GUBBINS OF COOLANA

Dear All,

Well doesn't a year go quickly and how things can change. You have probably heard by now that Anna and I have decided to sell our genetic businesses. Around our Autumn bull sale in 2017 we are dispersing all our Xsimm and Coolana Angus Stud females. This decision has been bought on by the great pleasure of having Max our youngest son joining us in agriculture. It is a succession decision decided by me to free the next generation up of as many encumbrance's that I have created in my time of control at Coolana and let Max and maybe Ben later, develop a business that they enjoy working in. Anna and I are not retiring or unhealthy just going to take a change of pace and enjoy life, while working alongside our son's.

Even though we are selling our females now we will continue to sell bulls until our current bull inventory is exhausted. This will culminate in September 2018. I truly hope that you will support us to the end. Coolana genetics will stay around in the industry and be recognized for many years to come. We will support our clients well into the future as we have done in the past. Rest assured that if we can't support you with replacement bulls, we will refund any money difference as per our generous guarantee to help you replace a bull that has failed.

Support us to the end and come to our final hoorah after our 2018 Spring Bull Sale.

Good luck in this prosperous year for beef. Enjoy and spend wisely.

We pride ourselves on our ability to provide an even line of bulls, so that a buyer purchasing either one or ten bulls at a time can expect consistent results.

Kind regards,

Mark

SALE DATES

28th February Simmental Female Dispersal 3.31 pm

1st March Angus Bull Sale 4.01 pm

2nd March, Angus Female Dispersal 9.59 am

3rd March, Angus Female Dispersal 9.29 am

COOLANA ANGUS

Inspection

Bulls will be penned and available for inspection from 12 Noon on sale day. An appointment to inspect bulls prior to sale day, may be made by phoning Mark or Max Gubbins.

Agent Rebate

A 3% rebate is offered to outside agents who meet the following condition:

- Accompany, assist and sign the buyer slip on behalf of your client.
- (No signature, No rebate)

For further information Phone Mark on 0428 593 913.

Airstrip

Coolana has a North/South, East/West grass airstrip that will be available on sale days. Not far from our selling complex. Airstrip coordinates Latitude -37.8827, Longitude 142.6664. Call Anna to arrange pickup. 0409 593 913.

Animal Health

Every endeavor is taken to eliminate any diseases and viruses that may affect bulls from breeding.

- Coolana Angus is accredited MN2 under the BJD market assurance program.
- ***All bulls have been vaccinated with Pestiguard, a 2-shot program to protect bulls from getting any symptoms during mating. It is highly recommended that a booster shot be given every year.
- All bulls have been ear notched and tested clear from being a Pestivirus PI (persistently infected).
- ***All bulls have been vaccinated against Vibriosis, 2 shot program to protect bulls from getting any symptoms during mating. It is highly recommended that a booster shot be given every year.
- It is recommended that when you put any bull with cows or heifers that you take a little time to closely observe the bull working and check he can complete natural service.

Genetic Faults

All bulls are Pedigree or Tested Free for the NH, AM & CA testable Genetic Faults.

Developmental Duplications or DD – this is a little different than the previous 3 Genetic Faults. Its mode of action is not as simplistic, and therefore needs a lot more understanding. There are normal looking tested affected animals in the breeding population.

The advice to the commercial industry from Mark Gubbins is “if you are seeing abnormalities in your cattle herd” only buy Pedigree or Tested Free cattle. Coolana has a 5-year plan to eradicate DD from its herd.

Delivery

Coolana Angus will personally deliver any bull(s) to your property by road, free of charge, anywhere in Victoria, South East of South Australia and Southern New South Wales - or other areas by negotiation. This will be carried out within two weeks post-sale - or by negotiation with the purchaser. Only one delivery location per purchaser applies. Any tolls and ferry charges are to be paid by the purchaser.

SATISFACTION GUARANTEE

We aim to get your cows in calf in a fast, short breeding season. If you suspect a problem with a bull you purchased from us, contact us AS SOON AS POSSIBLE and we will endeavour to help you to the best of our ability. We want you to be a satisfied repeat customer. Remember, it is in our best interests to support you. Please phone us - we have years of experience and are here to help.

The Guarantee

As most bull problems occur in the first mating, Coolana Angus offers you a Satisfaction Guarantee for the first mating after you purchase. We will guarantee bulls, from the date of purchase, against loss of fertility due to structural failure of the bull in their first joining. The guarantee does not cover accidents and events which have occurred under the new owner's management and husbandry. For example, corkscrew penis, or bad feet which cause severe lameness, is covered. Broken penis, prolapsed prepuce, broken legs etc. are not covered.

Sound management practices are expected (e.g. annual fertility testing, and checking that the bull is working while mating, are mandatory). The guarantee only covers the value of the bull, as stated below. To trigger the guarantee, phone Mark Gubbins or a Coolana representative, within 48 hours of the problem being noticed (failure to notify within this time voids the above guarantee). A veterinary certificate may be required - any associated cost is to be borne by the purchaser. All guarantees to start from day of delivery.

Purchasers are urged to extend their protection further by insuring their bull(s) for transit and full mortality risks for at least one year, being for death by accident and disease, and including the peril of loss of use by accident. This cover will be taken out at the buyer's expense, via the usual livestock insurance method.

ALL Coolana cattle have been assessed on the GTS Type/Structure system. All the cattle are considered acceptable for soundness and muscling. The GTS system has been broken up into two distinctive trait groups: descriptive traits, and structural soundness traits. Animals rating outside these scores should be considered culls, and not catalogued for sale.

Structure scoring is only intended as a guide for potential purchasers. It is not a guarantee of the lifetime structure soundness of an animal. Where possible the Beefclass equivalent has been put alongside the GTS score for comparison.

For the best help make us your first call.

ACCOMMODATION

CHATSWORTH HOUSE: 5 kms

Chatsworth House has 3 cottages and 3 apartments. All self catering for various numbers of people. Ideally located only 5 kms away.

Either goggle Chatsworth House functions or ring Lesley Jones on 0409 101 657

DUNKELD: 40 kms

Dunkeld is at the foot of the Grampians and a beautiful location within half an hour's drive from Coolana. It has numerous B&B's, self catering and hotel accommodation.

The Royal Mail Hotel; 03 5577 2241

Dunkeld Tourist Information Centre for all local accommodation; 03 5577 2558

HAMILTON: 60 km

Hamilton offers a number of services within an easy 4 turn, 40 minute drive into the Coolana's gate.

Hamilton Tourist Information Centre; 1800 807 056

The Botanical Motel; 03 5572 1855

The Bandicoote Motel; 03 5572 1688

The Grangeburn; 03 5572 5755

WARRNAMBOOL: 70KM

Warrnambool is for anyone who wants to smell the sea within an hour's drive of Coolana. With all services that one might need.

Warrnambool Tourist Information Centre; 03 5559 4620

Comfort Inn Western; 03 5561 5100

Best Western Olde Maritime; 03 5561 1415

Lady Bay Resort; 03 5562 1662

Mid City; 03 5562 3866

EBV'S: A QUICK AND EASY GUIDE

These should not be complicated, they are simply tools to help you estimate genetic differences between animals for a range of economic traits.

Breed average for calves born in 2013

Bwt. Birth Weight (kg)	+4.4	Based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.
Milk (kg)	+14	An estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.
200 Day Weight (kg)	+40	Calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.
400 Day Weight (kg)	+74	Calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.
600 Day Weight (kg)	+96	Calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.
GL. Gestation Length (Days)	-3.3	An estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.
SS. Scrotal Size (cm)	+1.6	Calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.
DC. Days to Calving (days)	-3.4	Indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicates a shorter interval from bull-in date to calving and therefore higher fertility.
DIR. Calving Ease Direct (%)	-0.2	Indicates the influence of the sire on calving ease in purebred females calving at two years of age. Higher, more positive, Calving Ease EBVs are more favourable.
DTRS. Calving Ease Dtrs (%)	+0.0	Indicates how easily that sire's daughters will calve at two years of age. Higher, more positive, Calving Ease (DTRS) EBVs are more favourable.
MCW. Mature Cow Weight (kg)	+86	Based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.
Cwt. Carcase Weight (kg)	+53	Based on abattoir carcase records and is an indicator of the genetic differences in carcase weight at the standard age of 650 days.
Rib Fat (mm)	-0.1	Calculated from measurements of subcutaneous fat depth at the 12/13-rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcase. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcase. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcase weight than will sires with higher EBVs.
Rump Fat (mm)	-0.1	
EMA Eye Muscle Area (sq cm)	+4.4	Calculated from measurements from live animal ultrasound scans and from abattoir carcase data, adjusted to a standard 300 kg carcase. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcase. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcase weight than will sires with lower EMA EBVs.
RBV%. Retail Beef Yield (%)	+0.4	Indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcase. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.
IMF%. Intramuscular Fat (%)	+1.4	Estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300 kg carcase. Calculated from IMF scanning Data. Depending on market targets, larger more positive values are generally more favourable. Positive values have a desired affect on eating Quality.
ABI Angus Breeding Index	+100	Estimates the genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. The Angus Breeding Index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.
DOM Domestic Index	+100	Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are assumed to be finished using either grass, grass supplemented by grain or grain (eg. 50 – 70 days) with steers slaughtered at 490 kg live weight (270 kg carcase weight with 12 mm P8 fat depth) at 16 months of age. Daughters are retained for breeding and therefore maternal traits are of importance. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.
Grain Heavy Grain Index	+100	Heavy Grain Index - estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 760 kg live weight (420 kg carcase weight with 30 mm P8 fat depth) at 24 months of age. Daughters are retained for breeding and therefore maternal traits are of importance. There is a significant premium for steers that exhibit superior marbling
Grass Heavy Grass Index	+100	Heavy Grass Index - estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 620 kg live weight (340 kg carcase weight with 12 mm P8 fat depth) at 22 months of age. Daughters are retained for breeding and therefore maternal traits are of importance. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.

EBV'S: A QUICK AND EASY GUIDE

EBV's

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed.

The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, ANGUS BREEDPLAN EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of functional animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcase merit and feed efficiency. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease.

Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

Accuracy range	Interpretation
less than 50%	EBV should be considered as a preliminary estimate. It could change substantially as more performance information becomes available.
50-74%	Medium accuracy, usually based on the animal's own records and pedigree. Still subject to substantial changes with more information, particularly when the performance of progeny are analysed.
75-90%	Medium - high accuracy and includes some progeny information. Becoming a more reliable indicator of the animal's value as a parent.
more than 90%	High accuracy estimate of the animal's true breeding value. It is unlikely that the EBV will change much with the addition of more progeny data.

As a rule, animals should be compared on EBVs regardless of accuracy. However, where two animals have similar EBVs the one with higher accuracy could be the safer choice, assuming other factors are equal.

Selection Indices

All selection index values have been derived using Breed Object technology. Selection index values are reported as an EBV, in units of net profit per cow joined (\$) for the given selection scenario.

GENETIC TYPE SUMMARY (GTS)

All Coolana cattle have been assessed on the GTS Type/Structure system. All the cattle are considered acceptable for soundness and muscling. The GTS system has been broken up into two distinctive trait groups, descriptive traits and structural soundness traits animals scoring outside these scores should be considered culls and not catalogued for sale

Structure scoring is only given to give potential purchasers a guide, it is not a guarantee of the lifetime structure soundness of an animal. Where possible the Beefclass equivalent has been put alongside the GTS score for comparison.

Descriptive Traits

Stature	Evaluation for Frame Size. A maturity pattern 25 is an average frame. This may be influenced by age of dam, particularly 1st calf heifers											
GTS Score	10	15	20	22	23	25	28	29	30	35	40	
Frame Score		3	4			5			6	7	8	
	Less than Average Frame				Average Frame				Greater than Average Frame			

Capacity	An animals evaluation combining depth of fore rib along with spring of rib and width of chest floor, as well as depth of flank. Score greater than 25 indicate larger capacity.											
GTS Score	10	15	20	22	23	25	28	29	30	35	40	
Beefclass		1	2			3			4	5		
	Less Than Average Capacity				Average Capacity				Greater Than Average Capacity			

Body length	Evaluation of body length from withers to pins. Scores greater than 25 indicate longer body length.											
GTS Score	10	15	20	22	23	25	28	29	30	35	40	
	Shorter Body Length				Average Body Length				Longer Body Length			

Muscle	Scores higher than 25 indicate above average muscle. More muscle equals more meat.											
GTS Score	10	15	20	22	23	25	28	29	30	35	40	
Traditional Score	D-	D+	C-			C+			B-	B+		
	Less Muscle				Average Muscle				Greater Muscle			

Doing Ability	Ability to lay fat relative to their peers under common management.											
GTS Score	10	15	20	22	23	25	28	29	30	35	40	
	Worse				Good				Better			

Structural Soundness Traits

Front feet	Feet are a crucial structural component of a sound animal. Although impossible to get perfect the closer to a score of 25 the better											
GTS Score	10	15	20	22	23	25	28	29	30	35	40	
Beefclass	9	8	7	6		5		4	3	2	1	
	Tending Scissor Claw				Ideal				Tending Open Clawed			

Back Feet												
GTS Score	10	15	20	22	23	25	28	29	30	35	40	
Beefclass	9	8	7	6		5		4	3	2	1	
	Tending Scissor Claw				Ideal				Tending Open Clawed			

Leg Angle	Leg angle relates to the longevity of an animal. Too straight and a bull can't serve successfully leading to breakdown or arthritis, Sickle hocked and walking is difficult leading to breakdown.											
GTS Score	10	15	20	22	23	25	28	29	30	35	40	
Beefclass	1	2	3	4		5		6	7	8	9	
	Tending Post Legged				Ideal				Tending Sickle Hocked			

Pasterns	If an animal does not stand correctly on its pasterns, uneven claw wear will result. This can lead to structural breakdown in the feet.											
GTS Score	10	15	20	22	23	25	28	29	30	35	40	
Beefclass	1	2	3	4		5		6	7	8	9	
					Ideal							

Sheath	To Loose and service is more difficult and can lead to injury.											
GTS Score		1	2	3	4	5						
Beefclass		1	2	3	4	5						
		Loose				Ideal						

Grade	The better the grade the better the animal										
GTS Score	1	2	3	4	5	6	7	8			
	Cull	Just	Average	Good	V Good	Top	Excellent	Stud Sire
