# SALE INFORMATION

## CATTLE HEALTH:

- All sale bulls tested negative for pestivirus.
- All sale bulls vaccinated 7 in 1.
- All sale bulls have been semen tested (Mid December 2015) by Drew Pickford Nationwide Artificial Breeders, and passed to a minimum standard for natural service.
- Adameluca Angus is MN2 status.

## INSURANCE:

We recommend you insure your new investment, at least for transit and loss of use for the first joining season. Please see Agents for any insurance requirements.

## GUARANTEE:

In the event of a bull proving to be infertile for natural service in the first 6 months from sale date, the vendor will offer to supply a suitable replacement (if available), or credit the purchase price (less any salvage value of the bull) to be used at the next sale. This is provided the problem is not caused by injury or disease since sale day. Any claim must be accompanied by a relevant Veterinary certificate.

## INSPECTION:

Bulls are available for inspection at Beef Week Field Day, Saturday 30th January 2016, from 9:00 am – 5:00 pm, or from 10:00 am Sale Day.  
Inspection can also be arranged by appointment, contact Sam.

## SAFETY:

All Sale bulls have been screened for safety and are quiet to handle under normal circumstances. However, sale day places added pressure on them, so use caution and be alert of fighting bulls. Visitors enter cattle pens at their own risk, Children must not enter the yards.

## TELEPHONE BIDDING:

If you would like to bid by phone, contact the agent of your choice, no later than 8pm Thursday, 25th February 2016.

## TRANSPORT :

No transport will take place on Sale Day unless organized prior with Sam. Remember on arrival at your property you should have a few steers or cows in the yards to help your new bull settle in.

## OUTSIDE AGENT :

2% Rebate paid to outside Agents, introducing buyer, and settling within 7 days.

**Disclaimer:** Any persons entering this property for any purpose what so ever including the attendance at cattle auctions do so at their own risk. We are not liable to you for any personal injury or death suffered by you and for the theft, loss or damage to any property caused or contributed to by us or by negligence deliberate act or unlawful conduct. "We" or "us" or "our" refer to the owners their employees contractors or agents and each of them. Whilst all care and attention has been paid to the accuracy in the compilation of this catalogue, neither the vendor nor the agents or representatives thereof assume any responsibility whatsoever for the correctness use or interpretation of the information included in this sale catalogue.

# WELCOME TO ADAMELUCA ANGUS

On behalf of the Adameluca team I would like to extend a warm welcome to our third annual Bull Sale.

This year we are excited to offer 34 bulls including a great line up of our first sons sired by Irelands Galaxy G43 who has bred beyond our expectations. We have joined him with our foundation herd of females that were purchased from various studs and dispersals.

In return, he has given us a very even type. In addition, we are offering bulls sired by trait leading sires such as: Carabar Docklands, Coonamble Elevator E11, SAV Thunderbird, Ayrvale Bartel E7, Dunoon Gabba and Flag Cross Country.

We have also completed genetic testing on all bulls that were suspected carriers.

As we are now beginning to see Adameluca bloodlines enter weaner sales, we have been impressed with their quality. The positive feedback from clients has been overwhelming.

Once again I would like to thank Barry and Joy Godbolt for their ongoing dedication and support. Also, we would like to take this opportunity to thank our clients, bidders and acting agents from previous sales for their support.

We appreciate your interest in our program and look forward to catching up with you on sale day.

Regards

*Sam*  
Sam Trovattello

Congratulations to the Shea family (Barfold Beef) on being awarded the 'Best Presented Pen' and receiving the top price of \$1,280 p/head at the Kyneton Weaner Sale 2016.

*Pictured: Sam with Ray Shea and grandson Charlie*

### IRELAND GALAXY G43 COMMENTS:

After an extensive search Galaxy was the bull we selected to be our foundation sire at Adameluca. He has produced such a consistent and even line out of a mixed group of cows & heifers from various studs. His heifers are now at joining age and we couldn't be more excited at how they have developed.

He is represented in this sale by 25 sons and he has certainly stamped all of his sons with refinement through the front end combined with width and depth of body.

We believe he has sons catalogued that are well and truly worthy to stand at stud with the balance being top of the breed commercial sires.

Ben Simpson

## Bringing Your New Bull Home

BRINGING YOUR NEW  
BULL HOME

PURCHASE

DELIVERY

AFTER PURCHASE TIPS

ARRIVAL

MATING NEW YOUNG  
BULLS

MANAGING OLDER HERD  
BULLS

DURING MATING

NORTHERN AUSTRALIA

When purchasing a bull, care and handling after the sale can be as important as the purchase itself. Looking after your bull well during the initial stages of his working life may ensure longevity and success within your breeding herd.

### Purchase

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament

shown in the ring.

### Delivery

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering.

### After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.

- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed. Treat bulls kindly—your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

**If you use a professional carrier:**

- Make sure the carrier knows which bulls can be mixed together.
- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

**Arrival**

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning .

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later.

Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

### **Mating new young bulls**

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

### **Managing older herd bulls**

Older working bulls also need special care and attention before mating starts. They should be tested or checked

every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition

### **During mating**

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

### **Northern Australia**

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

### **Adaptation**

They key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

### **Purchase in cooler months**

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

### **Change of feed source**

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

### **Managing Cattle Ticks**

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.
