstanding Hereford cow. INB J024 is a top ranked Hereford bull with a breed leading pedigree, performance figures, breed character, and softness. One of the better Hereford bulls bred at Ironbark.

NH Foods
Whyalla Beef

Whyalla Beef is looking to build relationships with producers supplying Hereford and Hereford X feeder cattle for the EU and non EU markets into both Whyalla Feedlot and Bective Feedlot

\$2,245

"We have purchased 70 x Rapid Plas Combination Tank & Troughs. These have allowed my stock to get a far better supply of water – my stock can get a quick drink and the water is actually cooler. I have noticed that my cattle actually look better than they did before, which is important for my stud operation. We needed the Rapid Plas system because it holds a lot more water than traditional troughs and allowed us to overcome pump and pipe-work limitations throughout our property. As well as for cattle, we use them for sheep and goats." A.M "Dalkeith" Poll Hereford Stud (70 x Combination Tank & Troughs 5000L)

Lot 7 - INB J268 is sired by Wallan Creek Victory Blend F099 who was purchased for \$11,000, a big powerful outcross sire who is having a major impact in the Ironbark program. There is a group of powerful sons on offer and the bull goes along with our strategy of selecting out of programs with a strong cow base that has stood the test of time over many years. If this strategy is followed uniformity is achieved. INB J268 is in the top 6% of the breed for 200, 400 and 600 day weight. His Dam is sired by CC 56M Sullivan 42R a Canadian bull that has left us with a highly productive line of females. Look at the performance of this cow, she has a milk figure of +18 and Homebuilder 603 appears in the pedigree and that is the way to breed uniformity into cattle; stacking the pedigrees with sires that have runs on the board.

Lot 10 - INB J259 is sired by HH Advance 1098Y and the following is what Jack Holden has to say "1098Y topped our 2012 sale at \$102,000 to Harrison Cattle Co. and Flying S Herefords. He is a heavily pigmented, powerhouse performance bull out of one of our very best cows. He is a trait leader for Calving Ease, Milk, M&G, and REA EPDs. His progeny are very well marked, long bodied, thick and stylish. He is backed by one of our very best cow families and his maternal granddam produced over \$250,000 in progeny sales. He is a great prospect to help carry on the tradition of the 8050U line of cattle in our herd." 1098Y is certainly performing in the Ironbark program on the above description. I am a great believer in these genetics; they are time measured cattle with worldwide acceptance. Uniformity is a trademark of these cattle. INB J259 is in the top 3% of the breed for milk, 200 and 400 day weight and in the top 1% of the breed for 600 day weight. EMA is in the top 7% of the breed. His Dam is a high performance cow sired by Kaludah Top Knotch. Breed leading genetics on offer here.

Lot 12 - INB J027 is sired by HH Advance 0002X who was brought to Australia by Vern Younger. The following is what Jack Holden has to say about this outstanding sire "0002X topped our 2011 sale at \$55,000 for 1/2 interest to Le Force Herefords. He has truly exceeded all of our expectations in his great combination of calving ease, growth, maternal and carcass strength. He is a proven heifer bull whose progeny also have power, rib, eye appeal and extra length. He is a trait leader for Calving Ease, BW, Milk, M&G and Scrotal EPDs along with \$CEZ, \$BMI and \$BII He has average progeny ratios of BWR 95.3; NR 100.3; YR 100.4. He has been used AI on many Angus heifers with great success. We have sold 13 sons for an average of \$28,000 and his first daughters are now in production and they are awesome. Look for lots more from this great young sire that combines what we all need in the beef industry." INB J027 is in the top 16% of the breed for birth weight and the top 10% of the breed for milk. A low birth weight sire on offer here ideal for heifers.

Lot 14 - INB J334 is sired by HH Advance 9169W and the following is what Jack Holden has to say "9169W was our selection to retain from our 2009 calf crop. He is a heavily pigmented, long bodied bull with extra eye appeal. He is backed by one of our very best cow families and his first daughters are outstanding. He combines strong growth EPD's with Milk, M&G, and REA EPD's that rank in the top 6% of the breed. His dam was a top donor that sold in our 2008 Female sale for \$22,000 and his maternal granddam is the great 1028L cow that has produced over \$200,000 in progeny sales." Uniformity, birth weight and female production are to be gained out of these Holden genetics. INB J334 is in the top 2% of the breed for milk. His Dam is a Homebuilder bred cow with a +15 for milk.

INB D024 is sired by Kaludah Top Knotch, a bull purchased at the Wodonga Hereford National Sale for \$32,000 by Ironbark and Reedy Creek. INB D024's dam is a high performing cow sired by INB Star General T577 who sold to Keith and Bob Miles, Bingberry Hereford Stud, Aberdeen NSW for \$18,000. INB D024 is proving to be an outstanding producer. INB D024 is a sire who weighs 1370kg running on grass, a truly outstanding Hereford bull. INB J073 is in the top 15% of the breed for 200 day weight and the top 10% of the breed for 400 and 600 day weight. His dam is a Neon/Homebuilder cross.

Ironbark's pedigree for prestige

RUTH CASKEY

A STRONG focus on the commercial producer has been the backbone of the Ironbark Herefords program at "Mulwaree", Barraba, for the past 80 years.

The stud was started by Edward Ted Spencer in 1933 as a bull breeding unit for the operation's commercial herd and continued by his son David Spencer.

Ironbark Herefords is now owned and managed by Ted's grandson, third-generation beef producer Adrian, along with his wife Wendy, children Isabella, Hugh and Ben, and his mother Margaret Spencer.

"It's obviously become much bigger since it began and we've been through some changes but we're still producing a superior product for the commercial breeding industry of Australia," Mr Spencer said. "The world's seedstock industry is much closer these days.

"We have access to the best genetics in the world, so we're constantly improving our line."

Ironbark uses the bloodlines of Montana-based studs Cooper and Holden, both worldwide industry leaders. "Being older programs, they've got a lot of depth to their breeding," Mr Spencer said.

"Both the Holden and Cooper programs have tremendous uniformity – their cattle all breed the same.

"A uniform line of steers in the feedlot will all perform well and hang up the same way."

Both studs concentrated on birthweight and maternal traits, Mr Spencer said.

"The major drawback in a lot of the whiteface programs in Australia is it's hard to find other programs concentrating on birthweight, milk, and udder quality in the females," he said.

"The North American studs are a lot more focused on the commercial attributes of the beef game than a lot of Australian stud producers.

"They've been measuring birthweight for every animal on each side of the pedigree for 40 years."

Mr Spencer got to know the overseas program while he was working in the US.

"They've got a lot more early growth in their cattle, better shape and more of what the industry needs in this country," he said.

"By using their genetics, we've got a faster growing beast with a better body shape and udder."

Between 60 per cent and 70pc of the stud's 1100 females are artificially inseminated each year.

"Al lets us use some of the best bulls on the planet as far as the Hereford breed is concerned," he said.

"There are of course labour costs in getting them all cycling and the associated costs, but we can use semen from a \$100,000 bull without having to spend that on him.

"We don't chase one-off bulls.

We're looking for a sire line that's consistent with a depth of breeding behind it. "Therefore we can really trial a sire line because we've got the numbers to work out which sires are performing."

The Cooper and Holden bloodlines have given Ironbark's cow herd a boost, constantly improving maternal traits.

"If you buy out of a uniform program with a very strong cow base you'll win and improve your cattle," Mr Spencer "If it's a shallow cow base, that's how a bull is going to produce, even if he looks unreal.

"You've got to have the cow in mind as much as the progeny. If you get your females right, the rest will follow."

The commercial performance focus is one

Listening key to constant improvement

RECEIVING feedback from feedlots and processors has helped the development of Ironbark Herefords.

While Breedplan's estimated breeding values (EBVs) can give a good estimate of performance, nothing beats the real results, according to stud principal Adrian Spencer.

"If you haven't got a lot of feedback about how the cattle are performing, you're flying blind," said Mr Spencer (pictured).

"You've got to get the real feedback to work out what areas are doing well and where you need to improve." Mr Spencer said running a commercial herd of 300

breeders allowed him to see how Ironbark cattle performed.

"We do some backgrounding for a feedlot using cattle with our own bloodline," he said.

"We use the commercial herd as a trial, buying some of our clients steers back and putting them through the system.

"The feedback is fantastic, particularly with weight gain and uniformity.

"Our cattle seem to kill in a very uniform fashion and they're able to meet MSA grading."

MSA grading and eating quality has always been a priority.

"MSA grading is a wonderful product for the Australian beef industry," Mr Spencer said.

"To consistently meet the grade you've got to have at least 50 per cent British breed and the modern Hereford is consistently meeting the targets.

"We're producing an all-round product where the female can go on and produce good calves and the steer is what the industry wants in terms of carcass and meat quality.

"We want cattle that can live in the environment and perform to industry specifications, and they're doing that."

reason Mr Spencer has stayed away from the show ring.

"We go to national events and everyone flocks to the heaviest bull with the largest eye muscle area.

"He's probably been on feed for the longest but I'd rather buy out of a program that has the commercial traits right.

"We're not after the show ribbon.

We're producing lines of bulls that will reproduce themselves and are commercially right for the environment and the

industry."

Being able to survive and thrive in all environments has led to Ironbark bulls being sold to NSW, Queensland, Victorian and Tasmanian producers.

"They're bulls that are able to handle different climates and adjust to environmental conditions," Mr Spencer said. "It's very important to us that our bulls can handle the conditions wherever they go.

"The worst thing that could ever happen as a stud operator is if someone from the western country rings

up and says the bull can't handle the climate and can't get the cows in calf."

The stud has also successfully sold to export markets, including Russia and Kazakhstan, for eight years.

"We're selling registered export stud heifers, as well as some bulls," Mr Spencer said.

"With those countries pedigree is very important. "They want the best quality they can get."

Lot 19 - INB J099 is sired by INB 603 Home Builder A481 who was sold in the 2007 sale for \$11,000. We have since purchased this outstanding sire and he stands at Ironbark today. A481 is a half brother to INB B220 who sold in the 2008 sale for \$30,000 to Noel & Liz Cook, Kindon Station, Goondiwindi, Qld. In the 2011 sale INB Rambo E009 sold for \$16,000 to Hylands Hereford Stud, Cootamundra NSW. In 2012 Sale INB F509 sold to Noel and Liz Cook for \$12,000. In the 2013 sale INB G692 sold for \$14,000 to Mike and Belinda Norton, Glen Innes NSW. In the 2014 sale INB H301 sold to Michael Hickey at Guyra, NSW for \$10,000. The dam of these bulls, INB W521 is without a doubt the leading producer in the Ironbark program. There are a run of great cows back through her pedigree. INB J099 is in the top 1% of the breed for 200 day weight and the top 7% of the breed for 400 and 600 day weight. INB J099's dam is a high performing Hot Shot bred cow.

Lot 20 - INB J126 is sired by INB Neon D439 a son of GH Neon 17N a sire line that has been a major success on the Hereford stage worldwide. Many of the high performing Hereford cattle in Australia trace back to this bloodline. At Ironbark the Neon bloodline has been extremely popular and highly sought after with sons topping at \$30,000. INB J126 is in the top 1% of the breed for EMA and the top 10% of the breed for milk, 200, 400 and 600 day weight. INB J126's dam is sired by HH Advance 7101T and has a milk figure of +18. This is where you will really see the Holden cattle shine from the female side. They will take breeding programs to another level.

Lot 21 - INB J306 is sired by Mawarra Yesteryear, purchased at the Hereford National for \$30,000 and is sired by Cootharaba Magnum, a breed leading Australian bred sire. Yesteryear has an outstanding line of high performance sons on offer and is bred out of a strong cow base which is our strategy on sire selection. Yesteryear stamps his progeny, they are all one type. INB J306 is in the top 3% for 200, 400 and 600 day weight. His dam is sired by Kaludah Jerry with a milk figure of +23. A top line bull with pedigree and performance.

Lot 23 - INB J085 is sired by HH Advance 1098Y and the following is what Jack Holden has to say "1098Y topped our 2012 sale at \$102,000 to Harrison Cattle Co. and Flying S Herefords. He is a heavily pigmented, powerhouse performance bull out of one of our very best cows. He is a trait leader for Calving Ease, Milk, M&G, and REA EPDs. His progeny are very well marked, long bodied, thick and stylish. He is backed by one of our very best cow families and his maternal granddam produced over \$250,000 in progeny sales. He is a great prospect to help carry on the tradition of the 805OU line of cattle in our herd." 1098Y is certainly performing in the Ironbark program on the above description. I am a great believer in these genetics; they are time measured cattle with worldwide acceptance. Uniformity is a trademark of these cattle. INB J085 is in the top 15% of the breed for milk and the top 12% of the breed for 600 day weight. His dam is sired by the \$20,000 bull Top Knotch D024.

Lot 24 - INB J587 is sired by the bull that needs no introduction; HH Home Builder 603. The Home Builder bloodline has had an enormous influence on the Ironbark program and his genetics are clearly evident on quite a number of commercial herds around the country. Home Builders have the ability to lift a herd in just one joining. INB J587 is in the top 6% of the breed for 200, 400, and 600 day weight and in the top 4% of the breed for EMA. INB J587's dam is a Rambo bred cow with a milk figure of +16.

Lot 30 - INB J109 is sired by INB 603 Home Builder A481 who was sold in the 2007 sale for \$11,000. We have since purchased this outstanding sire and he stands at Ironbark today. A481 is a half brother to INB B220 who sold in the 2008 sale for \$30,000 to Noel & Liz Cook, Kindon Station, Goondiwindi, Qld. In the 2011 sale INB Rambo E009 sold for \$16,000 to Hylands Hereford Stud, Cootamundra NSW. In 2012 Sale INB F509 sold to Noel and Liz Cook for \$12,000. In the 2013 sale INB G692 sold for \$14,000 to Mike and Belinda Norton, Glen Innes NSW. In the 2014 sale INB H301 sold to Michael Hickey at Guyra, NSW for \$10,000. The dam of these bulls, INB W521 is without a doubt the leading producer in the Ironbark program. There are a run of great cows back through her pedigree. Softness, quality and performance on offer here.

Lot 33 - INB J071 is sired by HH Advance 0002X who was brought to Australia by Vern Younger. The following is what Jack Holden has to say about this outstanding sire "0002X topped our 2011 sale at \$55,000 for ½ interest to Le Force Herefords. He has truly exceeded all of our expectations in his great combination of calving ease, growth, maternal and carcass strength. He is a proven heifer bull whose progeny also have power, rib, eye appeal and extra length. He is a trait leader for Calving Ease, BW, Milk, M&G and Scrotal EPDs along with \$CEZ, \$BMI and \$BII He has average progeny ratios of BWR 95.3; NR 100.3; YR 100.4. He has been used AI on many Angus heifers with great success. We have sold 13 sons for an average of \$28,000 and his first daughters are now in production and they are awesome. Look for lots more from this great young sire that combines what we all need in the beef industry." INB J071 is a low birth weight bull, in the top 2% of the breed for milk and in the top 25% of the breed for 600 day weight. INB J071's dam is a Hot Shot bred cow with a milk figure of +15.

Lot 35 - INB J072 is sired by INB 603 Home Builder A481 who was sold in the 2007 sale for \$11,000. We have since purchased this outstanding sire and he stands at Ironbark today. A481 is a half brother to INB B220 who sold in the 2008 sale for \$30,000 to Noel & Liz Cook, Kindon Station, Goondiwindi, Qld. In the 2011 sale INB Rambo E009 sold for \$16,000 to Hylands Hereford Stud, Cootamundra NSW. In 2012 Sale INB F509 sold to Noel and Liz Cook for \$12,000. In the 2013 sale INB G692 sold for \$14,000 to Mike and Belinda Norton, Glen Innes NSW. In the 2014 sale INB H301 sold to Michael Hickey at Guyra, NSW for \$10,000. The dam of these bulls, INB W521 is without a doubt the leading producer in the Ironbark program. There are a run of great cows back through her pedigree. INB J072 is in the top 5% of the breed for milk and 200 day weight and the top 7% of the breed for 400 and 600 day weight. INB J072's dam is a high performing Sharka bred cow with a milk figure of +21.

Lot 36 - INB J263 is sired by Mawarra Yesteryear, purchased at the Hereford National for \$30,000 and is sired by Cootharaba Magnum, a breed leading Australian bred sire. Yesteryear has an outstanding line of high performance sons on offer and is bred out of a strong cow base which is our strategy on sire selection. Yesteryear stamps his progeny, they are all one type. INB J263's dam is an Approval bred cow that was bred out of the same herd as Home Builder 603.

Lot 37 - INB J035 is sired by HH Advance 9169W and the following is what Jack Holden has to say "9169W was our selection to retain from our 2009 calf crop. He is a heavily pigmented, long bodied bull with extra eye appeal. He is backed by one of our very best cow families and his first daughters are outstanding. He combines strong growth EPD's with Milk, M&G, and REA EPD's that rank in the top 6% of the breed. His dam was a top donor that sold in our 2008 Female sale for \$22,000 and his maternal granddam is the great 1028L cow that has produced over \$200,000 in progeny sales." Uniformity, birth weight and female production are to be gained out of these Holden genetics. INB J035 is in the top 2% of the breed for milk, top 10% of the breed for 200 day weight, top 9% of the breed for EMA and top 21% of the breed for 600 day weight. INB J035's dam is a Hot Shot/Home Builder bred cow with a milk figure of +14.

Lot 38 - INB J066 is sired by HH Advance 1098Y and the following is what Jack Holden has to say "1098Y topped our 2012 sale at \$102,000 to Harrison Cattle Co. and Flying S Herefords. He is a heavily pigmented, powerhouse performance bull out of one of our very best cows. He is a trait leader for Calving Ease, Milk, M&G, and REA EPDs. His progeny are very well marked, long bodied, thick and stylish. He is backed by one of our very best cow families and his maternal granddam produced over \$250,000 in progeny sales. He is a great prospect to help carry on the tradition of the 8050U line of cattle in our herd." 1098Y is certainly performing in the Ironbark program on the above description. I am a great believer in these genetics; they are time measured cattle with worldwide acceptance. Uniformity is a trademark of these cattle. INB J066 is in the top 8% of the breed for 200 and 400 day weights and in the top 4% of the breed for 600 day weight and milk. INB J066's dam is a Hot Shot/Home Builder bred cow with a +14 for milk.

Lot 39 - INB J021 is sired by HH Advance 0132X and Jack Holden had the following to say "0132X has proven to be a great all around breeding bull that sires tremendous depth of side, shape, pigment and eye appeal. He is a calving ease, high maternal and carcass bull out of a great cow. He is a trait leader for Claving Ease, Scrotal, Milk, M&G and MARB EPDs along with \$CEZ, \$BMI and \$BII. His first daughters are calving now and are great brood type females with tremendous quality. His dam is one of our top donor females and sold for \$60,000 in our 2013 Female Sale She has produced 7 sons that have sold for an average of almost \$30,000. We are also sing a maternal brother to 0132X that sold to Jamison Herefords in 2013. 0132X has a top sire group of bulls in the sale that are soft made, easy on the eye and real industry type bulls. 0132X is currently in the Genex lineup of sires and his progeny are being well received around the country and the world." An 0132X son topped the 2014 Ironbark sale at \$32,000 to Noel and Liz Cook, Kindon Station, Goondiwindi, QLD and another son sold for \$14,000 to the Boland family from Bernie in Tasmania. Both organisations long standing Ironbark clients. INB J021's dam is a Kaludah Jerry cow and they have performed well in the Ironbark program.

Lot 45 - INB J049 is sired by INB Neon D439 a son of GH Neon 17N a sire line that has been a major success on the Hereford stage worldwide. Many of the high performing Hereford cattle in Australia trace back to this bloodline. At Ironbark the Neon bloodline has been extremely popular and highly sought after with sons topping at \$30,000. INB J126 is in the top 1% of the breed for EMA and the top 10% of the breed for milk, 200, 400 and 600 day weight. INB J126's dam is sired by HH Advance 7101T and has a milk figure of +18. This is where you will really see the Holden cattle shine from the female side. They will take breeding programs to another level. INB J049 is in the top 1% of the breed for 200 day weight, top 3% of the breed for 400 and 600 day weight and top 10% of the breed for EMA. INB J049's dam is a high performance Nashdale bred cow with a milk figure of +19.

Lot 47 - INB J366 is sired by HH Advance 9169W and the following is what Jack Holden has to say "9169W was our selection to retain from our 2009 calf crop. He is a heavily pigmented, long bodied bull with extra eye appeal. He is backed by one of our very best cow families and his first daughters are outstanding. He combines strong growth EPD's with Milk, M&G, and REA EPD's that rank in the top 6% of the breed. His dam was a top donor that sold in our 2008 Female sale for \$22,000 and his maternal granddam is the great 1028L cow that has produced over \$200,000 in progeny sales." Uniformity, birth weight and female production are to be gained out of these Holden genetics. INB J366 is in the top 5% of the breed for milk, the top 15% of the breed for 200 day weight, the top 21% of the breed for 600 day weight and the top 9% of the breed for EMA. Quality genetics on offer here.

Lot 54 - INB J111 is sired by HH Advance 1098Y and the following is what Jack Holden has to say "1098Y topped our 2012 sale at \$102,000 to Harrison Cattle Co. and Flying S Herefords. He is a heavily pigmented, powerhouse performance bull out of one of our very best cows. He is a trait leader for Calving Ease, Milk, M&G, and REA EPDs. His progeny are very well marked, long bodied, thick and stylish. He is backed by one of our very best cow families and his maternal granddam produced over \$250,000 in progeny sales. He is a great prospect to help carry on the tradition of the 8050U line of cattle in our herd." 1098Y is certainly performing in the Ironbark program on the above description. I am a great believer in these genetics; they are time measured cattle with worldwide acceptance. Uniformity is a trademark of these cattle. INB J111 is in the top 3% of the breed for milk, top 15% of the breed for 200 and 400 day weight and the top 10% of the breed for 600 day weight. His dam is a Nashdale bred cow with a milk figure of +15.

Lot 65 - INB J362 is sired by Mawarra Yesteryear, purchased at the Hereford National for \$30,000 and is sired by Cootharaba Magnum, a breed leading Australian bred sire. Yesteryear has an outstanding line of high performance sons on offer and is bred out of a strong cow base which is our strategy on sire selection. Yesteryear stamps his progeny, they are all one type. INB J362 is in the top 20% of the breed for 200 day weight, the top 10% of the breed for 400 day weight and the top 4% of the breed for 600 day weight. INB J362's dam is a Ribstone bred cow with a milk figure of +14.

Lot 80 - INB J054 is sired by INB 603 Home Builder A481 who was sold in the 2007 sale for \$11,000. We have since purchased this outstanding sire and he stands at Ironbark today. A481 is a half brother to INB B220 who sold in the 2008 sale for \$30,000 to Noel & Liz Cook, Kindon Station, Goondiwindi, Qld. In the 2011 sale INB Rambo E009 sold for \$16,000 to Hylands Hereford Stud, Cootamundra NSW. In 2012 Sale INB F509 sold to Noel and Liz Cook for \$12,000. In the 2013 sale INB G692 sold for \$14,000 to Mike and Belinda Norton, Glen Innes NSW. In the 2014 sale INB H301 sold to Michael Hickey at Guyra, NSW for \$10,000. The dam of these bulls, INB W521 is without a doubt the leading producer in the Ironbark program. There are a run of great cows back through her pedigree. INB J054 is in the top 4% of the breed for 200 day weight, the top 6% of the breed for 400 and 600 day weight. His dam is a Neon bred cow – a proven sire line in the Hereford world.

Lot 82 - INB J047 is sired by HH Advance 1098Y and the following is what Jack Holden has to say "1098Y topped our 2012 sale at \$102,000 to Harrison Cattle Co. and Flying S Herefords. He is a heavily pigmented, powerhouse performance bull out of one of our very best cows. He is a trait leader for Calving Ease, Milk, M&G, and REA EPDs. His progeny are very well marked, long bodied, thick and stylish. He is backed by one of our very best cow families and his maternal granddam produced over \$250,000 in progeny sales. He is a great prospect to help carry on the tradition of the 8050U line of cattle in our herd." 1098Y is certainly performing in the Ironbark program on the above description. I am a great believer in these genetics; they are time measured cattle with worldwide acceptance. Uniformity is a trademark of these cattle. INB J047 is in the top 3% of the breed for milk, he is low birth weight and ideal for heifer joining.

Lot 89 - INB J305 is sired by HH Advance 0002X who was brought to Australia by Vern Younger. The following is what Jack Holden has to say about this outstanding sire "0002X topped our 2011 sale at \$55,000 for ½ interest to Le Force Herefords. He has truly exceeded all of our expectations in his great combination of calving ease, growth, maternal and carcass strength. He is a proven heifer bull whose progeny also have power, rib, eye appeal and extra length. He is a trait leader for Calving Ease, BW, Milk, M&G and Scrotal EPDs along with \$CEZ, \$BMI and \$BII He has average progeny ratios of BWR 95.3; NR 100.3; YR 100.4. He has been used AI on many Angus heifers with great success. We have sold 13 sons for an average of \$28,000 and his first daughters are now in production and they are awesome. Look for lots more from this great young sire that combines what we all need in the beef industry." INB J305 is in the top 1% of the breed for milk, the top 11% of the breed for 600 day weight. His dam is a highly rated High Energy/57U bred cow with a milk of +20.

Lot 93 - INB J542 is sired by HH Advance 9169W and the following is what Jack Holden has to say "9169W was our selection to retain from our 2009 calf crop. He is a heavily pigmented, long bodied bull with extra eye appeal. He is backed by one of our very best cow families and his first daughters are outstanding. He combines strong growth EPD's with Milk, M&G, and REA EPD's that rank in the top 6% of the breed. His dam was a top donor that sold in our 2008 Female sale for \$22,000 and his maternal granddam is the great 1028L cow that has produced over \$200,000 in progeny sales." Uniformity, birth weight and female production are to be gained out of these Holden genetics. INB J542 is in the top 1% of the breed for milk, and the top 22% of the breed for 600 day weight. His dam is a Northstar/Home Builder bred cow with a milk figure of +20.

Lot 99 - INB J358 is sired by HH Advance 0002X who was brought to Australia by Vern Younger. The following is what Jack Holden has to say about this outstanding sire "0002X topped our 2011 sale at \$55,000 for 1/2 interest to Le Force Herefords. He has truly exceeded all of our expectations in his great combination of calving ease, growth, maternal and carcass strength. He is a proven heifer bull whose progeny also have power, rib, eye appeal and extra length. He is a trait leader for Calving Ease, BW, Milk, M&G and Scrotal EPDs along with \$CEZ, \$BMI and \$BII He has average progeny ratios of BWR 95.3; NR 100.3; YR 100.4. He has been used AI on many Angus heifers with great success. We have sold 13 sons for an average of \$28,000 and his first daughters are now in production and they are awesome. Look for lots more from this great young sire that combines what we all need in the beef industry." INB J358 is in the top 2% of the breed for milk, the top 10% of the breed for 200, the top 15% of the breed for 400 day weight and the top 16% for 600 day weight. His dam is a Jerry/Pepper bred cow with a milk figure of +15.

Lot 101 - INB J239 is sired by Wallan Creek Victory Blend F099 who was purchased for \$11,000, a big powerful outcross sire who is having a major impact in the Ironbark program. There is a group of powerful sons on offer and the bull goes along with our strategy of selecting out of programs with a strong cow base that has stood the test of time over many years. If this strategy is followed uniformity is achieved. INB J239 is in the top 20% of the breed for 200 and 600 day weight. His dam is a Home Builder/Governor bred cow with a milk figure of +13.

Lot 102 - INB J360 is sired by HH Advance 1098Y and the following is what Jack Holden has to say "1098Y topped our 2012 sale at \$102,000 to Harrison Cattle Co. and Flying S Herefords. He is a heavily pigmented, powerhouse performance bull out of one of our very best cows. He is a trait leader for Calving Ease, Milk, M&G, and REA EPDs. His progeny are very well marked, long bodied, thick and stylish. He is backed by one of our very best cow families and his maternal granddam produced over \$250,000 in progeny sales. He is a great prospect to help carry on the tradition of the 8050U line of cattle in our herd." 1098Y is certainly performing in the Ironbark program on the above description. I am a great believer in these genetics; they are time measured cattle with worldwide acceptance. Uniformity is a trademark of these cattle. INB J360 is in the top 6% of the breed for milk, and the top 5% of the breed for 200 day weight. His dam is a Hot Shot/Approval bred cow with a milk figure of +11.

Lot 108 - INB J025 is sired by HH Advance 0002X who was brought to Australia by Vern Younger. The following is what Jack Holden has to say about this outstanding sire "0002X topped our 2011 sale at \$55,000 for 1/2 interest to Le Force Herefords. He has truly exceeded all of our expectations in his great combination of calving ease, growth, maternal and carcass strength. He is a proven heifer bull whose progeny also have power, rib, eye appeal and extra length. He is a trait leader for Calving Ease, BW, Milk, M&G and Scrotal EPDs along with \$CEZ, \$BMI and \$BII He has average progeny ratios of BWR 95.3; NR 100.3; YR 100.4. He has been used AI on many Angus heifers with great success. We have sold 13 sons for an average of \$28,000 and his first daughters are now in production and they are awesome. Look for lots more from this great young sire that combines what we all need in the beef industry." INB J025 is a low birth weight bull ideal for heifers and he is in the top 10% of the breed for milk.

Lot 170 - INB J620 is sired by Mawarra Yesteryear, purchased at the Hereford National for \$30,000 and is sired by Cootharaba Magnum, a breed leading Australian bred sire. Yesteryear has an outstanding line of high performance sons on offer and is bred out of a strong cow base which is our strategy on sire selection. Yesteryear stamps his progeny, they are all one type. INB J620 is in the top 20% of the breed for milk, the top 25% of the breed for 400 day weight and the top 16% of the breed for 600 day weight. His dam is a HH Advance 9169W bred cow with a milk figure of +21 and this is where the Holden cattle shine. Female production will be taken to another level.

Lot 184 - INB J290 is sired by HH Advance 0002X who was brought to Australia by Vern Younger. The following is what Jack Holden has to say about this outstanding sire "0002X topped our 2011 sale at \$55,000 for 1/2 interest to Le Force Herefords. He has truly exceeded all of our expectations in his great combination of calving ease, growth, maternal and carcass strength. He is a proven heifer bull whose progeny also have power, rib, eye appeal and extra length. He is a trait leader for Calving Ease, BW, Milk, M&G and Scrotal EPDs along with \$CEZ, \$BMI and \$BII He has average progeny ratios of BWR 95.3; NR 100.3; YR 100.4. He has been used AI on many Angus heifers with great success. We have sold 13 sons for an average of \$28,000 and his first daughters are now in production and they are awesome. Look for lots more from this great young sire that combines what we all need in the beef industry." INB J290 is in the top 5% of the breed for milk and he is a low birth weight bull ideal for heifers. His dam is a Kaludah Jerry bred cow with a milk figure of +12.

Lot 187 - INB J374 is sired by HH Advance 0002X who was brought to Australia by Vern Younger. The following is what Jack Holden has to say about this outstanding sire "0002X topped our 2011 sale at \$55,000 for 1/2 interest to Le Force Herefords. He has truly exceeded all of our expectations in his great combination of calving ease, growth, maternal and carcass strength. He is a proven heifer bull whose progeny also have power, rib, eye appeal and extra length. He is a trait leader for Calving Ease, BW, Milk, M&G and Scrotal EPDs along with \$CEZ, \$BMI and \$BII He has average progeny ratios of BWR 95.3; NR 100.3; YR 100.4. He has been used AI on many Angus heifers with great success. We have sold 13 sons for an average of \$28,000 and his first daughters are now in production and they are awesome. Look for lots more from this great young sire that combines what we all need in the beef industry." INB J374 is in the top 5% of the breed for milk and he is a low birth weight bull ideal for heifers. His dam is a Nashdale bred cow with a milk figure of +12.

Lot 191 - INB J354 is sired by HH Advance 9169W and the following is what Jack Holden has to say "9169W was our selection to retain from our 2009 calf crop. He is a heavily pigmented, long bodied bull with extra eye appeal. He is backed by one of our very best cow families and his first daughters are outstanding. He combines strong growth EPD's with Milk, M&G, and REA EPD's that rank in the top 6% of the breed. His dam was a top donor that sold in our 2008 Female sale for \$22,000 and his maternal granddam is the great 1028L cow that has produced over \$200,000 in progeny sales." Uniformity, birth weight and female production are to be gained out of these Holden genetics. INB J354 is in the top 1% of the breed for milk, and the top 31% of the breed for 600 day weight. He is a low birth weight bull ideal for heifers. His dam is a Sharka bred cow with a milk figure of +20.

Lot 199 - INB H155 is sired by INB 603 Home Builder A481 who was sold in the 2007 sale for \$11,000. We have since purchased this outstanding sire and he stands at Ironbark today. A481 is a half-brother to INB B220 who sold in the 2008 sale for \$30,000 to Noel & Liz Cook, Kindon Station, Goondiwindi, Qld. In the 2011 sale INB Rambo E009 sold for \$16,000 to Hylands Hereford Stud, Cootamundra NSW. In 2012 Sale INB F509 sold to Noel and Liz Cook for \$12,000. In the 2013 sale INB G692 sold for \$14,000 to Mike and Belinda Norton, Glen Innes NSW. In the 2014 sale INB H301 sold to Michael Hickey at Guyra, NSW for \$10,000. The dam of these bulls, INB W521 is without a doubt the leading producer in the Ironbark program. There are a run of great cows back through her pedigree. INB H155 is in the top 15% of the breed for milk and 200 day weight, the top 9% of the breed for 400 day weight and the top 11% of the breed for 600 day. His dam is a Nashdale bred cow with a milk figure of +15.

Ironbark's efficient recipe

HAYLEY SORENSEN

TWO core ingredients are necessary for success in any field of business, according to Ironbark Herefords studmaster Adrian Spencer – relationships and results. It's on these two principles the famous Barraba stud was forged 80 years ago and continues to thrive.

A family business from day one, the stud was founded in 1933 by Mr Spencer's grandfather E.L. Spencer as a bull breeding unit for the commercial beef operation Ironbark Pastoral Company. It was taken over by Adrian's parents Margaret and David in 1973 – the same year the stud hosted its first on-property bull sale. Adrian, his wife Wendy and children Isabella, Hugh and Ben along with Margaret Spencer now hold the reins after splitting up the operation formerly run with his sister Kerry-Ann Tonkin. Mrs Tonkin and her husband Campbell now run a purebred Ironbark Hereford operation at "Tumlong", Barraba.

It's clear family is a key driver of the Ironbark Herefords operation as well. "We work the business as a family and we love what we do," Mr Spencer said.

He said it was his father, who passed away five years ago, who taught him the craft of producing top-quality sires.

"I learned a lot from my father," Mr Spencer said.

"He was a man who gave himself to the beef industry. He lived for cattle and he taught me more than anyone."

Mr Spencer said he hoped the children would one day take over the operation and continue on in the tradition of the generations before them.

"It gives me a lot of heart to see how interested they are,"

he said.

"The most successful operations in Australia – in agriculture and in the corporate world – most of the time come from family operations."

It's not just about maintaining strong family connections though – Mr Spencer said it was extremely important to keep strong business relationships.

"We're loyal people and we believe in strong relationships," he said.

"That's the key; whether it be with producers, agents – right across the board – it's about relationships."

It's these strong relationships – along with proven results – that keep his clients from all across Australia coming back to Barraba every August. Last year, the Spencers sold bulls to every State and territory in Australia except the Northern Territory and Western Australia.

Mr Spencer said sale day was the culmination of the previous 12 months' hard slog.

"It's a big occasion for us and for the clients," he said.

"People travel a long way to come.

We have an open day the day before and the whole thing takes three days altogether."

It's no small task to get 200 bulls in sale order but Mr Spencer said he, along with his family and employees, relished the challenge.

"It's a busy time but we're fortunate to have a good group of employees who've been with us for some time," he said.

The wider Barraba community, proud to have such a major contributor to the Hereford breed within its boundaries, always pulled together to ensure the event was a success.

"Barraba is a friendly town and the people are always a huge help in making sure the visitors feel welcome," Mr Spencer said.

He said it was his time

Building a herd from abroad

A 12-MONTH stint working at Hereford operations in the US and Canada in the 1980s gave Ironbark Herefords studmaster Adrian Spencer the inspiration and know-how to change forever the course of the breed he loves in his home country.

Mr Spencer said at the time, Australian Herefords were bred to "look fantastic in the paddock but had a real fat problem".

Feedlot yields were low and the gene pool was narrow. "I've always had a vision that we needed to improve cattle and develop an 'industry body' on our cattle," he said.

"That's when we started to bring the new genetics in from the US and Canada."

Imported sires such as the American bull HH Home-builder 603 and Canadian sire GH Neon 17N, both used by Ironbark, have had a major impact on the Hereford breed in Australia.

"We've achieved what we set out to do," Mr Spencer said.

"The Hereford breed in Australia has benefited from the larger gene pool; it's given us faster growth rates."

While the Hereford breed

has come a long way since the 1980s, Mr Spencer (pictured) said there was still work to be done.

"I'm in constant contact with the US breeders and they tell me the Hereford breed is on a high there," he said.

"There's no reason that can't happen here."

Having benefitted heavily from the infusion of foreign genetics, Ironbark is now repaying its debt to the global Hereford fraternity by sharing its genetic progress with the world.

The Spencers have exported Ironbark females to Russia and Kazakhstan where, far from their Australian home, they continue to thrive.

"To hear and see how well they're performing in harsh conditions gives us great confidence in our bloodlines," Mr Spencer said.

"That's the ultimate thing in successfully breeding cattle – seeing large lines reproduce and perform in different environments."

Pictured are Jacinta Pretty, Jindivick, Victoria, with Mr Spencer's children Ben, Isabella and Hugh and the top and second top priced bulls at last year's Ironbark bull sale.

type in one cross."

Mr Spencer said he was entirely focused on producing bulls proven to perform in a commercial environment.

"We don't gauge our success on show ribbons; we have thousands of carcase records from feedlots that show we're at

the top of the grid," he said. The goal was to produce moderate, fertile and adaptable cattle.

"We don't want to have the biggest, fattest bulls," he said.

"We want cattle that can get in calf and don't need as much feed – efficient and profitable."

THE IRONBARK FORMULA

- ◆ Maintaining good relationships with clients and staff
- ◆ Hard work
- ◆ Strong results with a focus on commercial operations

HOW TO DEHORN - A SIMPLE PROCESS

The top horn holding position.

The bottom horn holding position.

For bigger calves use pipe dehorner or large metal square scoop dehorner - stainless steel, opening 6.5cm, length 45cm.

For smaller calves use knife with double sided blade enabling operator to cut away from ears. Quality steel allows user to do up to 400 calves in one sharpening.

Very important - Note a ring of skin around the horn.

BLOODLESS DEHORNING

Dehorning Irons are made from Stainless Steel. Their sizes range from ¾ inch, 1 inch, 1 1/8 inch, 1 ¼ inch, and 1 ½ inch.

The key is to have the iron extremely hot. The iron is applied for 8 seconds followed by a twisting motion.

Clarke Pro Branding Fire Box. Larger opening than most forges to allow placement of branding iron.

Notes

Notes

What makes a successful livestock business?

Understanding the why and how of the livestock industry is bred into those involved. There is no substitute for hands on experience in the field, whether as a producer or as an agribusiness provider. Our local team of livestock professionals are trained to assist you to deliver the best from your business, whether that be by providing access to a range of livestock finance options, livestock and wool marketing opportunities including AuctionsPlus, or assistance from our wider team. Elders Makes More Possible.
