48	144869	17/9/14	69	79	3

We have a selection of Amarula Rams that are showing the characteristic Amarula traits of length, growth, balance and a lot of muscle in the back end where it counts.

The rams were shorn in August, for our Dorper Course and classing. The hooves have not been trimmed. What you see is what you get.

As much information as we can has been provided. If you don't understand the Lambplan ASBVs, please ask.

Stud rams from this group have been sold at the National Sale.

Many of these Type 3 rams have potential, in our opinion, to be Stud Rams with further development.

Many Type 3 rams have superior production or other traits.
