WELCOME TO BEN NEVIS

Tough as old boot leather seasons and an emerging quality premium system has challenged us to create unique bulls for our clients whose progeny thrive in grass based production systems, yet hang up at the premium end of the scale with more IMF.

To do this we have blended outcross growth genetics like Rachis, Jack's Joker and Gamemaker with proven, premium carcass and calving ease sires like Ayrvale Bartel, Te Mania Infinity and Cherylton Stewie.

What interests us is animals that outperform the others when they are all treated the same. An example of this was Ben Nevis Judo, purchased for \$12,000 at our 2014 sale by Pete Stevensen at Warrabah Station. Judo scanned at the top of his large contemporary for IMF and second for growth, while posting a below average birth-weight. Thanks to Pete Stevensen's generosity we collected Judo and used him and Ayrvale Bartel over our heifers. The Judo progeny stand out in this draft of bulls being similar to the Bartel's at birth, but out-weighting them and out-scanning them for IMF and P8 fat.

Given that Bartel is the star of the latest Angus Sire Progeny Test cohort, this gives us confidence that we are not only providing our clients with proven genetics, but also new genetics with the backing of actual performance.

As well as type, pedigree and EBV's we also use contemporary group data to find other bulls across the Globe. Connealy Comrade topped his 400 contemporary group for IMF and growth in the US and we were one of the first to sell his bulls in Australia. He is now the most used bull in the US and gives extra shape, doing ability off grass and a docile nature.

Similarly Cherylton Stewie was the standout in the fourth Cohort of the highly regarded Angus Progeny Test for across the board growth and carcass performance. His bulls will headline the Sale, standing out for their consistent type, being big, thick and deep.

Bulls were meant to work as yearlings and this year has been the ultimate test. We work them harder than most, joining over 1,000 cows in the hills of Walcha, but now our yearling bulls have worked in drought – from Cooper Pedy to Alice Springs and North of Rockhampton. The benefits are real – they adapt better, they are easier to manage and work, have less breakdowns, more calves per lifetime and a longer working life. This equates to massive savings on cost per calf.

We hope we can help you with your bull needs. We encourage you to inspect the bulls pre-sale, or join us on sale day.

Stu and Erica Halliday and family

THANK YOU

This is a fifth generation family operation, we would like to thank dad and mum (Bruce and Cherry Steel) for breeding award winning cattle and entrusting us with their care as well as instilling in us a lifelong passion for the beef industry. Thanks to Stu Hobbs who has gone above and beyond – we are very grateful that he and Kylie have made Ben Nevis their home. A big thank you to Megan Scrivener, the most talented, efficient, tolerant graphic designer I know. To Lionel Lockyer, my wonderful sister Kylie Steel (who actually listened at school and knows how to use a comma), and our combined kids – Bonnie, Jack and Mags. To our friends who make such a big difference – Jo van Elten, Ruth Frater, Roger van Den Hoek, Chook. Dooley you give the best, most practical advice – you are a legend. Ben Simpson, a brilliant combination of a professional and hoot. Thanks to Sam Martin of Elders and to the clan at Landmark, especially Matt and Simon – a big thank you.

THIS YEARS BULLS

There has never been a better time to invest in quality

POWERFUL, EASY-DOING, GRASS SIRES

There's nothing better for flavour and juiciness than an Angus derived, grass fed, seasonal steak and we see a premium market developing for this product. For our clients producing this grass-fed product and for breeders in North Queensland and Central Australia, we have selected specific bulls to suit this trade. Australian bred sire Cherylton Stewie is one such bull, and while scorching the prestigious Angus Progeny Test for all round growth and carcass performance, he also has produced the big, thumping, easy doing weaners despite the toughest season ever. While growing fast they maintain body condition giving beef producers higher turnover and market flexibility. This is a real cattleman's bull and his daughters will be treasured by stud breeders into the future.

HIGH INDEXING, PREMIUM MARBLING BULLS

We have maintained our high indexing lines to suit the premium Jap B3 and Supermarket trades. In the past year Bartel has taken centre stage as the next hero of the Angus Progeny Test and is unmatched for his combination of proven carcass, calving ease and growth. This is our third line of bulls by him and the Bartel females here are super. This will also be our second line of bulls by US sensation Connealy Comrade who has produced super docile, easy calving and heavy muscled sons. He is the most used bull in the US at present. Our own high performance sires include Judo (who out ranked Bartel in scans and growth in the contemporary). Look at the data – the Judo line-up is the strongest in the sale and all are out of heifers.

LARGE LINES OF BULLS FOR HEIFERS

There are large lines of heifer bulls chosen for a combination of their shape and low birthweight, but who have also met strict growth criteria. Sire lines suitable include: Judo, Connealy Comrade, Ayrvale Bartel, Javelin and Poss Total Impact but check individual data to get the right bull for your requirements.

PREPARATION

The bulls have been early weaned using the innovative AIM protocol, which is claimed to improve rumen development for life. We have been using this system for ten years now and are delighted with the results. Combined with genetics our yearling bulls average over 500kg and up to 650kgs – so are fit, strong and ready to work.

We are happy to blood bulls and give three day vaccine for bulls sold to Queensland and will work in with you for the best delivery time so they adapt.

WHY RAW DATA?

A summary of EBV's and raw data is compiled on Page 7. Most studs don't include their raw data from their contemporary groups, but we strongly believe there is no use using BREEDPLAN if we are not striving to make real differences in our actual performance. Yes, each year is different, but if over five to ten years you are not making actual progress then you have deceived yourself.

We combine raw data within contemporary groups with EBV's to select our own Stud Sires and Donor Cows, so we feel this information should also be available to our bull buyers. You must bear in mind that from our 230 stud cows (and 1,000 cows in total) we have chosen 1/3 of their progeny as bulls, so we have already used raw data and visual appraisal to apply vigorous selection pressure on this elite group.

WHAT IS A GENETICAL?

A genetical is our term for describing animals with the same combination of Sire x Maternal Grand sire (Sire x MGS). Geneticals give people more options when choosing their bulls, ie if they miss out on the one they want there are other bulls bred similarly that could work, or it helps clients put together groups of bulls that are similarly bred and join them to larger mobs of cows to increase uniformity.

SALE INFORMATION

SALE DATE AND PRIOR INSPECTION TIME

Selling will commence at 1.00pm on Tuesday 6 September 2016. Undercover shelter is provided. Bulls may be inspected from 10.00am on the morning of the Sale, or at any other time by arrangement with the agents or vendors.

SELLING SYSTEM

Sale of the animals will be conducted under normal auction conditions. Please check with the Selling Agents to obtain a buyer's number if you are considering making a purchase. Successful purchasers are requested to give written advice to the Selling Agents regarding transport arrangements at the conclusion of the Sale.

FREE DELIVERY

We will provide free delivery within 300km radius of Walcha. Please inform us if you need this on your Buyer's Instruction slip. If you purchase five or more bulls we will delivery free of charge to Queensland, Northern Territory, New South Wales, Victoria, South Australia and the Australian Capital Territory. Please contact us directly to arrange.

REBATE

2% rebate to outside Agents registering BULL BUYERS, in writing, '24 hours' PRIOR to the Sale and settling on their behalf within seven days of the date of Invoice.

PHONE BIDDING

The Sale will also be on AuctionsPlus or contact the Selling Agents.

CATERING

Catering will be supplied by the Walcha Lions Club including steak and sausage sandwiches, tea, coffee and cold drinks.

PHYSICAL EXAMINATION OF BULLS

All bulls have passed a semen test and physical examination by Dr Chris Hallet, Coolah Veterinary Clinic including;

- Semen motility
- Palpation of internal genitalia
- Palpation of Scrotal contents
- Visual inspection of overall structure, including feet
- Visual inspection of locomotive ability.

MANAGEMENT

We take great pride in our established reputation for quiet cattle. These yearling bulls have had consistent contact with humans and dogs since weaning.

The bulls have been handled with dogs, horses, utilities, ATVs and on foot. We know each bull's temperament and are confident that under normal circumstances they are of sound temperament. However, these are still animals and we ask that you treat them kindly and with respect, especially on Sale day with the pressures of new people invading their space.

HEALTH

The bulls are ready for immediate use and we recommend using a yearling bull at a rate of 1 to 35 cows in their first year and 1 to 50 for every year after.

All bulls have been tested PI (pestivirus) negative and vaccinated with 7 in 1 (Lepto), Pestiguard and Vibriosis. They have had regular doses of Vitamin A, D, E, Vitamin B12 and drenched with Fasinex Oral and Cydectin LA on 25 August 2016. Bulls sold to Queensland will be blooded and vaccinated for three day sickness at our expense.

GST

All animals are sold excluding GST.

INSURANCE

Bulls are like any other piece of valuable farm equipment and it's wise to insure them, especially for the first six months of their working life. There are a number of options available through CGU and WFI at the Sale venue.

REGISTRATION

Ownership transfer of bulls will be registered by the vendors with Angus Australia, provided accurate transferee details are supplied with the Buyer's Instruction form.

RECESSIVE GENETIC CONDITIONS

All bulls over a 10% risk of being a CA, NH, AM or DD carriers have been tested with published results in the Lot information. We do not consider these to be significant commercial issues, but clients wishing any further information are welcome to contact us at any time.

SEMEN RIGHTS

All bulls sell with 100% semen marketing rights. Ben Nevis reserves the right to collect up to 200 straws of semen from any bull in the Sale for use within our herd. Any semen collection would be at the vendor's expense and the purchaser's convenience.

Lots marked in this catalogue with this symbol have had semen retained by Ben Nevis Angus Stud.

WARRANTY

The vendor warrants that:

Bulls are fertile and capable of natural service within six months of the date of Sale to the purchaser (Warranty Period).

The vendor will either:

1. Provide a satisfactory replacement; or
2. Provide a credit for use at the next Ben Nevis Angus Bull Sale equal to the purchase price (excluding any costs and expenses of the purchaser in taking delivery) minus salvage value.

Where:

1. The purchaser claims a bull is infertile, upon purchaser submitting a Veterinary Report stating the bull is infertile or incapable of natural service, and a Statutory Declaration by the purchaser to the effect that the substance of the report is true and correct. The Veterinarian must state that in their opinion there is no evidence that the bull has suffered any injury or illness during the Warranty Period which could have affected his breeding ability. The Veterinary Report and the Statutory Declaration must be forwarded to the vendor within 14 days of the Warranty Period expiring.

BULL HANDLING

On arrival at their new home it is important a suitable mob of animals is yarded to greet the bull to minimise his stress. Suitable animals include pregnant cows, steers, but certainly not other bulls.

The bulls are in good joining condition at the point of Sale, but it is imperative to ensure good nutrition for the bull during the joining period. You should check bulls regularly to see they are working, especially in the early stages when most problems occur and early intervention can minimise the damage to the bull and conception rates.

After joining, bulls should be drenched and placed on good pasture to get back into good condition.

HEALTH AND SAFETY OF VISITORS AT OUR SALE (RULES AND ADVICE)

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances; however there are inherent risks associated with cattle handling.

VISITORS ENTER THE CATTLE PENS AT THEIR OWN RISK. CHILDREN MUST NOT ENTER THE YARDS.

People entering the yards are at risk of injury. Be especially alert for bulls fighting and if one is playful with you, do not respond by patting him on the head. What a bull considers playful may cause you injury. We do not expect the bulls to be aggressive with humans, but Sale Day places extraordinary pressure on them. Remember, even the quietest bull is in fact an unpredictable animal.

Do not crowd the bulls or loiter inside the pens. We cannot cover every example of the dangers of cattle handling so please use common sense and be alert at all times. Don't enter the pens unnecessarily and if you do feel threatened please do not act hardy. To use Ross Thomson's words "the stigma of a person screaming as he dives over a fence is a preferable option to a broken body resulting from "standing up" to an unfamiliar beast".

Please call on any of the Landmark Agents for an escort through the bulls if required. The days of bravado with stock have passed under current WHS legislation.

All persons who attend the sale do so at their own risk and the vendor assumes no liability, legal or otherwise, for any accidents which may occur. All reasonable care has been taken to provide correct information in this catalogue; however the vendor assumes no liability legal or otherwise for typographical or other ERRORS that occur in this catalogue and do not assume any responsibility for the use or interpretation of the information provided.

YEARLING BULL INFORMATION

Information on the benefits of using yearling bulls can be found on page 6, or visit our website www.bennevisangus.com.au.

Heifer Bulls Just because he is a yearling bull does not necessarily make him a heifer bull. As with any bull, his effect on birthweight is determined by genetics. The other factor on birthweight is environment, especially nutrition.

We do have lines of bulls recommended for calving ease in the Sale. These have been selected due to a combination of their low actual birthweight within their contemporary, their pedigree, EBV's and shape. Many are out of our first calf heifers that calved unassisted. Genetics, being what it is, is impossible to guarantee calving ease but there are a number of factors we can employ to reduce the risk of dystocia. For more information on Calving Ease Management please go to our website www.bennevisangus.com.au for an article by Stu Halliday BVSc (USyd) MVSt (UQ).

AM I NOT PRETTY ENOUGH?

The Real Benefits of Yearling Bulls

Stu and Erica Halliday

Nature intended bulls to work at 12 – 14 months of age. This is when they become sexually mature but they're still light and agile so they can learn their new trade without a high risk of injuring themselves. This is not the case for bulls first used as two year olds who are often fed up to big weights for auction and therefore run a higher risk of injury while gaining sexual experience.

LOWER COSTS PER CALF

According to research by NSW Agriculture in the 1990's bulls used as yearlings not only have a lower incidence of breakdown or injury but a proven longer working life. This equates to:

- More calves over a longer period and,
- Lower costs per calf

	Average price	Average working life	Number of calves	Price per calf
Average yearling at auction	\$4,500	* 5 Years	230 <i>(30 in year one, 50 thereafter)</i>	\$20
Average 2 year old at auction	\$5,500	* 3 years	150	\$37

* Statistic taken from NSW Agriculture Better Bull Buying, edition 1996

EASIER TO MANAGE

At Ben Nevis we have been using yearling bulls for over 20 years. Our experience is backed by our clients and suggests that bulls used as yearlings are much easier to manage both in and out of the cows. Why? We believe it's because they are out working as their testosterone kicks in instead of being in a big mob with other bulls learning to fight and bully out of sexual frustration.

AM I NOT PRETTY ENOUGH?

Because yearling bulls are working and still growing (they can get a little too enthusiastic about their work) they can come out of the cows looking ragged. Rather than a bad sign it's a good sign that he had been working for you. They don't need special treatment just a good paddock and a dose. If not fed up at this stage (ie put on rye grass) then he will still eventually recover but probably won't make his mature weight potential until he is 3 or 4 years of age (if at all). The up side of this is that less stress is placed on his skeleton for life so he will always be more agile and less injury prone. In the words of reputable cattle producer and educator Sandy Yeates. "If our beef industry is to make progress, we must purge our minds of the belief that a bull has to be fat and well grown to be any good. The value of a bull should be measured by the performance of his offspring, not on what he looks like".

CAN I REACH A COW?

Short answer is yes, but the laws of physics apply and you should use well grown yearling bulls. Most of our bulls go over cows. Angus by nature have high libidos and are very resourceful.

HEIFER BULLS

Just because he is a yearling does not make him a 'heifer bull'. As with any bull his effect on calving ease is determined by genetics for birthweight and shape and other factors like nutrition and environment. However suitable heifer bulls used as yearlings will mean less injuries in heifers as well, due to their lower weight and they can be used over heifers for more years as they take longer to reach their mature weight.

HEALTH

Not everyone can produce yearling bulls. It is critical that the bulls are rigorously culled and well grown and that they are tested for reproductive soundness. To ensure this we employ a disciplined weaning, nutrition and bull education program to ensure they are:

- Extremely docile and manageable
- Well grown (averaging 500kgs + at 12 months); and
- Sexually mature with scrotal >30cm at 12 months and semen tested.

GUIDELINES FOR USE

Don't put yearling bulls out with older bulls or bulls that are significantly bigger in size in the first year. These bulls will significantly injure him while he is learning to serve.

In our commercial herd we put groups of yearling bulls out together and often put four brothers in with a mob of 100 cows. This has improved not only our conception rates in some of our steep, rugged country but also increased the uniformity of our calves and reduced the calving spread. Despite the large distances and terrain there is always someone on duty.

Other guidelines:

- Join to 35 females in the first year and normal levels thereafter
- Join for no longer than six weeks
- Make sure he is up to date for Parasites, 5 in 1
- Added boosts come from Selenium, Vitamin B12 and Vitamin A, D and E shots

Eventually your yearling bull will grow into a bull we can be proud of because of his calves, his contribution to your gross margin and his dashing good looks. With the money saved this can be put towards buying an even higher performance bull in the future and maximising genetic gain.

2016 SALE SIRE LINES

CHERYLTON STEWIE

Proven, predictable and explosive performance based on the Angus Progeny Test. Right in the pocket to produce thumping calves off grass that will hang up with excellence in the lucrative, high quality, domestic and export trades. Docile, big frame, easy-doing and powerful.

REMITALL RACHIS

Hands down one of the best sires we have used with the ability of his progeny to be born smallest, grow fastest, be the fattest and heaviest in the paddock. As an outcross he has given us a unique edge. Imported by DSK, Rachis features in the pedigree of over half the bulls in the catalogue and is the sire of Judo and Javelin.

BEN NEVIS JUDO

Purchased for the second top price in 2014 by Pete Stevensen at Warrabah Station, Judo was the highest performing bull for growth and IMF in that 2013 contemporary. We have compared him head-to-head with Bartel, and his calves have out-weighted them and out-scanned them for IMF, Fat and P8. In addition they are extremely docile with great skin and doing ability. Judo is a genetical (same Sire x MGS combination) to Lots 19 and 25 (pictured), and Sire Javelin.

JSR JACKS JOKER

By Impact out of arguably the best DSK Panda cow in the country (by Rachis), Joker has bred the house down here. Superbly docile with thumping big hindquarters and exceptional scan results for IMF. Lot 4 is the highest scanning bull in the entire contemporary for IMF, scanning a whopping 6.8% at eleven months of age, with a ratio of 123.

GAMEMAKER

Our old favourite, chosen because of his own performance topping the 2011 contemporary for both IMF and growth. We flushed his mother with full brothers never selling for less than \$10,000. His sons weigh like lead.

CONNELY COMRADE

The highest ranking bull in his 400 contemporary for his combination of growth and IMF. Superb disposition, calving ease, temperament and muscle shape and the most used bull in the US at present. We were the first to use him in Australia.

We didn't say anything at the beginning because you would have all just sat there and watched Chook instead of bidding, but the guru out the back bringing the cattle in is LSS guru Chook Kealey. If you want to know more give Chook a call. Quiet cattle and happy people are really important to us, and this course was magic.

Chook Kealey grew up on a cattle and farming property in the South Burnett region of Queensland before spending the next eight years training performance horses for a variety of events.

North West Queensland was home for the next seven years in a number of roles – from stock camps where helicopter mustering was a weekly occurrence, through to managing large mobs in intensive cell grazing operations. Walcha in the New England of NSW is now home, where he runs a sheep and cattle.

A passion for animal psychology got him involved in Low Stress Stockhandling, however it is the amazing impact on people's lives that gives him the greatest enjoyment now.

Chook Kealey

CALVING EASE MANAGEMENT

Stu Halliday BVSc MVSt

If you have problems at calving you risk losing the calf and the heifer, but the hidden costs are sometimes even greater. These include the sub-clinical effects of poor colostrum transfer and milk production plus more difficulty getting the female back in calf due to infections, prolapses and stress.

It's easy to entirely blame the bull if you have a poor calving in your first calf heifers. However, in reality genetics accounts for only forty percent of what you see in a calf, and half of that comes from the female. A massive sixty percent of what you see in a calf is environmental. The good news is that we can control many of the environmental effects and we can also steer genetics in the right path to give the heifer the best chance of calving easily, producing a thriving calf and quickly re-breeding.

CONTROLLING THE ENVIRONMENT

We break the environmental effect into two components.

The first being the environment around the calf in utero including how well grown, strong and healthy their mother is, as well as how nutrition has impacted on the calf for the three trimesters of pregnancy. The second component is the external environment ie the nutrition/pastures and conditions in the fortnight leading up to calving and their effect on the metabolics of the cow and her subsequent ability to push the calf out.

In short, a two year old heifer will have the best chance of calving if she has reached at least 75% of her mature weight (85% is better), by the time she calves. Given that nutrition diverts strongly in the last trimester of pregnancy to the unborn calf, it is critical that the heifer does most of her growing in the first trimester. This fits logically if calving patterns are matched to seasonal conditions ie for us Spring/ Summer is the first trimester, and winter is 3rd trimester. What it doesn't mean is to starve a heifer in the last trimester as this will only serve in making the heifer weaker.

In the period leading up to calving the key message is that lush, heavily fertilised, green grass (or crop) is the enemy, particularly short grass. The reason for this is that it is rich in nitrates and high in potassium and these affect the ability of muscles to function.

Of course two of the biggest muscles in the body at calving are the uterus (needed for strong contractions to push the calf out) and the rumen (needed to give the heifer the energy to get through the process). So excess nitrates and potassium lead to poor muscle function leading to what we call 'lazy heifer calvers', or technically speaking, hypocalcaemia.

What you will see clinically is dead calves or paralysed heifers because the calf has been in the birth canal too long, or calves that you pull easily and the heifer has just run out of puff. Then you get subclinical effects including prolapses, poor presentations, infections and poor colostrum transfer.

HOW TO FIX LAZY HEIFER CALVERS

Ideally heifers should calve in dry natural pastures that have plenty of bulk and energy. When we can, we leave a paddock in Autumn/Winter to bulk up and frost. Sometimes this is difficult but you can work with what is there. If you have no choice but to put them on green, short or highly fertilised pastures then you need to try and balance the nitrate/potassium (N/K) challenge in the fortnight leading up to the point of calving. At the very least this may mean supplementing the heifers with rough hay (straw, wheaten, oaten, sorghum)- not lucerne or silage as these too are rich in N and K.

At best you should supplement the heifers with the rough hay as well as a Magnesium based lick, pellet or block. This will negate the N/K effect on muscle function and allow her to mobilise the calcium from her bones for strong contractions, extra energy and good colostrum transfer giving the heifer her best chance to get the calf out, whatever the size.

Magnesium based licks are commercially available in a pre-calve lick or pellet and most cost effective if you have the ability to early preg-test your heifer mobs and split them into calving groups three weeks out. It's an easy positive cost benefit if you can deliver more live calves and have more live heifers (it doesn't take many extra of those to make a big difference). The extra bonus is healthier and bigger weaners and increased first calf heifer re-conception rates.

JOKE

**Told to me by the master joke teller,
my brother-in-law Andrew Geddes.**

Three bulls are talking in the paddock about a new bull that is being delivered that day.

"He's not getting any of my cows", said the first bull. "Me either", chorused the other two puffing themselves up.

Later that day the truck arrives and a massively, gigantic bull saunters down the loading ramp.

When the first bull sees him he says "Umm - he can have some of my cows." When the second bull sees him he says "he can have ALL of my cows!". Then the third bull puffs up, roars and starts pawing at the ground. "What are you doing?" hissed the other two. "He's going to kill you!"

"I'm just letting him know I'm not a cow!" he said.

BUYER'S INSTRUCTION SLIP

BUYER NUMBER

Ben Nevis Bull Sale – Tuesday 6 September 2016

Please note, verbal instructions will not be accepted.

Full Name:

Company Name (if applicable):

Address:

Postcode:

Mobile (must be included):

Phone:
