WELCOME TO OUR 2016 WA 5TH ANNUAL PRODUCTION SALE

This year's Sale will once again kick off Angus bull sales in Australia. This year we are a little earlier on January 15, 2016 at 'Woolahra,' 3159 Springdale Road at 1pm. For those that don't know where 'Woolahra' is but would like to come for a look we are located between Esperance and Hopetoun looking over the Southern Ocean, it's a beautiful part of the world and a great place to run Angus cows.

Over 100 18-Month Angus bulls that average in the top 10% for both Domestic Index and Heavy Grain Index sell!

Once again we will offer 100 18-month old AI/ET bred performance bulls. Please note we are selling the bulls by auction through the sale ring this year. The Sale will also be interfaced with Auctions Plus for any people wanting to bid remotely.

There are some cracking bulls this year and over 70 rock-solid calving ease bulls for those mating heifers. **All bulls average in the top 10% for both Domestic and Heavy Grain Index's.** They are a powerful and unique group of genetics – well below average birth weight, significantly faster growing at both 400 and 600 days, yet still breed average for Mature Cow Weight plus much more muscle and marbling. They are a good 'showcase' for performance genetics and practical animal breeding. Sires of this year's Sale bulls include Ayrvale Bartel E7, Lawsons Novak E313, GAR Anticipation, GAR Prophet, Dunoon Goodthing and Lawsons NZ 09104.

A feature of our WA 2016 Sale is the 50 sons of Ayrvale Bartel E7, who continues to create new milestones across Australia. Lawsons Angus purchased Ayrvale Bartel E7 in a syndicate when he was the same age as these Sale bulls and he has gone on to be the most popular sire

in the country and is leased to Genetics Australia. There are over 3,500 registered Angus calves sired by Ayrvale Bartel E7, with around 50% of these bred by Lawsons Angus! This is a great example of how our program identifies the top bulls in the world and multiplies these sires through our large scale AI/ET program. Genetic progress is simple, it relies on identifying elite proven sires, multiplying these out, tough selection parameters on both bulls and females and then turning generations over, as the younger animals will on average be a superior 'model'. It sounds simple and it can be if you stick to a plan.

Planned breeding program in WA results in over 850 cows PTIC to AI in 45 days.

We have now been total AI/ET for over 20 years, with every female in the herd individually mated. Our spring WA 2015 AI program was hugely successful with over 850 registered Angus females pregnant to AI over 45 days; with 86% of cows and 84% of heifers PTIC to AI in 45 days. Mature cows mobs averaged 90% with no follow up sires! This is a great credit to our dedicated AI team and staff, but special thanks to Tim Faithful and our WA team of Bevan Ravenhill, Allison Watson and Henk and Nicolene Vallentgoed.

Global database and open trading of genetics keep Angus ahead.

Our policy is to make our own elite bulls and other bulls we own available to all breeders, as this is the best way the Angus breed can continue to make genetic progress. The global database, the performance-minded breeders and the accountability this creates to all sectors of the supply chain are what continue to set Angus apart from other breeds. The global demand for Angus genetics and quality Angus beef continues to grow. Angus are the dominant force in the production of high quality beef. While Wagyu will continue to play a valued role in the supply of quality beef, particularly to Asian markets, it's important Angus continues to make steps towards not only producing a more consistent, high quality product but also continue to find on-farm productivity gains through research and development. Our global database remains a key advantage over the 'secret squirrel' Wagyu system, where genetics are locked up behind closed doors in Japan or larger corporates with poor information on both production and carcase traits.

Premiums per head or profit per hectare?

Yes there are very good premiums for Wagyu calves but at what cost? How do the returns per hectare compare? Most beef farming systems in WA are capable of going up a few gears with a few tweaks on building systems that grow and use more grass and looking at key profit drivers like time of calving and kilograms of beef per hectare (not \$/hd). If you look at the combined opportunities of genetics, management systems and significant price rises in beef this year there is lots of good opportunities for WA beef producers. This is not the time to keep doing what you have been doing, but a great time for review and adoption of new technology like our cropping peers do so well.

WA Client Success.

The recent sale on 7th December held by Independent Rural Agents in Pemberton recorded some outstanding results for some very dedicated, passionate beef producers. Weaner steers that average 346kg averaged \$3.39/kg and grossed \$1,173 per head and interestingly the heifers eclipsed the steers making \$1,224 per head for 355kg weaner heifers at \$4.45/kg. Joined heifers mated to Lawsons Angus sires made \$2,015 per head. It was a credit to all the vendors and IRA for such professional presentation of cattle.

It was great to see Lawsons Angus genetics do so well in the WA Gate 2 Plate Challenge. The trial involved feeding both steers and heifers for 77 days and being assessed for ability to hit market specification, saleable meat yield and MSA grading. Lawsons Angus genetics performed extremely well, including Bevan Ravenhill winning the highest MSA grading steer by Ayrvale Bartel E7. The steer had an average MSA Index of 69.2 compared to competition average for all steers of 63.4, with a massive MSA Marbling Score of 620 (vs. average steers 320), ossification of 100, rib and rump fat of 6 mm.

More importantly from a genetic evaluation perspective, Ayrvale Bartel E7's 16 steer progeny were the highest MSA Marbling score and highest ranked MSA Index sire in Cohort #2 of the Angus Sire Benchmarking Program involving 47 nominated Angus sires. These E7 steers had an average MSA Index

of 67 and again a very high MSA Marbling score of 655. This carcase data has been entered into Breedplan along with E7's other ultrasound carcase scan data and he currently sits at +9.4 EMA and +3.7 IMF (top 1% of the breed) with >90% accuracy. These steers were fed at Rangers Valley on a 200+ day feeding program, it's interesting to note elite sires like E7 rise to the top in both the WA Domestic and Long Fed programs. Similarly, a Lawsons Angus sired Cape Grim grass-fed steer won a prestigious food award in Melbourne this year.

We have some exciting times ahead in the Beef Industry. Lawsons Angus remains committed to working with clients to improve on-farm productivity and to help find markets that recognize the value of superior genetics in feedlots and on the rail.

Many thanks for your on-going support and to all our staff and team in WA who do the hard yards throughout the year.

Regards,

Harry Lawson

LAWSONS ANGUS GENETICS IMPROVE PROFIT IN ALL PARTS OF THE SUPPLY CHAIN.

1. FERTILITY

Lawsons Angus are (and always have been) heavily focused on fertility; this year we calved 1,000 cows with a 45 day joining period in WA. Lawsons Angus cows are renowned to be the toughest, most fertile Angus due to their moderate mature size (around Breed average, so not small!) with high feed conversion and selection under high stocking rates for nearly 50 years. Basically, the high maintenance less fertile cows drop themselves out of the system. Most of our bulls are very moderate in maturity pattern and Mature Cow Weight (MCW) EBVs, but if you are concerned your cows are too large and need moderating then look harder at MCW on individual bulls and try and stay around breed average or below (say target < 90 MCW depending on other attributes of the bull).

Most seedstock herds in WA don't weigh cows or contribute data to Breedplan and use bulls with higher MCW; consequently when we look at other WA seedstock herds you can see the creep that has occurred in Mature Cow Weight over many years now. Other seedstock herds don't have the same focus on selection for fertility, cow efficiency

and calving ease. Under low stocking rates this doesn't cause too many issues, but with most WA commercial herds autumn calving the tough years cause major feed blow outs and major reproductive losses through lower pregnancy rates. Larger, leaner, high milk cows are the first cows to fall over in tough years or conceive late in the breeding season so often just looking at pregnancy rates doesn't give us the real underlying losses; these big cows eat a lot more feed than most breeders realise until they are forced into high supplementary feeding levels.

Lawsons Angus genetics are designed to better weather the tough years and be more fertile and productive in both good and bad years. We don't just talk about this, we have had more selection pressure on fertility than any herd we know in Australia. The information is there for all seedstock breeders to use, but unfortunately the focus seems to be more on trying to overcome fertility issues by breeding genetically fat animals; this is counter productive to energy efficiency as fat is expensive to put on and inefficient to mobilise. We need the emphasis on breeding feed efficient, moderate cows that rebreed quickly.

2. CALVING EASE

Lawsons Angus focus is to provide clients with predictable, reliable bulls that provide not only safe heifer mating options but also 'heifer' bulls that still have lots of performance and carcass.

We have earmarked what we regard as ideal, safe heifer bulls. The criteria used for our recommended calving ease for bulls is breed average or under for birth weight and better than -1.0 for Direct Calving Ease. We believe this is a safe, low risk threshold for most WA breeders mating heifers. In many cases with a good history of calving ease and management you will be able to consider bulls outside this criteria, but we are often asked "what bulls should we use on heifers?" so decided to

include a red tick in the EBV box to make it easier for breeders looking for bulls to mate yearling heifers.

3. GROWTH

We want the cattle that are born easily with moderate birth weight but then come out of the blocks fast and get to market weight quickly. This is easy to do, just focus on 400 Day or 600 Day EBVs. Most of our bulls have high growth. Growth is also correlated with feed efficiency although this is not a perfect relationship. We do believe there is room to further improve feed conversion and residual feed intake (select for animals that gain more or maintain body condition with less feed than predicted) through measurement and selection. High intake cattle make poor cows and lower margins for feedlots and cow-calf operators.

Lawsons Angus are highly regarded as highly efficient converters as testified by feedlot trials done at Borden where it was noted Lawsons Angus genetics were "25-20% higher feed conversion." This is also supported by trials at Gardiner Angus Ranch where they have documented feed conversion improvement on bulls from 9:1 to 3:1 over 30 years of selection.

So again, focus on growth in the right package by selecting bulls with high 400 Day or 600 Day EBVs in the right maturity pattern for your herd (focus on visual selection for frame and maturity relative to contemporaries and MCW EBV).

4. YIELD AND FAT

Much has been made and overplayed in the Angus breed of the good research that CRC did in the Maternal Productivity Research Project. Our selection for 20 years has been to increase the way animal's use feed to partition fat between what they deposit as intramuscular fat and subcutaneous fat. No other herd has had the same disciplined selection emphasis for meat yield and meat quality. Compare Lawsons Angus

Lawsons Paramount X486 has now had 11 AI calves in a row within a 23 day breeding season (9 first round) and survived some prolonged drought and floods in our Goondiwindi, Queensland program. Fertility and longevity remain an important part of our breeding program.

marbling (IMF) and eye muscle (EMA) to any other WA catalogue and you will get a surprise. We have demonstrated time and time again that you can have highly fertile animals that are negative fat and produce high yielding carcasses if they are feed efficient and moderate maturity pattern. Hence we have processors like Shark Lake Food group in WA who noted a 3% yield advantage on the rail with Lawsons Angus genetics.

5. MEAT QUALITY – MARBLING (INTRAMUSCULAR FAT) AND MSA GRADING

We spent over a year in the US researching meat quality, selection for marbling and carcass traits twenty years ago. We wanted to know; was marbling important for meat quality and could we select for it? The simple answer is yes on both fronts. We now have the MSA grading system and marbling is a key driver in achieving top boning room groups. Twenty years later we have a population of Angus cattle that rank at the very top for marbling that produce significantly higher marble scores at a younger age and/or with less days on feed. With feedlots getting tighter (and often negative) margins days on feed, MSA grades and feed efficiency are all key profit drivers.

Put another way why do all the markets that focus on quality target a high percentage of Angus? The answer is they produce the highest quality meat more predictably, more efficiently than any other breed. So yes, we do need to keep the selection pressure on producing high quality, high yielding carcasses for all sectors of the Beef industry to remain competitive in a Global Food Industry.

HOW DO WE DECIDE WHAT SHOULD WE PRIORITISE IN TERMS OF BREEDPLAN FIGURES?

Our advice is to establish some basic breeding objectives. If you need heifer bulls then you start by looking at the bulls with acceptable Calving Ease and Birth weight criteria and then decide how much growth and what maturity pattern (MCW) would suit you.

Be careful not to over analyse Breedplan data, keep it simple. Remember this is a highly selected group of bulls that sit at the top of the breed for most key economic traits so try and keep your options wide so you don't narrow selection down to a few bulls. In many cases these will be the same picks as other breeders and there will be many other bulls that will do a similar job.

We have still included Domestic (DOM) and Angus Breeding Index (ABI) and an explanation of these new indexes. They may be useful to some breeders but as per our discussion above we urge breeders to look more at the important individual EBVs for traits like Calving Ease Direct (CED), Birth Weight, 400 and 600 Day Growth, Mature Cow Weight, Eye Muscle Area and Marbling (IMF). Feel free to ask our advice if you need help to decide where you should focus.

The reality is most of these sale bulls are within acceptable maturity, growth, fat and scrotal EBV ranges for WA breeders. They are semen tested and guaranteed for 3 years for fertility and structure so again don't over analyse fertility data. We have included information on recessive traits and there are a number of carrier bulls catalogued, these will become less frequent over time as we dilute these recessive disorders and we don't believe they should be

a focus for commercial breeders but as with all the information we like to be transparent and give breeders lots of choice.

Included is information on Lawsons Angus Sire-Mate program, which is a simple, effective way for commercial herds to maximize genetic progress and avoid high levels of inbreeding through what we call generational 'skip' where breeders rotate different sire groups. This program has been developed by Lawsons Angus and provides a platform for WA breeders to make some significant steps forward in genetic gain.

We understand breeders have their own visual selection on what they like and don't like and we still encourage clients to take the time to see how bulls compare in their contemporaries and get their eye in on both the EBVs and the individual bulls phenotype and temperament.

Despite what some may perceive as negative comments about Breedplan, we still think it ranks animals accurately in most cases. It is the only way Angus breeders can make genetic progress where we are selecting for multi traits and selecting for traits that are often antagonistic due to genetic correlations (eg. calving ease and growth).

SALE CONDITIONS

DELIVERY OF SALE BULLS

Lawsons Angus will do our best to assist in the efficient and safe delivery of your bulls. Buyers, please ensure bulls are insured at the fall of the hammer as our insurance does not cover injury of bulls in transit. Lawsons Angus will provide free delivery to the Esperance region and Mt Barker saleyards. For interstate buyers please contact Lawsons Angus prior to the Sale regarding available freight rebates.

REGISTRATION STATUS AND TRANSFER OF BULLS

Most bulls on offer are Registered Herd Book animals with the Angus Society of Australia (ASA). Registration status of bulls is shown in the catalogue. 'H' indicates the animal is registered in the ASA Herd Book, 'A' indicates bulls are registered with ASA Performance Register (APR). All bulls will be transferred to purchaser at no cost on request.

3 YEAR BULL GUARANTEE

All bulls have undergone rigorous assessments for structural soundness and fertility, including a semen morphology test and physical evaluation of the bulls reproductive tract by Dr Enoch Bergman, Swans

Veterinary Services. On top of this we offer the strongest guarantee of any seedstock herd in Australia.

All breeding cattle sold by Lawsons Angus are fertile and structurally sound to the best of our knowledge.

If a bull becomes infertile or breaks down due to reasons other than injury or misadventure, at any time in the next 36 months, we will:

1. Provide you with a satisfactory replacement if available, or
2. Issue you with a credit equal to purchase price minus salvage value, that may be used to purchase any animal in future Lawsons Angus sales.

ANIMAL HEALTH STATUS OF SALE BULLS

Bulls exposed to reproductive diseases such as Leptospirosis and Vibriosis can have their reproductive performance impaired and spread disease between the females they are servicing. All bulls offered in this Sale have been vaccinated with Ultravac 7 in 1, Vibrovax, Rhinoguard (IBR) and Bovillus MH.

All bulls offered at this Sale have a Johnes status of MN3 and all cattle are free to travel to all States.

PESTIVIRUS, 7 IN 1 AND VIBRIO STATUS OF SALE BULLS

Lawsons Angus have been systematically working through a program with Enoch Bergman DVM, Swans Veterinary Services, Esperance, to eradicate Pestivirus from our herd in both WA and Victoria. This involved a combination of screening mobs for antibodies, ear notching testing and vaccinating the mobs that are shown to be negative that have had no previous exposure to a Persistently Infected (PI) animal with Bovine Viral Diarrhea (BVDV), also known as Bovine Pestivirus. BVDV is spread almost exclusively by PI animals and is a costly disease in the industry.

All WA males screened in 2015 were negative and therefore we have vaccinated all bulls and heifers.

Bulls exposed to reproductive diseases such as BVDV, Leptospirosis, and Vibriosis can have their reproductive performance impaired and spread disease between the females they are servicing. All bulls Lawsons Angus are offering in this Sale have been vaccinated with two doses of Pestigard, Ultravac 7in1, and Vibrovax.

RETENTION OF SEMEN AND CLONING INTERESTS

This year we have selected several bulls as being of particular interest and merit. These bulls are referred to herein as “nominated bulls” and are identified in the catalogue by a shaded box containing the words “Retaining Semen Marketing Rights and 50% Revenue Sharing Interest”.

Animals in this sale that are nominated to retain a semen interest in are sold with the following conditions;

- Each animal sold is the physical property of the purchaser. The purchaser is entitled to collect semen for use in their own herd only at any time. The purchaser is entitled to 100% of the salvage value of the bull.
- Lawsons Angus retains the right to access the nominated bulls at a future date for the purpose of semen production with the semen to be used within the Lawsons Angus program. Semen will be collected at the expense of Lawsons Angus and at a negotiated time and place convenient to the new owner and Lawsons Angus.
- Nominated bulls are sold with Lawsons Angus retaining exclusive semen marketing control, and a percentage of all semen royalties was nominated on the individual lot.
- Lawsons Angus may offer any purchaser, being a syndicate, semen company or other, the controlling interest in semen marketing of nominated bulls provided the prospective purchaser nominates their intentions to Lawsons Angus prior to sale, and at that time negotiate ongoing marketing/royalty terms acceptable to Lawsons Angus.
- If a bull is re-sold by a purchaser, Lawsons Angus retained interests persist with the new owner.
- Lawsons Angus retains exclusive cloning rights on all animals sold.
- No animal may be cloned without written consent from Lawsons Angus.

RETAINING SEMEN INTERESTS IN SALE BULLS ENABLES LAWSONS ANGUS TO OFFER ACCESS TO OUR BEST BULLS AND ENABLES THE BULL OWNER TO JOINTLY SHARE IN ANY FUTURE SUCCESS IN MARKETING SEMEN.

Retaining a semen interest provides Lawsons Angus with the option to collect semen for our own use, but also to control the potential marketing of semen to the best effect through our network of contacts. Very few bulls ever sell a lot of semen, and in most cases it is later in life after progeny have proven the merit of the bull.

As we put a great deal of resources and intellect into developing each bull, and in some cases into sampling young bulls through AAA and co-operator programs, it is reasonable to participate in their future success in the form of semen sales and use in our own program so we can ensure we continue our program’s genetic progress. With these points understood by our customers, we can offer for sale every bull we produce, and hold nothing back. It is important to note most seedstock herds retain their best bulls as stud sires, however the system we operate gives our clients direct access to our best bulls.

INSURANCE DISCLAIMER

Insurance risk of stud animals sold at auction transfers to the purchaser at the fall of the hammer, including animals remaining on the vendor’s property.

Purchasers therefore are advised to insure their animals at the completion of the sale. Stud Animals are not covered by commercial livestock insurance.

CALVING EASE

We have included a red tick for bulls that are recommended for use over yearling heifers next to the Calving Ease heading in EBV section. Calving ease bull EBV specifications are ≥ -1.0 for Direct Calving Ease and ≤ 4.5 Birth Weight. Individual herds may successfully use bulls outside of this recommended range depending on their herd and production system but these are our recommended “safe” heifer specifications. We also recommend you talk to us about helping develop a pre-calving heifer management plan that can be used in conjunction with these EBV specifications to achieve optimal calving and rebreeding for two year old heifers.

SIREMATE™ OPTIONS IN PRACTICE

LAWSONS ANGUS BREEDING PROGRAM IS BUILT ON MULTIPLYING THE BEST BULLS AVAILABLE IN THE WORLD. SIRE-MATE HELPS BREEDERS DEVELOP A SIMPLE, BUT STILL FLEXIBLE MATING PLAN THAT MINIMISES INBREEDING AND MAXIMISES GENETIC GAIN.

Ayrvale Bartel E7 - 50 sons sell!

Jimmy is from a different contemporary that sell later in the Sale, however, felt we had to sell K1754 as Lot 1 given his truly unique performance and rankings against all Angus calves born in 2014. Jimmy leads the pack of exciting new sire prospects coming through the Angus breed and is one of the most elite, multi-dimensional young bulls to sell in Australia all year! Jimmy is superbly balanced young bull across all traits and a beautiful, deep bodied bull.

Jimmy's legendary sire, Ayrvale Bartel E7, set new records in spring 2015 - this will be a great opportunity to access this elite sire with 50 sons selling in this Sale. E7 is unmatched in the Angus breed today for balanced performance and carcass quality. K1754 is the highest ranked E7 son from all calves born in 2014 and the 5th highest ranked son E7 son for Heavy Grain Index out of over 1,500 registered bulls! K1754 out performed his contemporaries by a long, long way and despite his younger age is still the heaviest bull in this year's Sale. K1754 is the highest ranked Sale bull for Heavy Grain Index and one of the highest Domestic Index and marbling (IMF) bulls.

Top 1% of the breed for Domestic and Grain Index, top 5% for 400 Day growth and marbling (IMF) and top 10% for EMA. Great pedigree that traces back to an imported Gardiner Angus Ranch Predestined daughter.

Wow, what a beautiful looking bull, slick coated, excellent docility and smooth muscle pattern, K781 does have it all! Great combination of sires here with E7 x Tank. Tank remains one of our all time favourite sires in terms of grass conversion, easy fleshing cattle with loads of muscle in a moderate maturity pattern. Tank daughters consistently turn off heavy calves year in year out. One of the highest Heavy Grain Index bulls in the Sale. Top 1% of the breed for Grain Index, top 5% for 400 Day growth and top 10% for EMA.

Novak is one of our truly great performers on grass, his calving ease is much greater than what his EBVs currently predict. We have calved hundreds of heifers to Novak with no trouble at all. Breedplan gets it right in most instances but is not perfect system and still relies on the accuracy of those breeders contributing data. In our herd the numbers line up extremely well with what we see in the paddock, our large contemporaries provides a great testing ground for any sire.

LAWSONS ANGUS REMAINS COMMITTED TO WORKING WITH CLIENTS TO IMPROVE ON-FARM PRODUCTIVITY AND TO HELP FIND MARKETS THAT RECOGNIZE THE VALUE OF SUPERIOR GENETICS IN FEEDLOTS AND ON THE RAIL.

**MANY THANKS FOR YOUR
ON-GOING SUPPORT AND TO
ALL OUR STAFF AND TEAM IN
WA WHO DO THE HARD YARDS
THROUGHOUT THE YEAR.**

PARTICULAR THANKS TO
ALLISON, BEVAN AND HENK
YOU ARE A POWERFUL TEAM
AND MAKE THIS ALL POSSIBLE

Allison Watson, Bevan Ravenhill and Henk Valentgoed.

A BRIEF DESCRIPTION OF EBVS AND \$INDEX VALUES

The following is a brief description of EBVs, \$Index values and Accuracies. For a more detailed explanation please refer to Angus Society of Australia web site (www.angusaustralia.com.au).

ACCURACY (%) ~ Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal (or it's progeny, or relatives) then the accuracy of it's EBVs for particular traits will increase.

CALVING EASE DIR (%)
Estimates of the genetic differences between animals in the ability of their calves, from 2 year old heifers, to be delivered without assistance.

CALVING EASE DTRS (%)
~ Estimates of the genetic differences between animals in the ability of their 2 year old daughters to calve without assistance.

GESTATION LENGTH (DAYS) ~ Estimates of the genetic differences between animals in the number of days from the date of conception to the calf birth date.

BIRTH WT (KG) ~ Estimates of the genetic differences between animals in calf birth weight.

200-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 200 days of age.

400-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 400 days of age.

600-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 600 days of age.

MATURE COW WEIGHT (KG) ~ Estimates of the genetic differences between animals in cow weight at 5 years of age.

MILK (KG) ~ Estimates of the genetic differences between animals in milk and animals in percentage retail beef yield, in a 300kg carcass.

INTRA-MUSCULAR FAT % (IMF%) ~ Estimates of the genetic differences between animals in percentage intra-muscular fat (marbling) at the 12/13th rib site, in a 300 kg carcass.

ANGUS BREEDING INDEX
~ estimates the genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals

that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. The index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.

DOMESTIC INDEX ~ estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade, with progeny finished using either grass, grass supplemented by grain or grain finishing systems.

HEAVY GRAIN INDEX ~ estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.

HEAVY GRASS INDEX ~ estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished heavy steers.

RECESSIVE GENETIC CONDITIONS

INFORMATION FOR BULL BUYERS

This is information for bull buyers about the recessive genetic conditions, **Arthrogryposis Multiplex (AM)**, **Hydrocephalus (NH)**, **Contractural Arachnodactyly (CA)** and **Developmental Duplications (DD)**.

PUTTING UNDESIRABLE GENETIC RECESSIVE CONDITIONS IN PERSPECTIVE

All animals, including humans, carry single copies (alleles) of undesirable or “broken” genes. In single copy form, these undesirable alleles usually cause no harm to the individual. But when animals carry 2 copies of certain undesirable or “broken” alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or “broken” genes. Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

KEY POINT: With today’s DNA tools undesirable genetic conditions can be managed!

WHAT ARE AM, NH, CA AND DD?

AM, NH, CA and DD are all recessive conditions caused by “broken” alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

KEY POINT: The number of reported observations of AM, NH, CA and DD calves is very low and there is certainly no need for panic.

HOW ARE THE CONDITIONS INHERITED?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition. For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as “carriers”.

WHAT HAPPENS WHEN CARRIERS ARE MATED TO OTHER ANIMALS?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow are mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele), and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

KEY POINT: For the condition to be expressed the undesirable gene needs to be present on both sides of the pedigree and both the sire and dam need to be a carrier.

HOW IS THE GENETIC STATUS OF ANIMALS REPORTED?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on pedigree AM free – Animal has not been tested
AM__%	__% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an “Animal Search” from the Angus Australia website or looking up individual animals listed in a sale catalogue.

KEY POINT: The genetic status of an animal is subject to change and will be re-analysed and adjusted each week as DNA test results of relatives are received.

IMPLICATIONS FOR COMMERCIAL PRODUCERS

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia’s Breed Development and Innovation Manager at (02) 6773 4602.

UPCOMING SALES AND EVENTS

– FRIDAY 8TH APRIL –

ALBANY SALE 2016
