

Muscle Sale VII – Supplementary Sheet

For information contact Sale Agent Paul Phillips 0418553123 or sale co-ordinator Tim Keys 0418689146

EBV's have not been included in the catalogue as ABRI indicates that they are not reliable below 90% accuracy and this accuracy is not achieved until an animal has had several progeny recorded. For prospective purchasers wishing to refer to EBV data, the data is provided below.

Sale organisers understand some place importance on EBVs, however prefer to use visual appraisal and real data by the way of scanning results to assess cattle and through experience have found this to be a more reliable avenue of selecting quality seedstock. We highly recommend inspection of animals as it not only facilitates animal selection but also gives prospective purchasers an opportunity to meet the breeders and view the management practices and quality herds that animals have been selected from.
