SO MANY CHOICES...

WITH BETTER CALVING EASE, HIGHER GROWTH AND MODERATE MATURE SIZE, WITH MORE MUSCLE AND MARBLING THAN OTHER ANGUS.

This year we are selling over 200 Angus bulls and 100 elite registered PTIC Angus females from our nucleus herd. Our Open Day is on Thursday 17th March and the Sale will commence at 10am on Friday 18th March. We will be selling the females first followed by the bulls.

Please note this years' Sale will be interfaced with Auctions Plus.

This option provides people with the opportunity to bid remotely and clients are welcome to inspect the bulls and females at any time prior to the Sale and bid on-line. Bulls will be offered for sale from \$3,000 and females \$2,000, which we feel is exceptional value given the genetic merit of all sale animals.

As per our normal Sale terms we are offering free delivery on bulls to central points and all bulls are backed by Lawsons Angus Three Year Guarantee for fertility and structure.

This is by far the most elite group of Sale animals we have sold and the most powerful, predictable group of animals to sell at auction throughout Australia in 2016. **"So many choices"** with over 200 AI/ET bred bulls and over 100 elite PTIC registered cows; backed by 50 years of breeding and backed by the most disciplined breeding program in Australia.

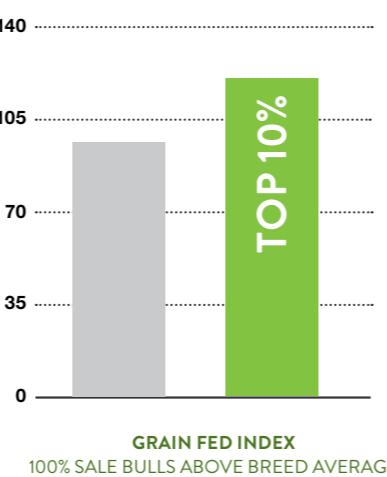

We have been 100% AI/ET now for 22 years, which gives Lawsons Angus clients the ability to make genetic progress at a faster rate than other Angus herds. It also gives us the ability to make individual animal breeding decisions for multi-trait selection with a much higher degree of precision and predictability. With over 2,500 registered females in our

group and over 1,000 bulls to select from it gives our clients have access to large numbers of sons of the best proven performance bulls in the breed at a lower cost. Genetic progress can be simple and cost effective. We have updated our Sire-Mate plan in the catalogue to make it easier for clients, both large and small herds to make simple breeding choices and minimize inbreeding.

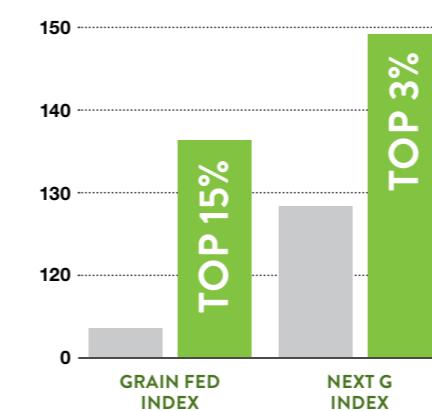

2016 Sale Bulls – unique calving ease and growth curve with elite carcass genetics

To make the 'cut' for this years' Sale, bulls have had to pass rigorous selection for both genetic merit (using EBVs) and independent structural soundness and fertility assessments. **Every one of the 200+ bulls is above breed average for Heavy Grain Fed Index and excel for all key economic traits – the average for Heavy Grain Index ranks in the top 10% of the breed and the top 15% for Heavy Grass Fed Index.**

SALE BULLS HEAVY GRAIN INDEX

SALE FEMALES COMPARE FOR GRAIN FED AND NEXT G INDEX

There are over 3,600 registered Angus calves sired by Ayrvale Bartel E7, with around 50% of these bred by Lawsons Angus!

A feature of our Victorian 2016 Sale is the 68 sons and 20 daughters of Ayrvale Bartel E7.

The first 70 Lots are all bred out of two-year old heifers! No other Sale offers the depth of breeding, the focus on multi-trait excellence and the value for money that this Sale represents. They are a powerful and unique group of bulls – exceptional calving ease, well below average birth weight, significantly faster growing at both 400 and 600 Days, yet still around breed average for Mature Cow Weight (MCW) plus loads more muscle and marbling. They are a good "showcase" for performance genetics and practical animal breeding. Sires of this year's Sale bulls include Ayrvale Bartel E7 (68 sons), Lawsons Incredible H803 (11 sons), Lawsons Novak E313 (42 sons), GAR Anticipation (34 sons), GAR Prophet (18 sons), Tuwharetoa Regent D145, (18 sons), Dunoon Goodthing (10 sons) and Lawsons NZ 09104 (7 sons).

A feature of our Victorian 2016 Sale is the 68 sons and 20 daughters of Ayrvale Bartel E7, who continues to create new milestones across Australia, including our recent WA Sale where we sold 46 E7 sons for an average of \$6,907. Lawsons Angus purchased Ayrvale Bartel E7 in a syndicate with Paringa Livestock and Chiltern Park when E7 was the same age as these Sale bulls and he has gone on to be one of the most popular sires in the country and is leased to Genetics Australia.

This is a great example of how our program identifies the top bulls in the world and multiplies these sires through our large scale AI/ET program. Genetic progress is simple, it relies on identifying elite proven sires, multiplying these out, applying tough selection parameters on both bulls and females and then turning generations over, as the younger animals will on average be a superior 'model'. It sounds simple and it can be if you stick to a plan.

We also truly believe Incredible has the potential to be even better than his great sire and his calves continue to impress across our large contemporary groups. Incredible is now a rock solid proven calving ease sire and his calves appear to be even higher growth than E7 with a similar muscle pattern. Both E7 and Incredible have almost identical Breedplan figures at this stage, so more progeny data and number crunching by Breedplan will eventually give us a more accurate description than my visual appraisal! This group of 11 yearling Incredible bulls are the first group of Incredible sons we have offered for sale. Incredible absolutely blew his contemporaries apart as a young bull and he is doing it again now with his own progeny up against the best proven performance bulls in the world. That's exciting to watch.

GAR Prophet has surprised everyone with his added growth and carcase but is still moderate framed and has elite carcase traits. **GAR Prophet has been the highest used sire at Gardiner**

2016 SALE FEMALES

100 ELITE REGISTERED SPRING PTIC FEMALES FROM OUR WA NUCLEUS HERD

50 K Heifers PTIC to calve late September 2016

Sired by Ayrvale Bartel E7, Lawsons Novak E313, GAR Anticipation, Dunoon Goodthing, Dunoon Evident, TC Total, Lawsons NZ 09104 and GAR Predestined all PTIC to leading AI sires, Lawsons Incredible H803, GAR Sure Fire, Paringa Judd J5 and Lawsons Hugo H653

21 J Cows PTIC to calve late September 2016

Sired by Ayrvale Bartel E7, Lawsons Novak E313, Tuwharetoa Regent D145, Topboss Ambassador F4, GAR Prophet, and Dunoon Evident, all PTIC to leading AI sires, Lawsons Incredible H803, GAR Sure Fire, GAR Sunrise, Paringa Judd J5 and HPCA Intensity 7102

19 H Cows PTIC to calve late September 2016

Sired by Ayrvale Bartel E7, Lawsons Novak E313, Te Mania Africa, Rennylea Edmund E11 and Dunoon Evident, all PTIC to leading AI sires, Lawsons Incredible H803, GAR Sure Fire, GAR Sunrise, Paringa Judd J5 and HPCA Intensity 7102

17 MA Cows (G-D Age groups) PTIC to calve late September 2016

Sired by top proven AI sires and all PTIC to leading AI sires, Lawsons Incredible H803, GAR Sure Fire, Paringa Judd J5 and HPCA Intensity 7102

The average predicted Grain fed Index (NextG \$ Index) of their progeny is \$149 (top 3% of the breed). All spring females sell PTIC and are due to calve late September with no follow-up natural sires used, so 100% of all Sale females sell PTIC to leading AI sires! This Female Sale represents a unique opportunity for any new or existing seedstock or commercial Angus herds to secure some of the best Angus females in the Angus breed.

Angus Ranch (GAR) for the past few years and you can see why.

Prophet is also a great outcross for many breeders and you will see many more of his progeny over the next few years. The four Prophet sons that sold at our recent WA Sale averaged over \$8,000.

Overall, we are extremely proud of this years Sale bulls, they are so consistent all the way through to Lot 216! The temperament of this year's bulls is outstanding, which is a trait that is moderately heritable but also a great tribute to our staff who have looked after these boys.

prior to the Sale. Please note Lawsons Angus do not offer free delivery on Sale Females, however we will assist purchasers if they would like to arrange for delivery on their behalf and manage this as cost effectively as we can.

Many thanks to our staff and in particular Michelle Muller who has the very tough task of managing our data, overseeing the management of our Victorian Bull Unit/breeding operation and cooperators and still manages to do a great job juggling work and bringing up a family. Thanks to Michelle Martin and our other hard working team as well.

The 2016 Sale Females are the most elite group of Angus females to ever sell in Australia. They include 20 daughters of Ayrvale Bartel E7. Sale Females average top 15% for GRN and NextG GRN Index is in the top 3% of the breed. Sale Females will sell from \$2,000.

This year's 100 PTIC Registered Sale Females are also a highlight for what can be achieved with disciplined breeding and stacking pedigrees with the top performance sires. These 100 registered Angus females are selected from our nucleus WA herd purely on joining date so they represent some of the most elite Angus heifers to ever sell in Australia, all sell PTIC to the next generation of super stars!

In order to maintain a 45 day calving period in WA nucleus herd and for ease of management we have offered for sale all December joined spring females. These females will go on to produce some of the top selling bulls in other seedstock herds as they have done so frequently over the years. There are also many potential elite donor cows that sell.

All females with >10% probability for carrying recessive genes (AM, CA, NH and DD) will be DNA tested prior to the Sale and results available prior to or on Sale Day. If the purchaser would like to DNA test animals with probabilities under 10% please discuss this with us

We have some exciting times ahead in the Beef Industry. Lawsons Angus remains committed to working with clients to improve on-farm productivity and to help find markets that recognize the value of superior genetics in feedlots and on the rail.

Sale Day is a great chance to catch up with lots of people from all over Australia. This year we will be serving slow-cooked Lawsons Angus grass-fed beef for lunch, which has been aged and is sired by none other than Ayrvale Bartel E7, one of the breeds best eating quality sires. We are hoping the chef can handle these genetics!

Look forward to seeing you on Sale Day or before the big day.

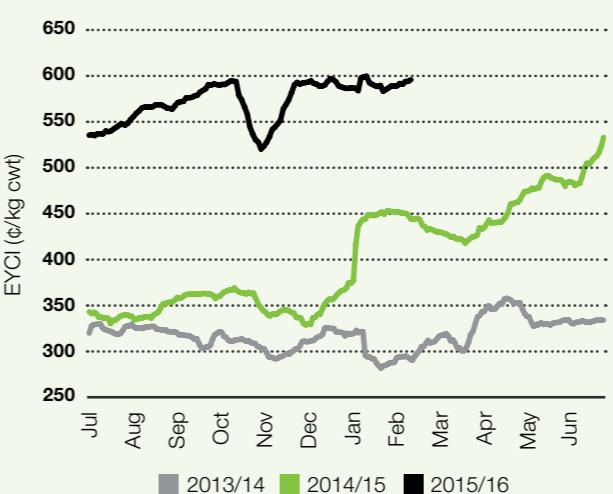

Harry Lawson

LAWSONS ANGUS GENETICS ARE AN IMPORTANT INGREDIENT IN A GLOBAL FOOD INDUSTRY

Australian Cattle Market hits an all-time high in 2015

It's been a great year for Australian breeding herds with cows and weaners making record prices. The Eastern Young Cattle Index (EYCI) jumped 64% in one year! It's a phenomenal turn around and it's been rewarding to see the successful sale results from clients in all parts of Australia.

EASTERN YOUNG CATTLE INDEX 2014-2016

John Berkefeld, Kazuhisa Kishimoto, Harry Lawson and Ryo Kitano at Tokyo Wagyu market, Japan, January 2016

Applying knowledge and research in a Global Food Industry – feedlot performance and value on-the-rail count

So why is the feedback from our Japanese customers relevant? Firstly, they are the end customer and consumer that choose to buy our beef. Secondly, a better understanding of our end markets helps us identify opportunities for our clients to step out of the commodity business. Thirdly, as an applied geneticist and breeder of Angus cattle we see lots of genetic variation (as well as financial variation), which allows us to continue to make genetic improvement that can lead to us building a more efficient, profitable supply chain.

Through measuring and applying multi-trait selection pressure on key economic traits, including carcass traits and MSA grading on grass and in the feedlot, we can produce a more consistent, predictable product with potentially less days on feed. Huge variation exists amongst cohorts of Angus steers we feed for Carpenter Beef export programs, and other programs like the Angus Sire Benchmark program, in average daily gain (ADG), but also in carcass weight, marbling and yield. Yield is a major component of the profit equation, but unfortunately has taken a backward step in many breeding programs selecting for positive fat.

The push by some Australian seedstock herds to use fat as a selection tool for fertility is misleading and will lead to loss of feed conversion and yield. Fat is four times more energy expensive to lay down than muscle, so the losses in producing 'genetically fat' animals will impact all parts of the supply chain. Moderate maturity patterns and milk are more important and better ways to maintain an efficient cow herd. Yield and weights gain on grass and in the feedlot are important economic traits and with careful sire-selection we can select for both high yield and fertility simultaneously, much like we do for outliers for birth weight and growth.

Whilst this good news provides a fundamental change to breeders' profitability, it's important to note that the EYCI provides an average price, the opportunity exists for breeders with quality cattle to achieve a significantly higher price than 'average'. At Lawsons Angus we never accept that average is acceptable and continue to work with our clients to help differentiate the value of their product so they don't have to play the 'commodity' game. We have always said we are a tiny player in a Global Food Industry, however we can still make a significant difference.

One of the exciting parts of being part of our newly formed Central Agri Group is Lawsons Angus clients have the opportunity to be part of a larger integrated beef company. This will provide opportunities for clients to participate in value-based marketing opportunities.

Part of my travels this year included a trip to Japan where we visited the end customers for Carpenter Beef's high quality grainfed Angus beef, which some of our key clients have been supplying cattle to for a number of years. We also visited the Tokyo Wagyu auction. If you ever doubt the value of selecting for meat quality then trips like these bring you to your senses! It also reminds me that there are markets around the world that are prepared to pay and recognise quality – Japan being a key one.

The Japanese emphasis on quality involves every part of the supply chain - from how the animals are fed and processed, to food safety, meat packaging through to beautifully presented value-adding/retail outlets in Japan. It's not just the marbling that is important for quality either, it's the taste, meat texture along with meat and fat colour that form part of the eating experience.

Lawsons Angus linkage to end markets through Central Agri Group will provide opportunities for clients to own their cattle further down the value-chain; understanding the profit drivers for clients involved in these programs will be even more important. Lawsons Angus cattle consistently show a 2-3% higher yield compared with other comparative Angus cattle. This is because we have been focused on breeding cattle with less waste fat (subcutaneous fat) and more taste fat (intramuscular fat or marbling) for over 25 years.

Our friend and US partner Mark Gardiner, Gardiner Angus Ranch, are shareholders in US Premium Beef that processed over 1,000,000 cattle last year on value-based grids last based on carcase weight, yield and marbling. The better end of the cattle achieved premiums of over \$150 per head. Consequently, Yield Grade discounts and grids increase the accountability of breeders and sharpen their focus on genetics and bull buying decisions.

GAR are the main contributor of carcase data to the American Angus Association with GAR submitting carcase on 11,847 head from a total data set of 28,770, which is 41% of the American Angus Association carcase data base. It's this powerful information and knowledge base that helps drive the breeding decisions at GAR. Equally GAR are a huge resource for Lawsons Angus and our clients and we attribute a large part of our success to our partnership and friendship with the Gardiner family. The new generation of sires coming through now from Gardiner Angus Ranch like Prophet, Anticipation, Sunrise, Sure Fire, Advance and Momentum are all leading edge bulls in the Angus breed.

Wearer Angus heifers at Marilyn and Michael Clift's "Isoroy", Tambo, Queensland. The resilience and determination of our northern clients to get through the tough times is great inspiration to many people including Lawsons Angus.

Lawsons Angus Sires top Industry Competitions – Science does work!

Ayrvale Bartel E7's 16 steer progeny were the highest MSA Marbling score and highest ranked MSA Index sire in Cohort #2 of the Angus Sire Benchmarking Program involving 47 nominated Angus sires. These E7 steers had an average MSA Index of 67 and again a very high MSA Marbling score of 655. This carcase data has been entered into Breedplan along with E7's other ultrasound carcase scan data and he currently sits at +9.6 EMA and +3.7 IMF (top 1% of the breed) with >90% accuracy. These steers were fed at Rangers Valley on a 200+ day feeding program, it's interesting to note elite sires like E7 rise to the top in both short and long fed grain programs as well as on grass.

It was rewarding to see Lawsons Angus genetics also perform well in the Gate 2 Plate Challenge in Western Australia. The trial involved feeding both steers and heifers for 77 days and being assessed for ability to hit market specification, saleable meat

yield and MSA grading. Lawsons Angus genetics performed extremely well, including **Bevan Ravenhill winning the highest MSA grading steer by Ayrvale Bartel E7**. The steer had an average MSA Index of 69.2 compared to competition average for all steers of 63.4, with a massive MSA Marbling Score of 620 (vs. average steers 320), ossification of 100, rib and rump fat of 6 mm.

Similarly, a Lawsons Angus sired Cape Grim grass-fed steer bred by Rodney Bishop, Smithton, Tasmania came runner-up to a Wagyu steak in a prestigious food award in Melbourne last year.

Global database and open trading of genetics keep Angus ahead

Lawsons Angus policy is to make our own elite bulls and other bulls or semen rights we own available to all breeders, as this is the best way the Angus breed can continue to make genetic progress. If we didn't take this approach some of the current world leading sires like Ayrvale Bartel E7, Lawsons Incredible H803, and Paringa Judd J5 would not be available to other breeders. When some breeders question us on why we keep semen marketing rights on many of our top bulls they forget we offer all our top bulls for sale and share equally 50/50 on semen sales revenue.

The global database, the performance-minded breeders and the accountability this creates to all sectors of the supply chain are what continue to set Angus apart from other breeds. **The global demand for Angus genetics and quality Angus beef continues to grow. Angus remain the dominant force in the production of high quality beef.** While Wagyu will continue to play a valued role in the supply of quality beef, particularly to Asian markets, it's important Angus continue to make steps towards not only producing a more consistent, high quality product but also continue to find on-farm productivity gains through research and development. Our global database remains a key advantage over the 'secret squirrel' Wagyu system, where genetics are locked up behind closed doors in Japan or larger corporates with poor information on both production and carcase traits.

Premiums per head or profit per hectare?

Yes there are very good premiums for Wagyu calves but at what cost? How do the returns per hectare compare? **The key advantage Angus have over Wagyu is the maternal power of the Angus cow and the superior growth and feedlot performance of Angus cattle.** No doubt Wagyu beef is in high demand but the high cost of production and the length of time from birth to slaughter needs careful analysis before anyone should embark on this pathway. In my opinion the increased use of Wagyu bulls in northern Australia will reduce the price of Wagyu beef in coming years. These inefficiencies are why Wagyu remains only a niche market in the US and Angus is the preferred breed for both ranchers and consumers. Most beef farming systems in Australia are capable of going up a few gears with a few tweaks on building systems that grow and use more grass and looking at key profit drivers like time of calving and kilograms of beef per hectare (not \$/hd). If you look at the combined opportunities of genetics, management systems and significant price rises in beef this year there are lots of good opportunities for beef producers. This is not the time to keep doing what you have been doing, but a great time for review and adoption of new technology like our cropping peers do so well. Most cropping enterprises consistently find 2-3% increases in productivity year on year, unfortunately us beef producers lag behind.

This F1 Angus x Brahman is sired by a Lawsons Angus Predestined son at Bill and Margaret Allison's "Broadlands" property at McKinlay, Queensland. It's been a long road for most of our northern clients but recent rains are buoying their spirits.

IN GOOD TIMES IT'S EASY TO BECOME A LITTLE COMPLACENT ABOUT BREEDING DECISIONS, WHEN REALLY THIS IS THE TIME TO TURN UP THE HEAT ON UPGRADING THE GENETIC POTENTIAL OF YOUR HERD...

Keeping the focus on genetic gain during the good times is important

In good times it's easy to become a little complacent in breeding decisions, when really this is the time to turn up the heat on upgrading the genetic potential of your herd by retaining more heifers and selling off more of your older cows.

It's important for breeders to continue to make cumulative genetic gain in production efficiencies and we would like to highlight the fact that not all Angus are the same. Lawsons Angus Sale bulls and females are uniquely balanced for calving ease, high growth, moderate mature cow size and very high end product value. The superior feed conversion on grass and in feedlots of Lawsons Angus cattle is a major difference with Lawsons Angus genetics that often gets lost in the 'muddle' of trying to translate what these EBVs mean in the commercial industry. The economic difference between an average Angus and the superior performance Angus is much greater than most people realise, in all parts of the supply chain.

In cow-calf operations, no matter how good you think your current cow herd is, there are great opportunities to still take some large steps forward. It's a common theme amongst many breeders to sell off a big percentage of their heifers, which means they are passing on the benefits of their genetic investment to other parts of the supply chain. The easier way to make genetic progress is to join the majority of your heifers and sell older cows. The current market conditions provides a great opportunity to do this either through selling surplus cows for slaughter or for breeding.

Dave and Rebecca Sargood, Augathella, Queensland are achieving pregnancy rates of 90% in cows using Lawsons Angus bulls.

Using Angus bulls in Northern Australia opens more doors

It's been a long road for most of our northern clients but recent rains are buoying their spirits. One of the most rewarding parts of the year for me was visiting our northern clients in Queensland and seeing first hand how these people have coped through the tough times and the resilience to survive. It was pleasing to see how our bulls have endured these tough seasons in the north and not only the calf-getting ability of these bulls but the outstanding performance of their progeny in terms of weaning and performance on grass in a wide range of production systems. The higher fertility and 'bounce-back' of females sired by our bulls was also noted by all of the people I visited.

The potential to utilize Angus in the north for crossbreeding is an easy, cost effective way to lift fertility and provide access to higher value markets.

Many thanks to all our northern clients for their support and we hope you continue to get good rainfall over the coming months.

LAWSONS ANGUS GENETICS IMPROVE PROFIT IN ALL PARTS OF THE SUPPLY CHAIN.

1. FERTILITY AND MATURE COW WEIGHT

Lawsons Angus are (and always have been) heavily focused on fertility; this year we calved over 1,000 cows with a 45 day joining period in WA and Victoria. Lawsons Angus cows are renowned to be the toughest, most fertile Angus due to their moderate mature size (around Breed average, so not small) with high feed conversion and selection under high stocking rates for nearly 50 years. Basically, the high maintenance less fertile cows drop themselves out of the system. Most of our bulls are very moderate in maturity pattern and Mature Cow Weight (MCW) EBVs, but if you are concerned your cows are too large and need moderating then look harder at MCW on individual bulls and try to stay around breed average or below (say target < 90 MCW depending on other attributes of the bull).

Most seedstock herds don't weigh cows or contribute data to Breedplan and use bulls with higher MCW; consequently when we look at other seedstock herds you can see the creep that has occurred in Mature Cow Weight over many years. Other seedstock herds don't have the same focus on selection for fertility, cow efficiency and calving ease. Under low stocking rates this doesn't cause too many issues, but with most commercial herds autumn calving the tough years cause major feed blow outs and major reproductive losses through lower

pregnancy rates. Larger, leaner, high milk cows are the first cows to fall over in tough years or conceive late in the breeding season so often just looking at pregnancy rates doesn't give us the real underlying losses; these big cows eat a lot more feed than most breeders realise until they are forced into high supplementary feeding levels.

Lawsons Angus genetics are designed to better weather the tough years and be more fertile and productive in both good and bad years. We don't just talk about this, we have had more selection pressure on fertility than any herd we know in Australia. The information is there for all seedstock breeders to use, but unfortunately the focus seems to be more on trying to overcome fertility issues by breeding genetically fat animals; this is counter productive to energy efficiency as fat is expensive to put on and inefficient to mobilise. We need the emphasis on breeding feed efficient, moderate cows that rebreed quickly.

2. CALVING EASE

Lawsons Angus focus is to provide clients with predictable, reliable bulls that provide not only safe heifer mating options but also 'heifer' bulls that still have lots of performance and carcass. Lawsons Angus bend the curve at top ends - easy calving, high growth and moderate mature cow size - only a long term disciplined approach to breeding and 100% AI/ET can achieve this unique

balance. Predictable calving ease with high growth and end product value is the 'norm' with Lawsons Angus.

3. GROWTH

We want the cattle that are born easily with moderate birth weight but then come out of the blocks fast and get to market weight quickly. This is easy to do, just focus on 400 Day or 600 Day EBVs. Most of our bulls have high growth. Growth is also correlated with feed efficiency although this is not a perfect relationship. We do believe there is room to further improve feed conversion and residual feed intake (select for animals that gain more or maintain body condition with less feed than predicted) through measurement and selection. High intake cattle make poor cows and lower margins for feedlots and cow-calf operators.

Lawsons Angus are highly regarded as highly efficient converters as testified by feedlot trials done at Borden where it was noted Lawsons Angus genetics were "25-20% higher feed conversion." This is also supported by trials at Gardiner Angus Ranch where they have documented feed conversion improvement on bulls from 9:1 to 3:1 over 30 years of selection. So again, focus on growth in the right package by selecting bulls with high 400 Day or 600 Day EBVs in the right maturity pattern for your herd (focus on visual selection for frame and maturity relative to contemporaries and MCW EBV).

4. YIELD AND FAT

Much has been made and over-played in the Angus breed of the good research that CRC did in the Maternal Productivity Research Project. Our selection for 20 years has been to increase the way animal's use feed to partition fat between what they deposit as intramuscular fat and subcutaneous fat. No other herd has had the same disciplined selection emphasis for meat yield and meat quality. Compare Lawsons Angus marbling (IMF) and eye muscle (EMA) to any other catalogue and you will get a surprise. We have demonstrated time and time again that you can have highly fertile animals that are negative fat and produce high yielding carcasses if they are feed efficient and moderate maturity pattern. Hence we have processors like Shark Lake Food group in WA who noted a 3% yield advantage on the rail with Lawsons Angus genetics.

5. MEAT QUALITY – MARBLING (INTRAMUSCULAR FAT) AND MSA GRADING

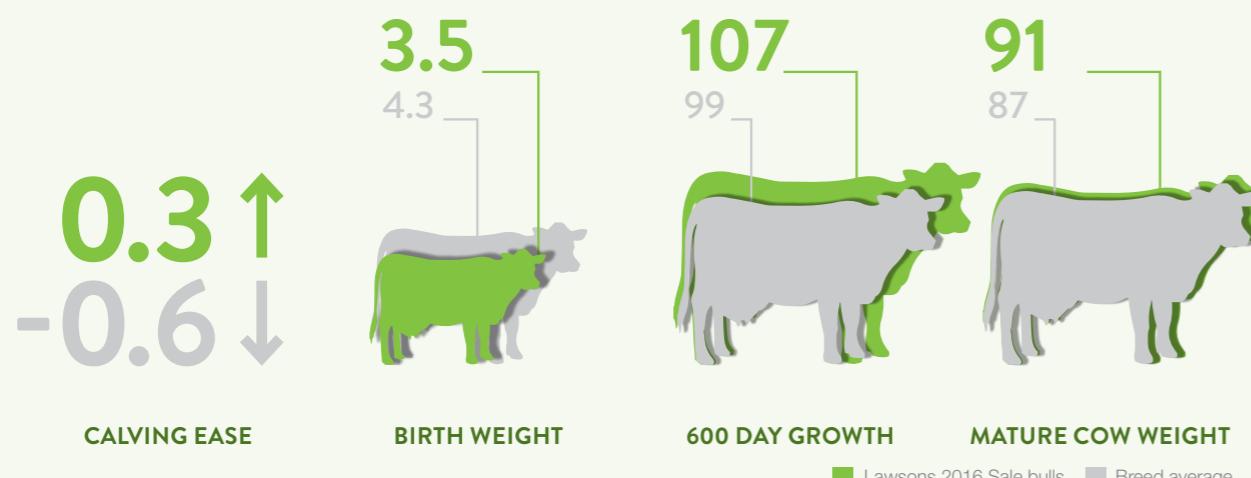

We spent over a year in the US researching meat quality, selection for marbling and carcass traits twenty years ago. We wanted to know; was marbling important for meat quality and could we select for it? The simple answer is yes on both fronts. We now have the MSA grading system and marbling is a key driver in achieving top boning room groups. Twenty years later we have a population of Angus cattle that rank at the very top for marbling that produce significantly higher marble scores at a younger age and/or with less days on feed. With feedlots getting tighter (and often negative) margins days on feed, MSA grades and feed efficiency are all key profit drivers.

The reality is most of these Sale bulls are within acceptable maturity, growth, fat and scrotal EBV ranges for breeders. They are semen tested and guaranteed for 3 years for fertility and structure so again don't over analyse fertility data. We have included information on recessive traits and there are a number of carrier bulls catalogued. These will become less frequent over time as we dilute these recessive disorders and we don't believe they should be a focus for commercial breeders, but as with all the information we like to be transparent and give breeders lots of choice.

Included is information on Lawsons Angus Sire-Mate program, which is a simple, effective way for commercial herds to maximize genetic progress and avoid high levels of inbreeding through what we call generational 'skip' where breeders rotate different sire groups. This program has been developed by Lawsons Angus and provides a platform for breeders to make some significant steps forward in genetic gain.

We understand breeders have their own visual selection on what they like and don't like and we still encourage clients to take the time to see how bulls compare with their contemporaries and get their eye in on both the EBVs and the individual bulls phenotype and temperament.

Despite what some may perceive as negative comments about Breedplan, we still think it ranks animals accurately in most cases. It is the only way Angus breeders can make genetic progress where we are selecting for multi traits and selecting for traits that are often antagonistic due to genetic correlations (eg. calving ease and growth).

SALE CONDITIONS

NOTICE TO BUYERS

All lots will be sold subject to the usual conditions governing auction sales.

Rebate of 3% is available to outside agents who attend the sale or introduce their client prior to Sale day, and settle on behalf of clients within 7 days.

Please email introductions to lawsons@lawsonsgenus.com.au.

If agents are nominated to settle on behalf of clients on Sale day and do not attend 1% rebate will be applied.

Most Sale cattle are MN3 status under the National Johne's program and are free to travel to all states. There are some Beef Only status animals catalogued.

DELIVERY OF SALE BULLS

Bulls purchased at the Lawsons Angus 2016 Sale are entitled to 'Lawsons Angus Delivery' Australia-wide. Bulls will be delivered free to central points as near to your property as is available. Delivery of cattle will depend on how many bulls will be travelling to your area and what their final destination will be. In Queensland delivery will be free to Goondiwindi. For WA buyers please contact us directly to discuss subsidized transport to WA. We will do our best to assist in the efficient and safe delivery of your bulls. Buyers please ensure bulls are insured at the fall of the hammer as our insurance and guarantee does not cover injury of bulls in transit. Buyers may choose to organize their own cartage of bulls at their own expense.

DELIVERY OF SALE FEMALES 2016

Delivery of Females purchased at the Lawsons Angus 2016 Sale may be arranged by Lawsons Angus on behalf of the purchaser. This will be done as efficiently as possible, but at the purchaser's cost. In some cases loads will be worked in with other deliveries to reduce the cost for purchasers. The exact charge for deliveries will not be known until after deliveries are completed. Female transport charges will be charged to the purchaser's account along with the purchase price and transfer cost to the ASA, or billed by the carrier direct to the purchaser. Buyers requiring express delivery of their purchases may liaise with Lawsons Angus to use their carriers at their own cost.

All due care is taken during the transit period. However buyers are responsible for the insurance of animals against injury or death from the fall of the hammer.

Insurance is available on Sale day or buyers may make prior arrangements with their own insurer.

Buyers must also fill in the 'Lawsons Angus Delivery' form with delivery and transfer instructions when registering at the Sale.

Please ensure that you provide specific delivery information including:

- map to your property
- GPS reference mobile
- mobile contacts
- email contacts
- any other information which is helpful to ensure efficient delivery.

REGISTRATION STATUS AND TRANSFER OF BULLS

Most bulls on offer are Registered Herd Book animals with the Angus Society of Australia (ASA). Registration status of bulls is shown in the catalogue. 'H' indicates the animal is registered in the ASA Herd Book, 'A' indicates bulls are registered with ASA Performance Register (APR). Non transfer commercial bulls are denoted 'NT' or 'COM' status. Registration Transfer of bulls and females should be notified in writing on the Buyer Delivery Instruction form. Bulls will be transferred at no cost. Females will be transferred upon request at the cost of the purchaser. The ASA transfer charges for females is \$22 per head plus GST. These costs will be charged to buyers on top of the purchase price for animals they wish to transfer, unless otherwise specified by buyers on the delivery form.

There is no obligation for commercial buyers to transfer animals.

3 YEAR BULL GUARANTEE

All bulls have undergone rigorous and independent assessments for structural soundness and fertility, including a semen test and physical evaluation of the bulls reproductive tract. On top of this we offer the strongest guarantee of any seedstock herd in Australia.

All breeding cattle sold by Lawsons Angus are fertile and structurally sound to the best of our knowledge.

If a bull becomes infertile or breaks down due to reasons other than injury or misadventure, at any time in the next 36 months, we will:

1. provide you with a satisfactory replacement if available, or
2. issue you with a credit equal to purchase price minus salvage value, that may be used to purchase any animal in future Lawsons Angus sales.

FEMALE GUARANTEE

All cows have been tested PTIC by an independent veterinary service. Lawsons Angus guarantee is that all females sold will be fertile and sound at point of sale. If there are any issues pertaining to the pregnancy status of these animals please contact us.

The Lawsons Angus 3 year bull guarantee and female guarantee are not life insurance policies. Normal care needs to be taken as we cannot replace an animal that is injured or dies for any reason. We recommend you insure animals against injury. An insurance service will be available on Sale day. This guarantee is in addition to normal terms and conditions governing auction sales, and as such the vendor's decision will be final. In some cases buyers may be requested to supply a veterinary report.

PESTIVIRUS, 7 IN 1 AND VIBRIO STATUS OF SALE BULLS

Lawsons Angus have worked through a systematic program with Enoch Bergman DVM, Swans Veterinary Services, Esperance, to eradicate Pestivirus from our herd in both WA and Victoria. This involves a combination of screening mobs for antibodies, ear notching testing and vaccinating the mobs that are shown to be negative that have had no previous exposure to a Persistently Infected (PI) animal with Bovine Viral Diarrhea (BVDV), also known as Bovine Pestivirus. BVDV is spread almost exclusively by PI animals and is a costly disease in the industry.

Bulls exposed to reproductive diseases such as BVDV, Leptospirosis, and Vibriosis can have their reproductive performance impaired and spread disease between the females they are servicing. All bulls Lawsons Angus are offering in this Sale have been vaccinated with two doses of Pestigard, Ultravac 7in1, and Vibrovac.

RETENTION OF SEMEN AND CLONING INTERESTS

This year we have selected several bulls as being of particular interest and merit. These bulls are referred to herein as "nominated bulls" and are identified in the catalogue by a shaded box containing the words "Retaining Semen Marketing Rights and 50% Revenue Sharing Interest".

Animals in this sale that are nominated to retain a semen interest in are sold with the following conditions:

Each animal sold is the physical property of the purchaser. The purchaser is entitled to collect semen for use in their own herd only at any time. The purchaser is entitled to 100% of the salvage value of the bull.

Lawsons Angus retains the right to access the nominated bulls at a future date for the purpose of semen production with the semen to be used within the Lawsons Angus program. Semen will be collected at the expense of Lawsons Angus and at a negotiated time and place convenient to the new owner and Lawsons Angus.

Nominated bulls are sold with Lawsons Angus retaining exclusive semen marketing control, and a percentage of all semen royalties as nominated on the individual lot.

Lawsons Angus may offer any purchaser, being a syndicate, semen company or other, the controlling interest in semen marketing of nominated bulls provided the prospective purchaser nominates their intentions to Lawsons Angus prior to sale, and at that time negotiate ongoing marketing/royalty terms acceptable to Lawsons Angus.

If a bull is re-sold by a purchaser, Lawsons Angus retained interests persist with the new owner.

Lawsons Angus retains exclusive cloning rights on all animals sold.

No animal may be cloned without written consent from Lawsons Angus.

RETAINING SEMEN INTERESTS IN SALE BULLS ENABLES LAWSONS ANGUS TO OFFER ACCESS TO OUR BEST BULLS AND ENABLES THE BULL OWNER TO JOINTLY SHARE IN ANY FUTURE SUCCESS IN MARKETING SEMEN.

Retaining a semen interest provides Lawsons Angus with the option to collect semen for our own use, but also to control the potential marketing of semen to the best effect through our network of contacts. Very few bulls ever sell a lot of semen, and in most cases it is later in life after progeny have proven the merit of the bull.

As we put a great deal of resources and intellect into developing each bull, and in some cases into sampling young bulls through AAA and co-operator programs, it is reasonable to participate in their future success in the form of semen sales and use in our own program so we can ensure we continue our program's genetic progress. With these points understood by our customers, we can offer for sale every bull we produce, and hold nothing back. It is important to note most seedstock herds retain their best bulls as stud sires, however the system we operate gives our clients direct access to our best bulls.

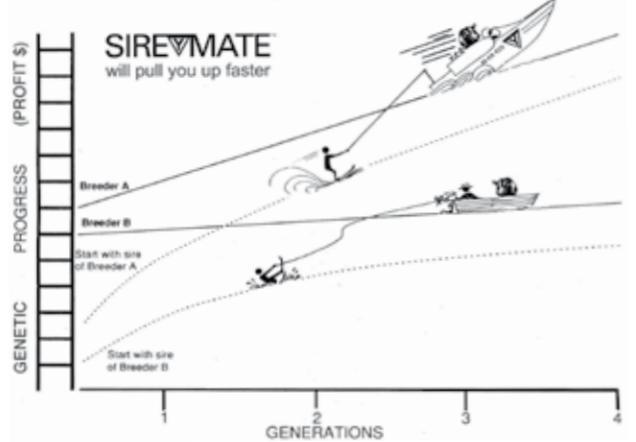

OUR 3 YEAR BULL GUARANTEE IS THE GREATEST WARRANTY PROVIDED BY ANY SEEDSTOCK HERD IN AUSTRALIA.

SIREMATE™ OPTIONS IN PRACTICE

LAWSONS ANGUS BREEDING PROGRAM IS BUILT ON MULTIPLYING THE BEST BULLS AVAILABLE IN THE WORLD. SIRE-MATE HELPS BREEDERS DEVELOP A SIMPLE, BUT STILL FLEXIBLE MATING PLAN THAT MINIMISES INBREEDING AND MAXIMISES GENETIC GAIN.

Retaining semen marketing rights and 50% revenue sharing interest.

Absolutely phenomenal growth curve, with massive carcass potential and a very moderate maturity pattern. K1317 represents the latest Gardiner Angus Ranch (GAR) genetics with new outcross sire GAR Anticipation and out of an Ayrvale BarTEL E7 two year old heifer. Ranked # 3 for Heavy Grain Index (top 1% of the breed), one of the highest EMA bulls in the Sale (top 1% of the breed) plus top 10% for 600 Day Growth and top 5% for marbling (IMF).

Retaining semen marketing rights and 50% revenue sharing interest.

An absolute 'ripper' of a bull with loads of horsepower but still very moderate. An interesting pedigree with Bartel E7 x Rennylea Edmund E11. K965 is ranked equal 4th highest bull in the Sale for Heavy Grain Index (top 1% of the breed), top 10% for 600 Day Growth, top 5% for EMA and IMF. Don't overlook this elite young sire.

Wow, look at the spread of numbers on K976, it really is quite remarkable to think where these bulls are and how consistent their numbers and phenotype are. K976 has a different pedigree with E7 x Sydgen Trust; we didn't have a lot of Trust progeny but they were impressive early growth and super disposition and structure. K976 is in the top 5% of the breed for Heavy Grain Index and EMA, top 10% for 600 Day Growth.

Holly smoke this Prophet son is a powerhouse and will take you two a whole new level, he was 760 kg in January and an incredibly deep bodied 'soggy' bull with big testicles (40cm). For the purists K975 does have some white in front of his muzzle. K975 is in the top 5% of the breed for Heavy Grain Index, top 10% for 600 Day Growth and IMF.

Another super impressive Prophet son, bred the same way out of a two year old Bartel daughter. These Bartel daughters are doing a great job in our herd, beautiful udders and neat moderate, easy fleshing cows. K967 is one of the highest growth bulls in the Sale. Top 10% of the breed for Heavy Grain Index and EMA, top 5% for 600 Day Growth and marbling (IMF). K967 does have some white just behind his muzzle.

A super impressive calving ease bull with high growth and below average Mature Cow Size. It does take some doing and discipline to get such a consistent line of bulls with powerful growth numbers, but still easy calving and moderate cow size; it's an even bigger challenge to build pedigrees with high marbling and muscle simultaneously, but as this catalogue demonstrates it can be done! Different maternal pedigree here with Tank B1155, K951 is in the top 5% of the breed for Heavy Grain Index and EMA.

The first of our Lawsons NZ 09104 sons to sell from our NZ partnership herd at Kakahu, South Island. NZ09104 is a Mytty in Focus son out of an imported Lawsons Angus Henry VIII x Future Direction dam. NZ 09104 was the top performance sire at Kakahu and is an exceptionally well balanced curve bender with lots of muscle and below average Mature Cow Weight.

He ticked all the boxes but unfortunately came up as a DD carrier. K959 is in the top 10% of the breed for Heavy Grain Index and 600 Day Growth, top 5% for EMA.

Different pedigree with Goodthing out of GAR Progress. Progress is the highest marbling bull in the US at +1.79 with 129 actual carcass records, so it is not surprising K964 ranks in top 5% of the breed for marbling.

Retaining semen marketing rights and 50% revenue sharing interest

Start of a new contemporary group, still out of two year old heifers. Look at the phenomenal numbers on this exciting young Prophet son. K958 is ranked equal 4th highest bull in the Sale for Heavy Grain Index (top 1% of the breed) and one of the highest growth, EMA and IMF bulls in the Sale (top 5% for 600 Day Growth, EMA and IMF).

This group of bulls are a bit lighter but don't confuse that with their genetic potential; that is why we need EBVs so we can accurately compare between management groups, farms, years and even between countries. If we went on looks the Kiwis would kill us, if we go on DNA and performance we kill the Kiwis! K956 is ranked # 2 for 600 Day Growth in the Sale and sits in the top 5% of the breed for Heavy Grain Index and 600 Day Growth along with his top 10% percentile ranking for marbling (IMF).

Wow, super impressive E7 x Edmund E11, powerful growth curve but still a neat moderate bull with exceptional carcass traits. K973 is in the top 5% of the breed for Heavy Grain Index and IM plus top 10% for 600 Day Growth.

Retaining semen marketing rights and 50% revenue sharing interest.

The E7 x Novak combination just works from every aspect from numbers and type. K997 is in the top 5% of the breed for Heavy Grain Index and marbling (IMF).

K1125 is in the top 5% of the breed for Heavy Grain Index, top 10% for 600 Day Growth, IMF and EMA.

These boys seriously do have some grunt, but will still keep your cow size within sensible boundaries. Large cows not only eat more but are the first to let you down with fertility under tough seasons and/or high stocking rates.

YEARLING BULLS

YEARLING BULLS

RS Lawsons Incredible H803 was the top selling bull in our 2014 Sale and is more than living up to expectations with his first group of progeny now yearlings. Incredible's calves are the standout progeny group in large numbers and tough contemporaries and is now a proven calving ease sire.

The start of our yearling bulls contemporary, you've had to wait a long time for these incredible sons but trust me it will be worth the wait. L189 is in the top 1% of the breed for Heavy Grain Index, top 5% for marbling (IMF).

We believe Lawsons Incredible H803 has the potential to be even greater than his record breaking sire, Ayrvale Bartel E7. L194 sits in the top 5% of the breed for Heavy Grain Index and marbling (IMF).

Incredible x Predestined oozes cow efficiency. L159 is in the top 5% of the breed for Heavy Grain Index and IMF, top 10% for EMA.

One of the highest marbling (IMF) bulls in the Sale and top 5% of the breed. Top 5% of the breed for Heavy Grain Index, top 10% for EMA.

Incredible absolutely blew his contemporary group away on grass and was just under 100kg heavier than the average of his group at 18 months of age and scanned through the roof for IMF and EMA. H803 has grown out to be a beautiful type and maturity pattern and is still super sound.

Lawsons Dinky-Di E447, dam of Lawsons Incredible H803, is an elite donor cow owned by Bevan Ravnhill, Severn Angus, Western Australia. Two full ET brothers to Incredible sell in our Albany Yearling Bull Sale on Friday 8th April 2016, which will also be interfaced with Auctions Plus.

Top 10% of the breed for Heavy Grain Index, top 5% for marbling (IMFP)

Top 15% of the breed for Heavy Grain Index. These yearling bulls were bred in Western Australia and are making the trip over the Nullabor shortly, hence we didn't manage to get any photos, but I can assure you they look fantastic.

Lots 135 and 136 are both Incredible x Predestined pedigrees. With E7, Dinky-Di and Predestined in the same pedigree these bulls are made to take breeders and cow efficiency to a new plateau. L170 is in the top 15% of the breed for Heavy Grain Index plus top 10% for EMA.

Good calving ease and well below breed average MCW.

Attractive bull visually. One of only two Te Mania 11 553 sons in the Sale. We purchased a semen share 11553 as he was one of the most promising low birth, easy calving Regent sons. 11553 is co-owned with Kakahu stud in New Zealand and doing a fine job, including a +9.4 EMA. K1329 is in the top 10% of the breed for EMA.

K6367 sits in the top 15% of the breed for Heavy Grain Index, top 10% for 600 Day Growth, top 5% for marbling (IMF). These last 19 ET bulls were reared at Calf Corp at Holbrook, NSW and part of our cooperator program with John Cleeland, King Isle Farms. John has spent a great deal of time picking out the cows that thrive under his King Island high stocking rates.

AI'd to GAR SURE FIRE on 23/12/2015

One of the highest ranked Sale females for Heavy Grain Fed Index and EMA (top 5% of the breed for both traits) plus NextG GRN Index prediction with GAR Sure Fire also ranks in the top 5% of the breed.

As Mark Gardiner's recent comments sum up GAR Sure Fire, "It's pretty exciting to have a calving ease sire with that much growth and carcass with super eye appeal and docility". Our first calf crop of Sure Fire has just been weaned and they look every bit as good as his numbers, very attractive cattle with lots of growth and muscle from what we are seeing in our large contemporaries. The docility coming from GAR New Design 5050 is also a big positive.

AI'd to PARINGA JUDD J5 on 23/12/2015

Sells as a PTIC commercial heifer.

THE 2016 SALE FEMALES ARE THE MOST ELITE GROUP OF ANGUS FEMALES TO EVER SELL IN AUSTRALIA. THEY INCLUDE 20 DAUGHTERS OF AYRVALE BARTEL E7. SALE FEMALES AVERAGE TOP 15% FOR GRN AND NEXTG GRN INDEX IS IN THE TOP 3% OF THE BREED. SALE FEMALES WILL SELL FROM \$2,000.

Twenty Ayrvale Bartel E7 daughters sell all PTIC to the best performance sires we could find. E7 progeny have been breaking records all over Australia with bulls averaging over \$10,000 in many sales late last year. Ayrvale Bartel E7's 16 steer progeny were the highest MSA Marbling score and highest ranked MSA Index sire in Cohort #2 of the Angus Sire Benchmarking Program involving 47 nominated Angus sires. These E7 steers had an average MSA Index of 67 and again a very high MSA Marbling score of 655. This carcass data has been entered into Breedplan along with E7's other ultrasound carcass scan data and he currently sits at +9.6 EMA and +3.7 IMF (top 1% of the breed) with >90% accuracy. These steers were fed at Rangers Valley on a 200+ day feeding program; it's interesting to note elite sires like E7 rise to the top in both short and long fed grain programs as well as on grass.

STRUCTURAL SCORING

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Whilst genetic improvement for consistency and quality of beef will continue to be pivotal in developing the Australian beef industry, we must not forget the fundamentals of livestock breeding.

The Beef Class Structural Assessment System was designed by the MLA, the BIA and several breed societies to address structural problems in the beef industry. Detailed analysis of three thousand genetically linked herds indicated that structural characteristics such as leg and foot structure were moderately to highly heritable. BEEFXCEL now services many seedstock operations in their selection and grading of stock using the Beef Class Structural Assessment System.

THE 2014 LAWSONS ANGUS SALE BULLS HAVE BEEN INDEPENDENTLY STRUCTURALLY ASSESSED BY JIM GREEN OF BEEFXCEL TO ENSURE THE QUALITY OF LIVESTOCK OFFERED.

HOW TO USE THE BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

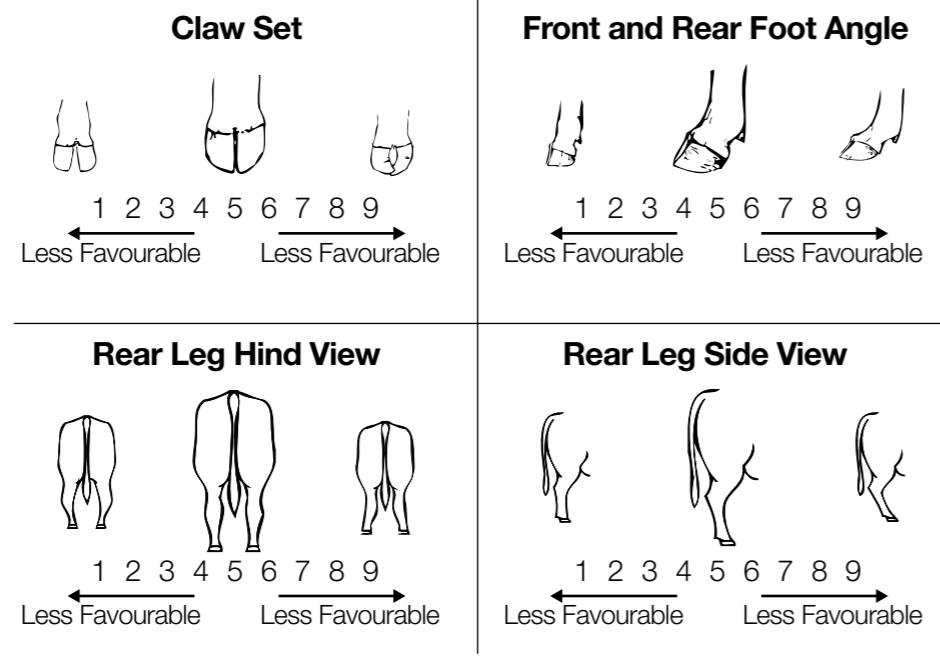

The Beef Class Structural Assessment System uses a 1–9 scoring system for feet and leg structure;

- A score of 5 is ideal. (Note: Temperament Score of 1 is preferable)
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of 2 or 8 are low scoring animals and should be looked closely before purchasing.
- A score of 1 or 9 should not be catalogued and are considered culs.

For more information contact Jim Green on 0402 003 137.

RECESSIVE GENETIC CONDITIONS INFORMATION FOR BULL BUYERS

This is information for bull buyers about the recessive genetic conditions, Arthrogryposis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

PUTTING UNDESIRABLE GENETIC RECESSIVE CONDITIONS IN PERSPECTIVE

All animals, including humans, carry single copies (alleles) of undesirable or "broken" genes. In single copy form, these undesirable alleles usually cause no harm to the individual. But when animals carry 2 copies of certain undesirable or "broken" alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or "broken" genes. Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

KEY POINT: With today's DNA tools undesirable genetic conditions can be managed!

WHAT ARE AM, NH, CA AND DD?

AM, NH, CA and DD are all recessive conditions caused by "broken" alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

KEY POINT: The number of reported observations of AM, NH, CA and DD calves is very low and there is certainly no need for panic.

HOW ARE THE CONDITIONS INHERITED?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition. For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as "carriers".

WHAT HAPPENS WHEN CARRIERS ARE MATED TO OTHER ANIMALS?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele), and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

KEY POINT: For the condition to be expressed the undesirable gene needs to be present on both sides of the pedigree and both the sire and dam need to be a carrier.

HOW IS THE GENETIC STATUS OF ANIMALS REPORTED?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

| | |
|--------------|--|
| AMF | Tested AM free |
| AMFU | Based on pedigree AM free – Animal has not been tested |
| AM__% | __% probability the animal is an AM carrier |
| AMC | Tested AM-Carrier |
| AMA | AM-Affected |

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an "Animal Search" from the Angus Australia website or looking up individual animals listed in a sale catalogue.

KEY POINT: The genetic status of an animal is subject to change and will be re-analysed and adjusted each week as DNA test results of relatives are received.

IMPLICATIONS FOR COMMERCIAL PRODUCERS

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia's Breed Development and Innovation Manager at (02) 6773 4602.

A BRIEF DESCRIPTION OF EBVS AND \$INDEX VALUES

The following is a brief description of EBVs and \$Index values and Accuracies. For a more detailed explanation please refer to the Angus Society of Australia web site (www.angusaustralia.com.au).

ACCURACY (%) ~ Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal (or its progeny, or relatives) then the accuracy of its EBVs for particular traits will increase.

CALVING EASE DIR (%)

Estimates of the genetic differences between animals in the ability of their calves, from 2 year old heifers, to be delivered without assistance.

CALVING EASE DTRS (%)
~ Estimates of the genetic differences between animals in the ability of their 2 year old daughters to calve without assistance.

GESTATION LENGTH (DAYS)
~ Estimates of the genetic differences between animals in the number of days from the date of conception to the calf birth date.

BIRTH WT (KG) ~ Estimates of the genetic differences between animals in calf birth weight.

200-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 200 days of age.

400-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 400 days of age.

600-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 600 days of age.

MATURE COW WEIGHT (KG)

~ Estimates of the genetic differences between animals in cow weight at 5 years of age.

MILK (KG) ~ Estimates of the genetic differences between animals in milk and animals in percentage retail beef yield, in a 300 kg carcase.

INTRA-MUSCULAR FAT % (IMF%)

~ Estimates of the genetic differences between animals in percentage intra-muscular fat (marbling) at the 12/13th rib site, in a 300 kg carcase.

LONG FED/ CAAB INDEX (\$)

~ The Angus Long Fed / CAAB Index estimates the genetic differences between animals in net profitability per cow joined. For example a high fertility self replacing commercial Angus herd in temperate Australia targeting pasture grown steers with a 270 day feedlot finishing period for the high quality, high marbled Japanese export market.

HEAVY GRASS FED STEER INDEX (\$)

~ The Angus Heavy Grass Fed Steer Index estimates the genetic differences between animals in net profitability per cow joined.

For example a self replacing commercial Angus herd in temperate Australia that sells heavy grass fed steers for markets like the EU and light grass fed Jap Ox.

SHORT FED DOMESTIC INDEX (\$)

~ The Angus Short Fed Domestic Index estimates the genetic differences between animals in net profitability per cow joined.

For example a high fertility self replacing commercial Angus herd selling feeder steers and heifers for the short fed domestic feedlot trade.

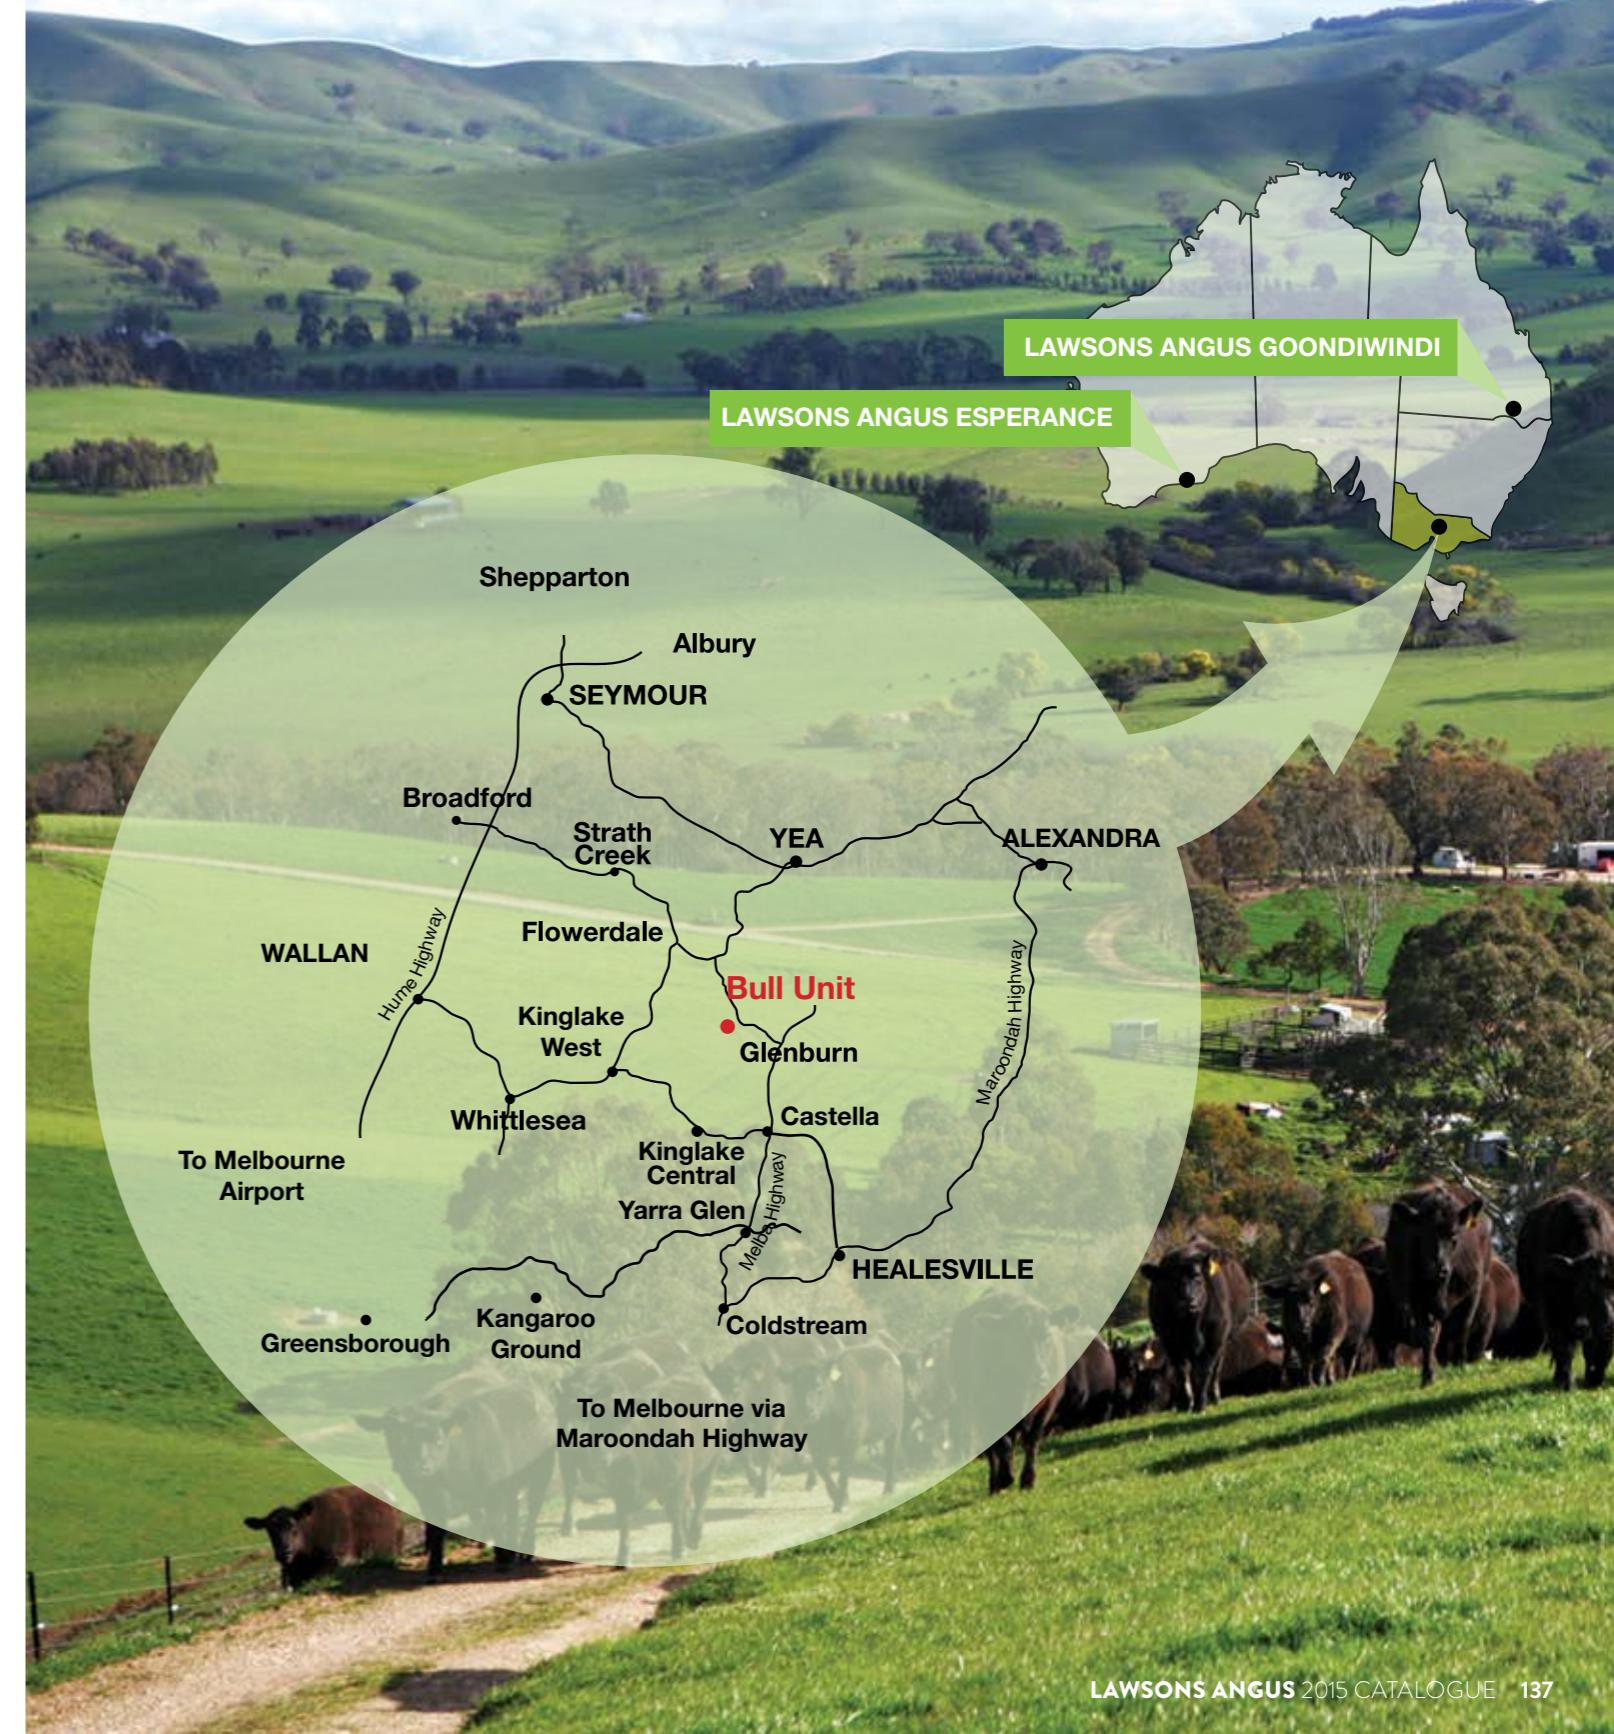

TERMINAL INDEX (\$)

Estimates of the genetic differences between animals in net profitability per cow joined. For example a commercial crossbred herd in northern Australia using Angus bulls over tropical adapted cows to produce terminal progeny to be grain fed for the Japanese B2 market.

For more information on Breedplan data, percentile bands, the use of \$ Indexes or a list of frequently asked questions on Breedplan please go to the Angus Society of Australia web site (www.angusaustralia.com.au)

LAWSONS ANGUS BULL UNIT

Lawsons Angus Bull Unit is situated 90 km north/east of Melbourne at 4175 Melba Highway, Glenburn. It is 24 km south of Yea, 29 km north of Yarra Glen and 3 km north of the Glenburn community hall.

EXPLORE THE YARRA VALLEY

We would like to assist in making your visit to our region as enjoyable as possible and there are many great places we recommend that you visit or stay. The following accommodation options and places to experience the fantastic food and wine of the region are all within easy reach of the Lawsons Angus Bull Unit at 4175 Melba Highway, Glenburn.

ACCOMMODATION:

- **Yea Peppercorn Hotel:**
03 5797 2000
Yea, historic hotel.
- **Tartan Motel:**
03 5797 2202
Yea, traditional country motel.
- **Yea Motel:**
03 5797 2660
Yea, traditional country motel.
- **Grand Hotel:**
03 9730 1230
Yarra Glen Main St, traditional country hotel.
- **Healesville Hotel:**
03 5962 4002
Healesville Main St, classic country hotel with great style.
- **Immerse:**
03 5965 2444
Dixons Creek, located in vineyard with spa.
- **Balgownie Estate:**
03 9730 0700
Dixons Creek, vineyard resort and spa.
- **Yarra Valley Estate:**
03 5965 2397
Dixons Creek, close to Bull Unit.

THANK YOU

TO ALL OUR CLIENTS WHO CONTINUE TO SUPPORT OUR PROGRAM, YOUR SUPPORT IS SINCERELY APPRECIATED.
