# WELCOME TO OUR 2017 WA 6<sup>TH</sup> ANNUAL PRODUCTION SALE

Our 2017 WA Sale is once again a great way to kick off the Angus bull selling season nationally. This year our Sale will be held at 'Woolahra', 3159 Springdale Road, Jerdacuttup, close to Hopetoun in south east Western Australia on the Southern Ocean. The Sale will be the same format as last year, selling 100 bulls through the auction ring starting at 1pm on Tuesday the 24th of January 2017. The Sale will be linked to Auctions Plus, offering buyers an opportunity to bid on-line. We will have a more user-friendly format this year on Auctions Plus with more photos and a quick link to the pedigree and the latest ASA Breedplan data for each bull.

It is important to note the carcass and Index figures on Sure Fire will rise significantly next year, especially his marbling potential which is in the top 1% in the US (+1.35 marbling EPD vs. breed average +0.50) with high accuracy. Unfortunately Sure Fire is still only in the top 30% on Australian Breedplan. So in a nutshell, we are selling Sure Fire sons in this Sale with, in most cases heavily discounted marbling (IMF) and Indexes, particularly Heavy Grain Index, which is strongly influenced by marbling and also Domestic Index.

#### Calculation of EBVs for US Sires

Recently ASA have acknowledged there is a major issue in the conversion of US bulls into

Breedplan. The ASA report titled "Calculation of BREEDPLAN EBVs for North American Sires", published on 23 November 2016, brushes over the underlying damage and impacts by saying "This analysis would suggest the current strategies being utilised within Angus BREEDPLAN are an average, providing a reliable indication of the breeding values for these sires at the time of importation".

**However, Lawsons Angus don't work on averages, we work on accurate figures.** We have to select specific sires and multiply large numbers of progeny so we need the information to be accurate.

We do understand and appreciate Angus Australia are now working hard to try and get AGBU to rectify the situation and while we accept it is a complex technical job, we still maintain ASA should have taken more notice of breeders like us and our NZ colleagues at the coal face and action these progressive changes earlier.

*"It always seemed counter productive to be jumping to new technologies like 50k DNA markers without getting the basic import routine right for conversion of US sires EPDs to Breedplan EBVs right first."*

While it has suited Australian stud breeders to think they are out-pacing

#### We like statistics, so here are a few:

- 103 bulls sell by 7 AI sires (no back-up bulls used since 1994 in our nucleus herd)
- 90% of all Sale bulls are rock-solid calving ease bulls
- ALL bulls average in the top 5% for Domestic Index (81 bulls in top 10% or better for DOM)
- ALL bulls average in the top 6% for Heavy Grain fed Index (75 bulls in the top 10% or better for GRN)
- Large sire lines of GAR Sure Fire (33 sons), Paringa Judd (23 sons), Ayrvale Bartel E7 (23 sons) and Lawsons Incredible H803 (16 sons)

the top US breeders, given our core breeding goals are somewhat similar to the US top end breeders, it was never a position that we agreed with or found any evidence of in our program. We will always keep trialing the top end of Australian genetics and Australian bred bulls like Dinky-Di, Novak, Tank, Ayrvale Bartel E7, Incredible and Paringa Judd have proven themselves up against the top proven performance sires on a

Two year old K heifers at Woolahra.

GAR Sunrise calf at Woolahra.

global crisis. People forget nearly 80% of the gene pool in Australia is US derived (including most of the better end of the Australian-bred sires) and with over 300,000 registered calves in the US each year why would we ever want to ignore this resource? The global gene pool and the performance driven ethos of the Angus breeders is our competitive edge.

*"Despite this issue our core belief remains that Breedplan EBVs are still far more accurate than your eye and are the best methodology to rank animals for a large range of economic traits."*

As a general rule we don't like to quote actual weights, as it is relative performance that counts and how animals perform under pressure and high stocking rates so that they can compete in the real world that is important.

*"Most studs or seedstock herds of all breeds do not run cattle under high stocking rates, which is a problem as important traits like fertility and cow size do not come under scrutiny in these systems."*

We call it the "Fat Bull Club" and unfortunately this is still the norm in Angus seedstock production Australia-wide and has been gaining some ground in recent years. We like to stick to what we know makes our clients more money and not get caught up in fads. Like our bulls, we like the competition and we like to compete in the real world where animals run under large contemporary groups and have to earn a living the hard way.

We are seeing very real and tangible results from clients right across WA and last year we sold 1 in 4 (25%) of all Angus bulls

sold at auction in WA (source data Angus Australia web site).

*We appreciate the strong support we are getting in WA from commercial breeders who are seeing the results and all parts of the supply chain including feedlots, and who can see the improved feed conversion and MSA grading.*

Allison Watson did an interesting analysis comparing the 176 Lawsons Angus WA auction bulls versus the 579 bulls sold by 14 of the major WA studs that sold during the same bulls selling season in 2016. The genetic differences (refer page 7 in catalogue) were quite compelling. Lawsons Angus bulls were significantly higher (more +ve) for Calving Ease Direct, significantly less birth weight and higher for 200, 400 and 600 Day Growth with significantly lower Mature Cow Weight (MCW). All the key profit drivers that we keep emphasising that drive productivity in WA were significantly superior for Lawsons Angus bulls. Equally, with carcass traits the difference was also significant – Lawsons Angus were significantly ahead in Carcass Weight (CW), Eye Muscle Area (EMA), Rib Fat (higher yielding), marbling (IMF) and every \$ Index. We still see plenty of gears left even within our own program, but it is interesting when you actually sit down and look at the facts. I guess the only thing we lose out on is actual weight and this has a zero correlation with genetic progress and profitability!

We continue to push new ground in northern Australia with Angus genetics and crossbreeding programs and this year have sold a significant number of yearling bulls, many of which were bred in our WA herd, to a number of medium

and large pastoral companies in Queensland. These bulls are a similar age and weight to the yearling bulls we offer at our April Albany Sale and are already out mating large numbers of heifers in some very hot, tough environments. We appreciate the fact these companies have done their homework and understand the predictable calving ease, high growth and higher value progeny these Lawsons Angus bulls will produce compared with other Angus bulls. We see the same potential to use Angus bulls in northern WA over the next decade.

We would be remiss not to acknowledge what a great team of people we have in Western Australia with Bevan Ravenhill, Allison Watson, Henk and Nicolene Vallentgoed, Georgia Henderson. Our Victorian team of Michelle Muller, Jason Erasmus and Charles Pears have also played a big role in WA this year. Tim Faithfull has been our ever reliable AI technician who also continues to work with Allison and Henk on our large scale AI programs. It's tough and intensive at times, but we greatly appreciate the efforts of our team and the positive way they approach the challenge.

We really enjoyed catching up with many clients this year and hope to see you either at our Hopetoun Sale on the 24th January or Albany Yearling Bull Sale on 7th April 2017.

Regards,

**Harry Lawson**

# POWERFUL REASONS TO USE LAWSONS ANGUS TO IMPROVE YOUR PROFITABILITY

## 1. VALUE AND SERVICE

Lawsons Angus produce large numbers of progeny bred from the best balanced Angus sires sourced globally. All bulls are backed by a 3 Year Guarantee and are independently assessed for structure and fertility. Genetic progress is predictable and cost effective at Lawsons Angus.

## 2. CALVING EASE, HIGH GROWTH AND MODERATE FERTILE FEMALES

	CED	BW	600-DAY	MCW
LAWSONS ANGUS	2.1	3.2	106	87
ANGUS AVERAGE	-0.1	4.3	98	86

Lawsons Angus genetics give you calving ease, high growth, high feed conversion, high fertility and moderate cow size. Lawsons Angus manage their breeding herd in large contemporary groups under high stocking rates with a disciplined, practical breeding program based on sound science, not fiction.

## 3. VALUE IN THE FEEDLOT AND ON THE RAIL

	CW	EMA	RIB FAT	IMF	GRN
LAWSONS ANGUS	67	6.9	-0.4	2.7	146
ANGUS AVERAGE	54	4.4	0.1	1.6	104

Lawsons Angus have been focusing on meat quality for over 25 years. Lawsons Angus are bred to use energy (feed) more efficiently with more taste fat (marbling) and less waste fat (subcutaneous fat) resulting in a significantly higher yield and end value product that creates more value in every part of the supply chain.

### KEY:

CW = CARCASE WEIGHT

EMA = EYE MUSCLE AREA

RIB = RIB FAT

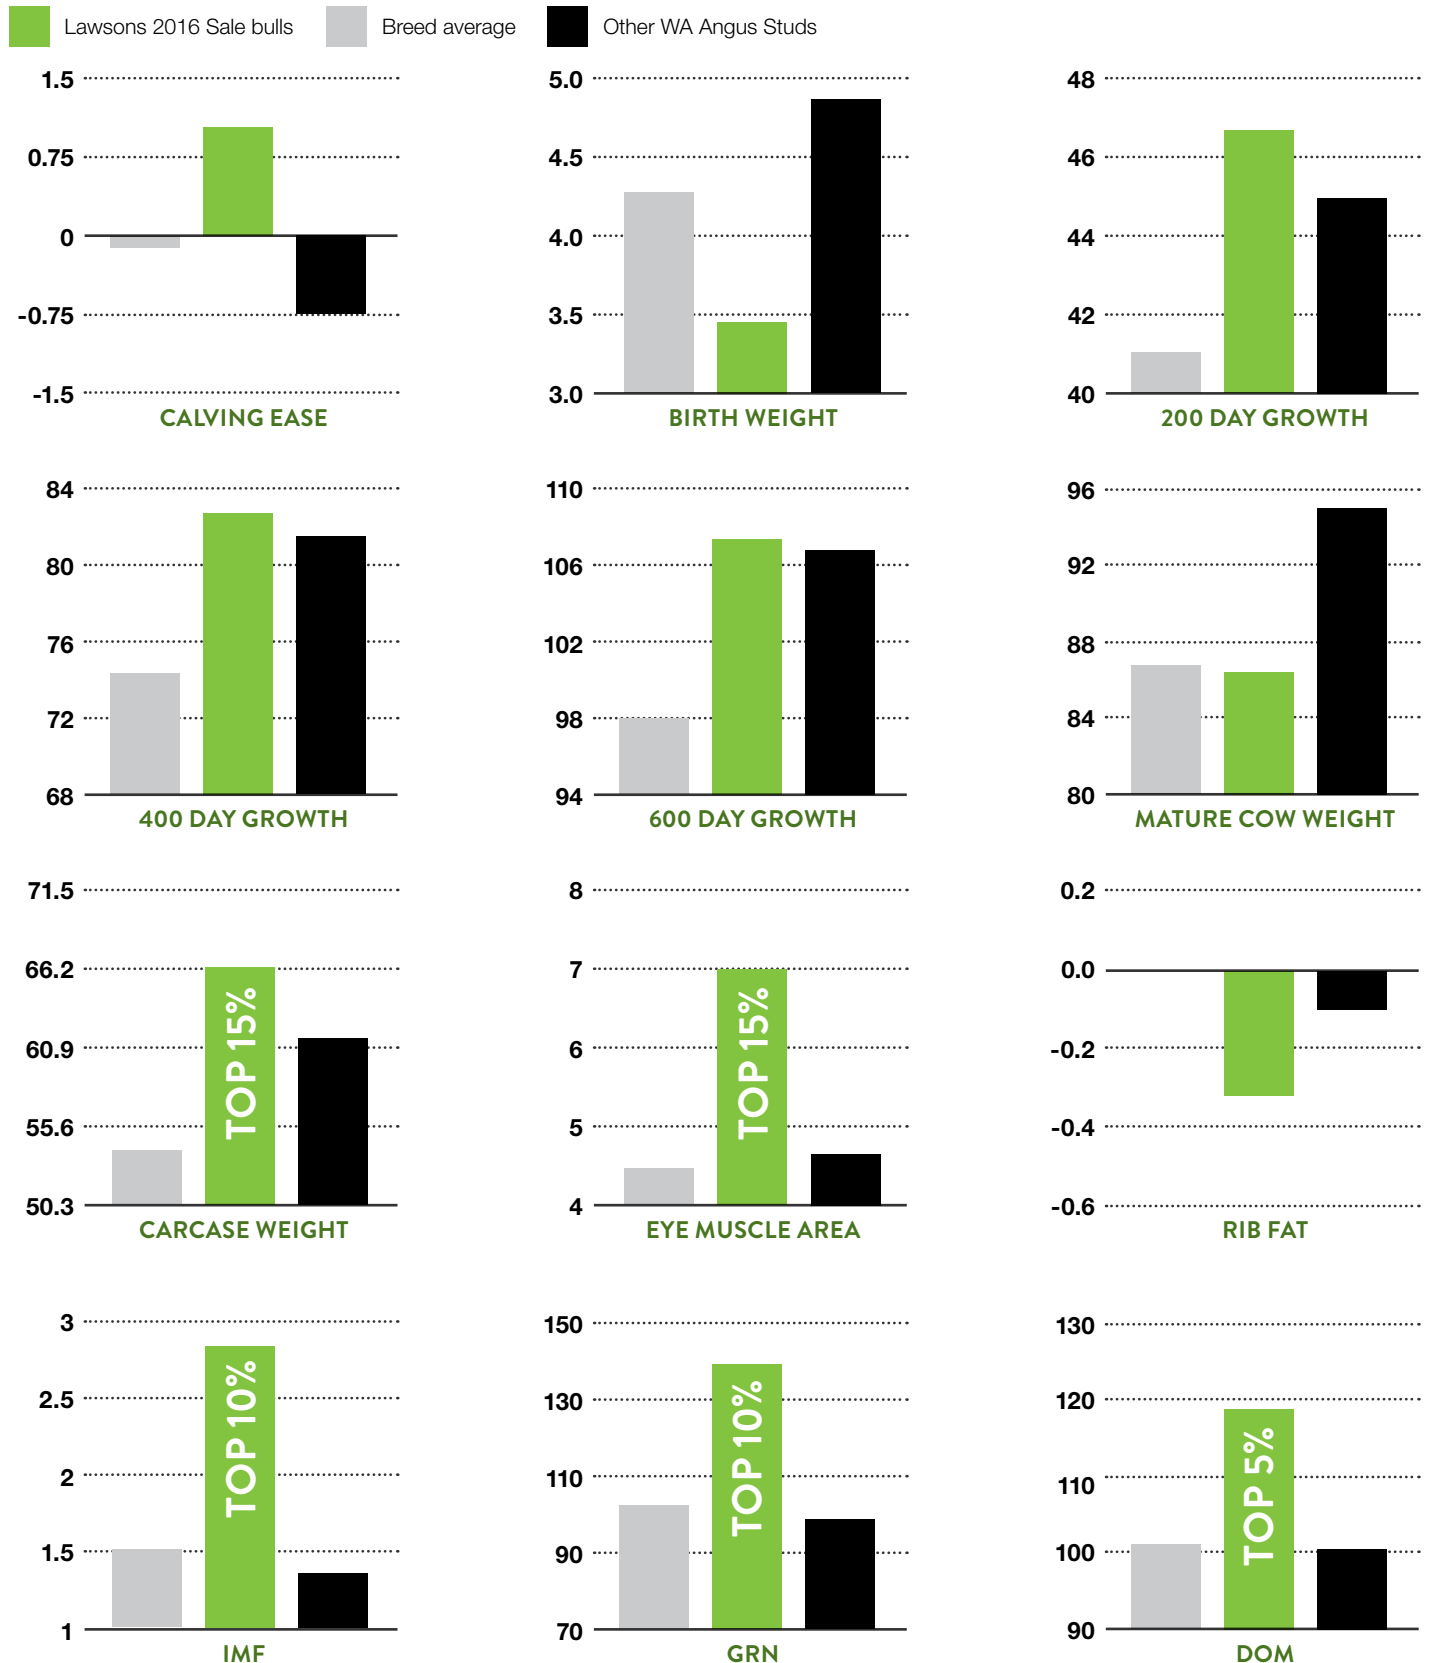

IMF = INTRAMUSCULAR FAT (MARBLING)

GRN = HEAVY GRAIN INDEX

*Data source: Angus Group Breedplan December 2017 for WA Lawsons Angus 2017 Sale bulls.*

# IT'S TRUE, LAWSONS ANGUS

BULLS HAVE MORE HORSEPOWER, ARE EASIER CALVING, HIGHER FERTILITY WITH SUPERIOR CARCASS TRAITS.

Comparison of Average EBVs Lawsons Angus WA (176 bulls) vs Other WA Angus Studs (579 bulls) March 2016

# SALE CONDITIONS

## **DELIVERY OF SALE BULLS**

Lawsons Angus will do our best to assist in the efficient and safe delivery of your bulls. Buyers, please ensure bulls are insured at the fall of the hammer as our insurance does not cover injury of bulls in transit. Lawsons Angus will provide free delivery to the Esperance region and Mt Barker saleyards. For interstate buyers please contact Lawsons Angus prior to the Sale regarding available freight rebates.

## **REGISTRATION STATUS AND TRANSFER OF BULLS**

Most bulls on offer are Registered Herd Book animals with the Angus Society of Australia (ASA). Registration status of bulls is shown in the catalogue. 'H' indicates the animal is registered in the ASA Herd Book, 'A' indicates bulls are registered with ASA Performance Register (APR). All bulls will be transferred to purchaser at no cost on request.

## **3 YEAR BULL GUARANTEE**

All bulls have undergone rigorous assessments for structural soundness and fertility, including a

semen morphology test and physical evaluation of the bulls reproductive tract by Dr Enoch Bergman, Swans Veterinary Services. On top of this we offer the strongest guarantee of any seedstock herd in Australia.

All breeding cattle sold by Lawsons Angus are fertile and structurally sound to the best of our knowledge.

If a bull becomes infertile or breaks down due to reasons other than injury or misadventure, at any time in the next 36 months, we will:

1. Provide you with a satisfactory replacement if available, or
2. Issue you with a credit equal to purchase price minus salvage value, that may be used to purchase any animal in future Lawsons Angus sales.

## **ANIMAL HEALTH STATUS OF SALE BULLS**

Bulls exposed to reproductive diseases such as Leptospirosis and Vibriosis can have their reproductive performance impaired and spread disease between the females they are servicing. All bulls offered in this Sale have been vaccinated with

Ultravac 7 in 1, Vibrovax and Rhinoguard (IBR).

All bulls offered at this Sale have a Johnes status of MN3 and all cattle are free to travel to all states.

## **PESTIVIRUS, 7 IN 1 AND VIBRIO STATUS OF SALE BULLS**

Lawsons Angus have been systematically working through a program with Enoch Bergman DVM, Swans Veterinary Services, Esperance, to eradicate Pestivirus from our herd in both WA and Victoria. This involved a combination of screening mobs for antibodies, ear notching testing and vaccinating the mobs that are shown to be negative that have had no previous exposure to a Persistently Infected (PI) animal with Bovine Viral Diarrhea (BVDV), also known as Bovine Pestivirus. BVDV is spread almost exclusively by PI animals and is a costly disease in the industry.

All WA males screened in 2016 were negative and therefore we have vaccinated all bulls and heifers.

## RETENTION OF SEMEN AND CLONING INTERESTS

This year we have selected several bulls as being of particular interest and merit. These bulls are referred to herein as “nominated bulls” and are identified in the catalogue by a shaded box containing the words “Retaining Semen Marketing Rights and 50% Revenue Sharing Interest”.

Animals in this sale that are nominated to retain a semen interest in are sold with the following conditions;

- Each animal sold is the physical property of the purchaser. The purchaser is entitled to collect semen for use in their own herd only at any time. The purchaser is entitled to 100% of the salvage value of the bull.
- Lawsons Angus retains the right to access the nominated bulls at a future date for the purpose of semen production with the semen to be used within the Lawsons Angus program. Semen will be collected at the expense of Lawsons Angus and at a negotiated time and place convenient to the new owner and Lawsons Angus.
- Nominated bulls are sold with Lawsons Angus retaining exclusive semen marketing control, and a percentage of all semen royalties was nominated on the individual lot.
- Lawsons Angus may offer any purchaser, being a syndicate, semen company or other, the controlling interest in semen marketing of nominated bulls provided the prospective purchaser nominates their intentions to Lawsons Angus prior to sale, and at that time negotiate ongoing marketing/royalty terms acceptable to Lawsons Angus.
- If a bull is re-sold by a purchaser, Lawsons Angus retained interests persist with the new owner.
- Lawsons Angus retains exclusive cloning rights on all animals sold.
- No animal may be cloned without written consent from Lawsons Angus.

Lot 27 Lawsons Sure Fire L441 as a yearling. These Sale bulls battled in the winter but came home strong with liveweight gains over 3kg/day off grass.

## RETAINING SEMEN INTERESTS IN SALE BULLS ENABLES LAWSONS ANGUS TO OFFER ACCESS TO OUR BEST BULLS AND ENABLES THE BULL OWNER TO JOINTLY SHARE IN ANY FUTURE SUCCESS IN MARKETING SEMEN.

Retaining a semen interest provides Lawsons Angus with the option to collect semen for our own use, but also to control the potential marketing of semen to the best effect through our network of contacts. Very few bulls ever sell a lot of semen, and in most cases it is later in life after progeny have proven the merit of the bull.

As we put a great deal of resources and intellect into developing each bull, and in some cases into sampling young bulls through AAA and co-operator programs, it is reasonable to participate in their future success in the form of semen sales and use in our own program so we can ensure we continue our program’s genetic progress. With these points understood by our customers, we can offer for sale every bull we produce, and hold nothing back. It is important to note most seedstock herds retain their best bulls as stud sires, however the system we operate gives our clients direct access to our best bulls.

## INSURANCE DISCLAIMER

Insurance risk of stud animals sold at auction transfers to the purchaser at the fall of the hammer, including animals remaining on the vendor’s property.

Purchasers therefore are advised to insure their animals at the completion of the sale. Stud Animals are not covered by commercial livestock insurance.

## CALVING EASE

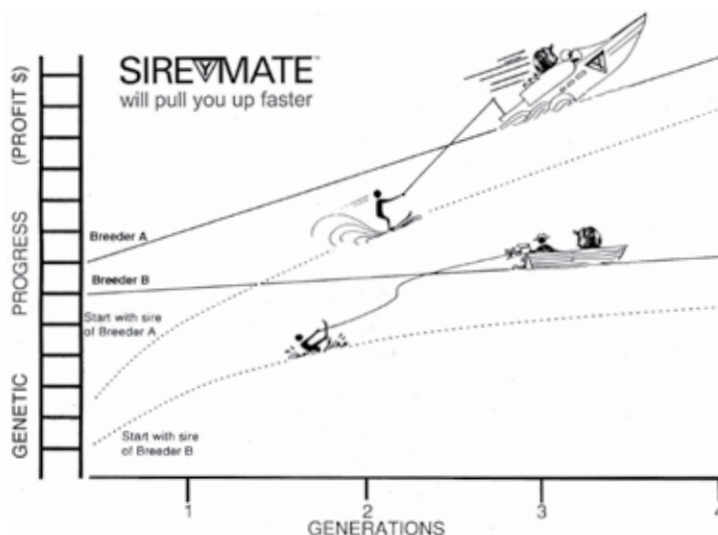

We have included a red tick for bulls that are recommended for use over yearling heifers next to the Calving Ease heading in EBV section. Calving ease bull EBV specifications are  $\geq 1.0$  for Direct Calving Ease and  $\leq 4.5$  Birth Weight. Individual herds may successfully use bulls outside of this recommended range depending on their herd and production system but these are our recommended “safe” heifer specifications. We also recommend you talk to us about helping develop a pre-calving heifer management plan that can be used in conjunction with these EBV specifications to achieve optimal calving and rebreeding for two year old heifers.

Lawsons Incredible H803.

Legend L112 is a full flush ET brother to Lawsons Incredible H803, one of Australia's leading AI sires leased by Genetics Australia, and the best balanced son of Ayrvale Bartel E7. Incredible's first big calf-crop are a feature sire-group in this year's Sale and has over 600 registered progeny and he semen exported to China. Flush brother, Legend L112 is an autumn 2015 ET calf bred at Lawsons Angus Albany co-operator herd, Severn Angus, owned by Bevan and Rebecca Ravenhill, and was used in their herd during autumn 2016 mating. Legend is the #3 ranked bull in the Sale for both Heavy Grain Index (GRN) and Domestic Index (DOM), and one of the elite 7 WA Sale bulls that achieved the Grand Slam - top 1% of the breed for ALL Four Angus Indexes. L112 is in the top 10% of the breed for 400 Day Growth and combined with his breed average Mature Cow Weight (MCW) and off the charts carcass traits (top 1% for CW, top 5% IMF and EMA). We think Legend is possibly the best balanced young sire that has ever been sold in Australia. A superb, all-round trait leader, super sound and quiet disposition with enormous potential as a stud sire.

Super attractive, big volumed bull with loads of power and muscle. L402 ranks in the top 5% of the breed for Heavy Grain Index, Domestic Index (DOM) and Carcase Weight (CW), 400 and 600 Day Growth. The #5 EMA bull in the Sale at +9.9, top 1% of the breed, these bulls really do have unmatched carcass potential in WA and it's the rule rather than the exception! L402 was the heaviest bull on actual weight at 732 kg off grass in early December in his contemporary group, compared to his contemporary average of 643 kg. Superb effort and a superior bull, one of our picks.

Fantastic pedigree and type in a unique all-round modern genetic package with Judd x Bartel E7. Lawsons Grand Slam L397 is the #2 ranked bull in the Sale for Heavy Grain Index (GRN) and #8 ranked for Domestic Index, top 1% of the breed for ALL four Angus Breed Indexes - one of only 7 bulls to achieve this Grand Slam. L397 is one of the highest growth bulls with 400D and 600D Breedplan EBVs of +94 and +123, both top 5% of the breed; he also boasts top 5% for EMA and top 10% for marbling (IMF).

Paringa Judd progeny are deep bodied, sound, quiet disposition with exceptionally well balanced Breedplan EBVs.

Lawsns Big Four Majors L431 is the #1 ranked bull in the Sale for both Heavy Grain Index (GRN) and Domestic Index (DOM) and top 1% of the Angus breed for ALL four Indexes, one of the elite group of 7 Grand Slam Sale bulls. Big Four Majors ranks in the top 1% for Carcass Weight (CW) and is one of the highest 400 Day Growth Sale bulls at +97, top 5% of the breed, plus top 10% for 600 Day Growth at +119. What is even more incredible is L431 is still below breed average Mature Cow Weight (MCW)! To cap his performance credentials off L431 ranks in the top 5% of the breed for marbling (IMF) as well - one of the biggest drivers for Meat Standards Australia (MSA) quality. These multi-trait elite bulls excel in every major economic trait and in all parts of the supply chain. This is by careful planning and disciplined selection over decades, not chance.

These Ayrvale Bartel E7 calves blow you away with their easy calving and explosive growth.

It's pretty incredible when you get bulls like L429, who have literally walked out of the paddock for their photo shoot after doing over 2.5kg/day average daily gain (group average) off grass this spring but also represent a uniquely balanced, powerful genetic package that simply leaves other Angus in their wake. L429 was the second heaviest in his contemporary group at 720 kg, compared to the group average of 643 kg. People talk about actual performance, but what counts to us is how these boys rank not only amongst their peers they compete with every day for grass, but we want to find out where do they fit against the best Angus bulls in the world. That's the fence we look over and is why our clients progeny compete with any commercial beef herd in the world. Big statement but backed up by facts, not feed! L429 is the equal #4 ranked bull in the Sale for Heavy Grain Index (GRN), top 1% of the breed for both GRN and DOM Indexes, top 10% for CW and EMA, top 5% for marbling (IMF).

L429 in December 2015 - this fella has gone from a 220kg weaner to a 720 kg bull - it's an incredible conversion in 12 months.

Start of a new contemporary group. L241 is a powerful, impressive bull in the flesh, super quiet disposition and extremely sound. Still moderate birth weight and positive calving ease, so could be used on heifers in herds with a good history of calving ease, but just outside the criteria for our Calving Ease tick. L241 is equal #4 ranked bull in the Sale for Heavy Grain Index (GRN), top 1% of the breed, plus top 5% DOM, CV, IMF, 400D and 600D Growth. L241 is one of the highest growth bulls in the Sale and was 724 kg (group av 636 kg) off grass in December.

*It's fantastic to see our clients having so much fun pushing their herds into new territory for performance and fertility and not having the stress and economic losses from pulling calves.*

Most impressive bull you will see this year! This big-butted, easy fleshing, moderate, powerhouse is a unique pedigree with the best of the US, Australia and New Zealand - Intensity x Pono is a great combination and one that provides a fantastic outcross for most studs Australia-wide. One of the leading stud sire prospects to be offered in this Sale and one we would like to progeny test. L294 is the #2 ranked Sale bull for 400 Day Growth and top 1% of the breed. Top 1% of the breed for Domestic Index (DOM), top 5% for Heavy Grain Index (GRN) and 600 Day Growth.

*Sale bulls reached their sale weight target of 650kg off grass in December despite a tough couple of months over winter.*

Big volumed, stout type of bull, typical of the Judd sons that have really surprised us just how good they are in all facets of key production traits and phenotype. Top 5% of the breed for Heavy Grain Index, Domestic Index (DOM) and EMA, top 10% of the breed for Carcase Weight (CW), 400 and 600 Day Growth. L222 was the equal third heaviest bull at 720 kg along with L275, behind L290 and L421, in his contemporary group off grass in early December, compared with the group average of 636kg.

	<b>GRN</b>	<b>138</b>	<b>DOM</b>	<b>117</b>	<b>ABI</b>	<b>130</b>	<b>GRS</b>	<b>124</b>	

L395 is in the top 10% of the breed for Domestic Index (DOM). We believe kilograms per hectare drives profitability and this boy did his fair share of grass conversion this year - ranking 4th heaviest off grass in December at 700kg compared to his group average of 643 kg. This is all "crunched" in Breedplan to provide you with a standard way of comparing bulls between bulls, years and across herds and countries.

*When we compared our 2016 sale bulls to 14 WA studs and 579 bulls we were pleasantly surprised to see our bulls have more growth potential (despite most WA bulls being much older and heavier actual weights). More importantly they did it with less birth weight and significantly lower Mature Cow Weight (MCW). The majority of Angus studs still do not even submit mature cow weights at weaning, which simply means they don't even measure the only Breedplan trait that involves input costs and is the most important driver of fertility.*

It doesn't get any better than this - Incredible x Tank X1235. You know whenever you see Tank in the maternal pedigree it will feature his distinctive heavy muscle set and early growth; bulls like Tank and Incredible that rose out of tough contemporaries and out performed 1,000 bulls in their drop have to have something special in their genetic DNA make-up. Our "pressure-cooker" system is still a more reliable way to identify superior performance animals than spending money on 50k DNA testing, but we keep an open mind on emerging technology.

Lawsns Bartel E7 J246, owned by Gerald Curkpatrick, Albany. It's good to see how our bulls grow out and monitor longevity.

Highest 400 and 600 Day Growth bull in the Sale, top 1% of the breed for these growth predictions plus Carcass Weight (CW). L319 is #2 ranked bull in the Sale for Carcass Weight plus top 10% of the breed for Domestic Index (DOM). More birth weight (BW) in L319, ideal for cows that need a big lift in growth.

The #2 EMA bull in the Sale at +10.3, top 1% of the breed. Top 10% of the breed for Domestic Index (DOM).

Col Thexton, Bevam Ravenhill and Jono Bendotti, Pemberton, WA.

Col Thexton, Independent Rural Agents, one of WA's most experienced and renowned Auctions Plus Assessors made the comment recently that he can see the additional muscle coming through in steer progeny from clients using Lawson's Angus bulls. They are only going to continue to improve Col! Fantastic to see the results of recent IRA Auctions Plus Sale on 5 December 2016 with over 1,500 head selling on one Sale, all objectively described and delivered from on-farm.

We like moderate, fertile cows that re-breed quickly in good and tough seasons.

Pedigree that oozes quality beef with Ayrvale Bartel x Tank X1235, two masters at converting grass to high marbling beef. While the rest of Australia woke up one day and decided E7 was a good bull and he has achieved some incredible Bull Sale results on the east coast during 2016, Lawsons Angus clients are already weaning calves by E7 daughters.

Sure Fire x Predestined combined two performance giants from Gardiner Angus Ranch, who continue to stay focused on making cumulative genetic gain that take their clients forward every year with predictable genetic merit and carcase traits that take clients way out of the commodity beef business and into true value-based marketing grids.

It's always good to catch up with Todd and Webby, at "Quintarra", Esperance. The Quinlivan family have been a big part of Lawsons Angus development in Western Australia.

Start of "WA3" contemporary group. L401 is the #10 ranked bull in the Sale for Heavy Grain Index (GRN), top 1% of the breed. One of an elite group of 7 Grand Slam bulls to hit top 1% percentile ranking for All four Angus breed Indexes, plus L401 is ranked #3 for IMF and top 5% of the breed for marbling (IMF) and top 10% Carcase Weight (CW). Marbling and meat quality go hand-in-hand and is a major driver of the new MSA Index. In general Angus cattle still lack muscle, so there is still lots of areas as a breed we need to improve.

One of our picks visually plus his fantastic numbers. Top 10% of the breed for Heavy Grain Index, top 5% for marbling (IMF). One of the highest marbling (IMF) bulls in the Sale, Angus should never get complacent about improving the eating experience and predictability of the final product. Building high marbling potential into commercial breeding herds has been a key focus of Lawsons Angus for over 25 years now, hence, we are nearly double breed average for marbling. It's one of the "free" traits our clients get when they use Lawsons Angus bulls.

I'll get the next gate lan.

L920 is in the top 10% of the breed for Heavy Grain Index (GRN) and Domestic Index (DOM), top 5% for marbling (IMF). One of the highest marbling bulls in the Sale, a key driver for beef quality under Meat Standards Australia (MSA) and one of the main reasons that consumers demand Angus beef - meat quality is important and Angus can still go a long way to improve consistency of eating quality. Please note 23 September 2015 born calf, much younger than most of the Sale bulls and will probably be the best value!

The next generation is on it's way – this contemporary group features GAR Prophet, GAR Sunrise and GAR Sure Fire calves (pictured).

# A BRIEF DESCRIPTION OF EBVS AND \$INDEX VALUES

**The following is a brief description of EBVs, \$Index values and Accuracies. For a more detailed explanation please refer to Angus Society of Australia web site ([www.angusaustralia.com.au](http://www.angusaustralia.com.au)).**

## ACCURACY (%)

~ Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal (or it's progeny, or relatives) then the accuracy of it's EBVs for particular traits will increase.

## CALVING EASE DIR (%)

~ Estimates of the genetic differences between animals in the ability of their calves, from 2 year old heifers, to be delivered without assistance.

## CALVING EASE DTRS (%)

~ Estimates of the genetic differences between animals in the ability of their 2 year old daughters to calve without assistance.

## GESTATION LENGTH (DAYS)

~ Estimates of the genetic differences between animals in the number of days from the date of conception to the calf birth date.

## BIRTH WT (KG)

~ Estimates of the genetic differences between animals in calf birth weight.

## 200-DAY WT (KG)

~ Estimates of the genetic differences between animals in liveweight at 200 days of age.

## 400-DAY WT (KG)

~ Estimates of the genetic differences between animals in liveweight at 400 days of age.

## 600-DAY WT (KG)

~ Estimates of the genetic differences between animals in liveweight at 600 days of age.

## MATURE COW WEIGHT (KG) DOMESTIC INDEX

~ Estimates of the genetic differences between animals in cow weight at 5 years of age.

## MILK (KG)

~ Estimates of the genetic differences between animals in milk and animals in percentage retail beef yield, in a 300kg carcasse.

## INTRA-MUSCULAR FAT % (IMF%)

~ Estimates of the genetic differences between animals in percentage intra-muscular fat (marbling) at the 12/13th rib site, in a 300 kg carcasse.

## ANGUS BREEDING INDEX

~ Estimates the genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. The index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.

~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade, with progeny finished using either grass, grass supplemented by grain or grain finishing systems.

## HEAVY GRAIN INDEX

~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.

## HEAVY GRASS INDEX

~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished heavy steers.

# RECESSIVE GENETIC CONDITIONS

## INFORMATION FOR BULL BUYERS

This is information for bull buyers about the recessive genetic conditions, **Arthrogryposis Multiplex (AM)**, **Hydrocephalus (NH)**, **Contractural Arachnodactyly (CA)** and **Developmental Duplications (DD)**.

### PUTTING UNDESIRABLE GENETIC RECESSIVE CONDITIONS IN PERSPECTIVE

All animals, including humans, carry single copies (alleles) of undesirable or “broken” genes. In single copy form, these undesirable alleles usually cause no harm to the individual. But when animals carry 2 copies of certain undesirable or “broken” alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or “broken” genes. Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

**KEY POINT: With today’s DNA tools undesirable genetic conditions can be managed!**

### WHAT ARE AM, NH, CA AND DD?

AM, NH, CA and DD are all recessive conditions caused by “broken” alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

**KEY POINT: The number of reported observations of AM, NH, CA and DD calves is very low and there is certainly no need for panic.**

### HOW ARE THE CONDITIONS INHERITED?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition. For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as “carriers”.

### WHAT HAPPENS WHEN CARRIERS ARE MATED TO OTHER ANIMALS?

Carriers, will on average, pass the undesirable allele to a random half (50%) of their progeny.

When a carrier bull and carrier cow are mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele), and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

**KEY POINT: For the condition to be expressed the undesirable gene needs to be present on both sides of the pedigree and both the sire and dam need to be a carrier.**

### HOW IS THE GENETIC STATUS OF ANIMALS REPORTED?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on pedigree AM free – Animal has not been tested
AM__%	__% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an “Animal Search” from the Angus Australia website or looking up individual animals listed in a sale catalogue.

**KEY POINT: The genetic status of an animal is subject to change and will be re-analysed and adjusted each week as DNA test results of relatives are received.**

### IMPLICATIONS FOR COMMERCIAL PRODUCERS

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

*For further information contact Angus Australia’s Breed Development and Innovation Manager at (02) 6773 4602.*
